DATA SCIENCE, BIG DATA AND DATA ANALYTICS TECHNIQUE A COMPARATIVE STUDY ALONG WITH ITS APPLICATIONS

Mrs. Bharathi Anbarasan
Assistant Professor, Department of Computer Applications
Dr. N.G.P Arts and Science College, Coimbatore 48
bharathib@gmail.com
9364150055

Abstract

The Paper aims to promote and communicate advances in big data research by providing a fast and high quality forum for researchers, practitioners and policy makers from the very many different communities working on data science. To promote Data Science and interdisciplinary collaboration between fields, and to showcase the benefits of science. To promote Data Science and interdisciplinary collaboration between fields, and to showcase the benefits of science. To promote Data Science and interdisciplinary collaboration between fields, and to showcase the benefits of science. To promote Data Science and interdisciplinary collaboration between fields, and to showcase the benefits of science.

Keywords: Data Science, Data Analytics, Big Data

I. Introduction

Data is everywhere, the amount of digital data that exists is growing at a rapid rate and changing the way we live. Data is growing faster than ever before and over year, about 1.7 megabytes of new information will be created every second for every human being on the planet. Paper aims to give a brief idea on the emerging fields and also deals the difference between the Data Science, Big Data, and Data Analytics, based on what it is, where it is used is the really worth to know about.

A. Data Science:

Dealing with unstructured and structured data, Data Science is a field that comprises of everything that related to data cleansing, preparation, and analysis. Data Science is the combination of statistics, mathematics, programming, problem solving, capturing data in ingenious ways, the ability to look at things differently, and the activity of cleansing, preparing, and aligning the data. It is a simple techniques used to extract insights and information from data.

B. Big Data:

The definition of Big Data, given by Gartner is, "Big data is high-volume, and high-velocity and/or high-variety information assets that demand cost-effective, innovative forms of information processing that enable enhanced insight, decision making, and process automation". Big Data refers to humongous volumes of data that cannot be processed effectively with the traditional applications that exist. The processing of Big Data begins with the raw data that isn't aggregated and is most often impossible to store in the memory of a

single

computer.

A buzzword that is used to describe immense volumes of data, both unstructured and structures, Big Data inundates a business on a day-to-day basis. Big Data is something that can be used to analyze insights which can lead to better decision and strategic business moves.

C. Data Analytics:

Data Analytics the science of examining raw data with the purpose of drawing conclusion about that information. Data Analytics involves applying an algorithmic or mechanical process to derive insights. For example, running through a number of data sets to look for meaningful correlations between each other. It is used in a number of industries to allow the organizations and companies to make better decisions as well as verify and disprove existing theories or models.

II. Applications / Uses of Data Science

Using data science, companies have become intelligent enough to push & sell products as per customers purchasing power & interest. Data science is also used in Marketing, Finance, Human Resources, Health Care, Government Policies and every possible industry where data gets generated. Using data science, the marketing departments of companies decide which products are best for the selling and cross selling, based on the behavioral data from customers. In addition, predicting the value share of a customer, which customer is likely to churn, which customer should be pitched for high value product and many other questions can be easily answered by data science. Finance (Credit Risk, Fraud), Human Resources (which employees are most likely to leave, employees performance, decide

FINGER PRINT RECOGNITION SYSTEM USING ARTIFICIAL NEURAL NETWORK

V. Sridevi

Assistant Professor [SG], Department of Computer Applications

Dr. N.G.P. Arts and Science College, Coimbatore

Mail id : vissridevi@gmail.com

Abstract

An Artificial Neural Network (ANN) is an information processing paradigm that is inspired by the way biological nervous systems, such as the brain, process information. Neural network originated as a model of how the brain works. Neural networks have broad applicability to real world business problems and many industries. A review of neural network applications to problems in production and operations management is presented. Applications reviewed in this paper include finger print recognition. The use of fingerprint in biometric identification has been the most widely used authentication system. The uniqueness of the fingerprint for every human provides us with all we need for faultless identification. However, during the fingerprint scanning process, the image generated by the scanner may be slightly different during each scan. The idea is to apply back propagation algorithm on a multilayer perceptron during the training stage. One of the advantages of this technique is the use of a hidden layer which allows the network to make comparison by calculating probabilities on template which are invariant to translation and rotation.

Keywords— Back propagation, Bio-metric, Neural network, Multilayer Perceptron

1. Introduction

Human brain has many incredible characteristics such as massive parallelism, distributed representation and computation, learning ability, ability generalization ability adaptivity which seems simple but is ability, adaptivity, really complicated. It has been always a dream for computer scientist to create a computer which could solve complex perceptual problems this fast. ANN models was an effort to apply the same method as human brain uses to solve perceptual problems.

A. How the Human Brain Learns?

Much is still unknown about how the brain trains itself to process information, so theories abound. In the human brain, a typical neuron collects signals from others through a host of fine structures called dendrites. The neuron sends out spikes of electrical activity through a long, thin strand known as an axon, which splits into thousands of branches. At the end of each branch, a structure called a synapse converts the activity from the axon into electrical effects that inhibit or excite activity from the axon into electrical effects that inhibit or excite activity in the connected neurones. When a neuron receives excitatory input that is sufficiently large compared with its inhibitory input, it sends a spike of electrical activity down its axon. Learning occurs by changing the effectiveness of the synapses so that the influence of one neuron on another changes.

1.1 Components of Neurons

1.2 The synapse

B. From Human Neurones to Artificial Neurones

Neural network has an organization similar to that of a human brain and it is a network made up of processing elements called neurons. Neurons get data from the surrounding neurones, perform some computations, pass the results to other neurones. Connections between the neurones have weight associated with them. In neural network, the knowledge is stored in the network's interconnection weights in an implicit manner, learning takes place within the system and plays the most important role in the construction of an neural network system. The neural network system learns by determining the interconnection weights from a set of given data.

1.3 The neuron model

Learning in neural network can be supervised, unsupervised or based on a combined unsupervised-supervised training. In supervised learning, a set of data, called a training data set, is used to help the network in arriving at the appropriate weights. A

BRAIN TUMOR SEGMENTATION AND DETECTION USING FUZZY SET

A.Nirmala

Assistant Professor [SG], Department of Computer Applications
Dr. N.G.P. Arts and Science College, Coimbatore
E-Mail : nirmalabala30@gmail.com

Abstract

Medical imaging mainly manages and processes missing, ambiguous, complementary, redundant and distorted data and information has a strong structural character. In the field of biomedical image analysis fuzzy logic acts as a unified framework for representing and processing both numerical and symbolic information, as well as structural information constituted mainly by spatial relationships. Fuzzy logic has proved to yield promising results in image processing when little information about the image is available. Fully automated segmentation is still unsolved and existing semi-automated segmentation techniques demand significant user input. An edge-based segmentation approach using fuzzy logic can give the good results in the segmentation of brain structures in CT (computer tomography) images. Manual enhancement after segmentation of approximately round objects can be avoided by using postprocessing contour-sorting technique using fuzzy rules.

Keywords: Biomedical image processing, fuzzy systems, image segmentation, fuzzy rules.

1. INTRODUCTION

The basic goal in segmentation process is to partition an image into regions that are homogeneous in nature with respect to one or more characteristics. Segmentation is an important tool in medical image processing and it has been useful in many applications, such as detection of tumors, detection of the coronary border, surgical planning, measuring tumor volume and its volumetric response to therapy, classification of blood cells, detection of micro calcifications on mammograms, heart image extraction from cardiac cine angiograms, etc. In some applications, it may be useful to classify image pixels into regions, such as bones, muscles and blood vessels, while in others into regions, such as cancer, tissue deformities and multiple sclerosis lesions. In recent years, many algorithms have been proposed for brain MRI segmentation. The most popular methods are thresholding, region-growing and clustering. The full automated intensity-based algorithms have high sensitivity to various noise artifacts such as intra-tissue noise and inter-tissue intensity contrast reduction. Clustering is most popular approach for segmentation of brain MR images and typically performs better than the other methods. Clustering is one of the most useful tasks in data mining process for discovering groups and identifying interesting distributions and patterns in the underlying data. Clustering problem is about dividing or partitioning a given data set into groups (clusters) such that the data points in a cluster are more similar to each other than points in different clusters. For example, consider a retail database records containing items purchased by customers. A clustering procedure group the customers in such a way that customers with similar buying patterns are in the same cluster. Hence, the main concern in the clustering process is to reveal the organization of

patterns into —sensible groups, which allow discovering similarities and differences, as well as allowing us to derive useful conclusions about them. This idea of clustering is applicable in many fields such as life sciences, medical sciences and engineering. Clustering may be found under different names in different contexts, such as unsupervised learning (in pattern recognition), numerical taxonomy (in biology, ecology), typology (in social sciences) and partition (in graph theory). In the clustering process, there are no predefined classes and no examples that would show what kind of desirable relations should be valid among the data that is why it is perceived as an unsupervised process. On the other hand, classification is a procedure of assigning a data item to a predefined set of categories. Clustering produces initial categories in which values of a data set are classified during the classification process. Medical images play vital role to access patients for diagnosis and treatment. Image segmentation is the first step and the most critical tasks of image analysis. Its objective is that of extracting from an image via image segmentation. The computerization of medical image segmentation has found wide application in different areas such as diagnosis, treatment planning, and computer-integrated surgery. Even if computer aided tumor detection is been studied for last two decades, interpretation of MRI image is still a difficult task. Interpretation of this image is very sensitive and multiple radiologists review is needed for reducing probability of misdiagnosis.

2. Review of Techniques For Brain Segmentation

The purposes of this study an automated detection and segmentation techniques for the extraction of brain tumor region and separation of tumor on the MR image. This MR image helps to overcome the

WOMEN'S EMPOWERMENT OPPORTUNITIES IN INDIA

DR.P.REVATHI

Assistant Professor,

Department of Commerce Banking and Insurance,

INTRODUCTION

Women empowerment a much raised and discussed topic round the globe? But why is it necessary? Why we are trying to fill this gender gap? What is gender gap? Why are women not given that equality level and trust in the society! It is 21st century and women still have to run for their rights? If we ourselves could try to get the balance then there would be no need of this whole campaign for women empowerment.

A house maker can anytime be a corporate leader! And we have series of example in our country itself! Then why do we yet need this women empowerment concept? Well is this gender gap filled in all states? Are women in the country getting their deserved rights? And are they educated till the age boys are? Are they forced to get married at a young age? Well staying in urban areas we have forgotten this topic! But the reality check says that this topic needs much more attention than it is getting.

We remember Indira Gandhi, Mother Teresa, Lakshmi bai (Jhansi) Savitri bai phule and Sarojini Naidu? They were the ones that irrespective of their profession worked for the mankind and their work is yet appreciated by us. Why? Ever wondered? What will happen if we decide to educate all the women in the country? Well I think the country will finally be tagged as Developed instead of developing.

I bet if everyone in the country started thinking like The country's first Prime Minister, Pandit Jawaharlal Nehru who said "when women move forward the family moves, the villages moves and the nation moves" employment gives economic status to women, economic status gives way to social status and thereby empowerment" then no one can stop women to grow in our country and take the country along with it to new heights.

THE POSITION OF WOMEN IN INDIA

The position enjoyed by women in the Rig- Vedic period deteriorated in the later Vedic civilization. Women were denied the right to education and widow

Challenges and Opportunities of Indian Entrepreneurs While Starting New Business in India

Dr.P.Revathi

Abstract— When a businessman first starts his own venture, they are responsible for doing number of things from long working hours, and juggling between numerous projects to constantly coping up with new ideas. They are often considered as a one-man army. However, once you learn to overcome these challenges, you will be able to reap the rewards. Entrepreneur India interacted with few emerging entrepreneurs to find out the challenges faced during the course of their entrepreneurial journey till date. We are pointing down those challenges here to make your journey an easy ride.

Risk taking ability, Self-confidence, Decision making ability, Knowledge of coin growing as harvesting technology, Economic motivation, Market orientation, Risk factors, Soil and firm condition of experiences, Water resources, Water quality and volume, need to coin for all technical factors, Ability of co-ordination to coin related activities, Achievement, Motivation, etc. indicators which are all the behavior of entrepreneurs.

Economic structure is very dynamic and extremely competitive due to the rapid creation of new firms and the exit of 'old' stagnant and declining firms. Redefining entrepreneurship and innovation according to an entrepreneur and an innovator in today's world is totally different from what it was earlier. Organizations will face seven trends in the next decade as they fight to survive, grow and remain competitive.

Keywords— Indian Entrepreneurs, Social Capital, Bureaucracy, Risk Factors, etc.,

I. INTRODUCTION:

ENTREPRENEURSHIP is the practice of starting new organizations or revitalizing mature organizations, particularly new businesses generally in response to identified opportunities. Entrepreneurship is a creative human act involving the mobilization of resources from one level of productive use to a higher level of use. "It is the process by which the individual pursue opportunities

without regard to resources currently controlled." Entrepreneurship involves a willingness to take responsibility and ability to put mind to task and see it through from inception to completion. Another ingredient of entrepreneurship is seeing opportunities, while others see chaos, contradiction, and confusion. Essence of Entrepreneurship is going against time with maturity and serving as a change agent.

"An entrepreneur is one who always searches for change, responds to it and exploits it as an opportunity. Innovation is the basic tool of entrepreneurs, the means by which they exploit change as an opportunity for different business of service." -Peter Drucker

To put it very simply an entrepreneur is someone who perceives opportunity, organizes resources needed for exploiting that opportunity and exploits it. Laptops, mobile phone, Motor Bikes, Credit Cards, Courier Service, and Ready to eat Foods are all examples of entrepreneurial ideas that got converted into products or services.

II. EVOLUTION OF ENTREPRENEURSHIP

The evolution of the Indian entrepreneurship can be traced back to even as early as Rig-Veda, when metal handicrafts existed in the society. This would bring the point home that handicrafts entrepreneurship in India was as old as the human civilization itself, and was nurtured by the craftsman as a part of their duty towards the society.

Before India came into contact with west, people were organized in a particular type of economic and social system of the community. Then, the village community featured the economic scene in India. The Indian sooms were mostly religious and aloof from the general life of the country. The elaborated cast based division of workers consisted of farmers, artisans and religious priests. The majority of the artisans were treated as village servants.

- Disappearance of the Indian royal courts who patronized the crafts earlier.
- The lukewarm attitude of the British colonial govt. towards the Indian crafts.
- Imposition of heavy duties on the imports of the Indian goods in England.

Bio-Inspired Algorithms and Fuzzy Expert System in Regression Test Case Optimization: A Survey

T.R. Anand and Dr. B. Rosaline Jeetha

Abstract—Regression testing is done with full or partial selection of already executed test cases to ensure the existing functionalities works fine. This paper presents the various bio-inspired algorithms and fuzzy expert system involved in selection, minimization, and prioritization of test cases for the regression test process.

I. INTRODUCTION

SOFTWARE testing is software engineering process which involves in execution of a software component or system component to evaluate whether it meets the business requirements, responds correctly to all kinds of inputs, functions within an acceptable time, is sufficiently usable, can be installed and run in its intended environments, and etc.

Regression testing is a process that confirms a recent program or code change has not adversely affected the existing features. Regression Testing is required when there is a change in requirements and the code is modified according to the requirement, and/or when a new feature is added to the software, and/or when defects has been fixed. Full or partial selection of already executed test cases is re-executed to ensure the existing functionalities works fine.

II. TEST CASE PRIORITIZATION

Test Case Optimization implies the order of test case execution such that the rate of fault detection gets increased and the amount of time to perform regression is reduced through elimination of unnecessary test cases during regression runs. It also increases the rate of early fault detection and correction, find bugs early so they can be corrected early. It ensures the regression test that only tests those areas that have changed, and also optimize the computing resources, human resources.

III. OBJECTIVE

The objective of this work is to make a survey on various bio-inspired and fuzzy expert system used in the process of Regression Test case Optimization in terms of test case selection, minimization, and prioritization.

IV. RELATED WORKS

Bharti Suri and Shweta Singhal [1], 2016, presents a new improved modified technique based on Bee Colony Optimization and Genetic Algorithm that makes use of permutations/combinations to generate a new set of test cases. The developed technique has been proved superiority compared with the existing technique for test case selection using ACO. The 17 subject programs varies with a minimum of 28 to a maximum of 666 in terms of LOC, 5 to 10 in terms of number of faults, 3 to 37 in terms of test suite size, 15 to 468 in terms of total execution time of the test suite. The proposed technique was found increase over time constraint.

Shweta Singhal et al [2], 2016, compared the effectiveness of Ant Colony Optimization and Bee Colony Optimization techniques using several metrics namely Average Efficiency (AE) and Average Percentage of Test Suite Size Reduction (ASR), Percent Average Execution Time Reduction (AETR). Eight sample programs which varies with 31 to 666 in terms of LOC, 5 to 10 in terms of number of faults, 5 to 26 in terms of test suite size, 49.84 to 468 in terms of total test suite execution time have been used in the comparative study. The comparative study in stated that the Average Percentage of Test Suite Size Reduction was found to be almost similar for both ACO and BCO. Also the Percent Average Execution Time Reduction was found better for the BCO technique while Average Efficiency was found better for the BCO technique.

Bharti Suri and Shweta Singhal, 2011,[3] validated the test case prioritization using Ant Colony Optimization technique proposed by Singh et al, 2010 and implemented in the work done by Suri and Singhal. Seven C++ Programs; CollAdmission, HotelMgmt, triangle, quadratic, coast_of_pun, calculator and prev_day, and one java program railway_book have been considered for experimental analysis. Fault seeding technique has been used to generate five to ten modified versions and black box test cases for the programs. The LOC, number of versions and number of test cases of the subject programs varies in a range of 31 to 666, 5 to 10, and 5 to 26 respectively. The total test suite execution time of the subject programs ranges with 49.84 to 468 seconds. Their results show that the proposed test suite selection and prioritization approach reduces the size of test suite, the execution time has been considerably reduced, the correctness achieved has been very high for most of the test programs, and the faults were discovered earlier by the ordered test suite. All their observations implied that the ACO technique in prioritization

Cognitive Radio Networks: A Survey

M. Kannan and Dr. B. Rosiline Jeetha

Abstract—Cognitive Radio (CR) technology is developed to overcome the spectrum scarcity due to rapid development in wireless networks. Both licensed and unlicensed users can utilize the spectrum using this technology. Spectrum is allocated dynamically in cognitive radio networks that it increases the spectrum utilization. The unlicensed users can transmit in the vacant spectrum already assigned to licensed users with minimum level of interference. It senses the spectrum to find the vacant spectrum and choose the best spectrum which meets the required QoS of the unlicensed users. The unlicensed users leave the spectrum whenever the licensed users return. This paper tries to give a comprehensive description of cognitive radio and its functions such as spectrum sensing, spectrum decision, spectrum sharing and spectrum mobility.

Keywords—Cognitive Radio, Spectrum Sensing, Spectrum Decision, Spectrum Sharing, Spectrum Mobility.

I. INTRODUCTION

With the rapid development in communication applications the spectrum becomes more congested and also the need for data rate increased. Radio spectrum is a limited resource and the service is allocated by fixed spectrum assignment. So some frequencies are heavily used and other bands are weakly used. The number of devices utilizing the unlicensed spectrum is growing, which indicates the increase in spectrum demand. So spectrum scarcity is a major issue faced by wireless networks. In order to overcome this issue Dynamic spectrum access (DSA) is introduced, which improves the spectrum efficiency. In DSA the unlicensed systems are allowed to use the licensed bands without interfering the existing user. So the weakly used spectrum can be used by other users. Cognitive Radio (CR) uses dynamic spectrum allocation which provides higher bandwidth and efficient spectrum usage. CR enables to reuse the licensed spectrum in unlicensed manner i.e., it open the licensed bands to unlicensed users to use them without causing any interference to the licensed user. Radio sensing, self adaptation and dynamic spectrum sharing are the abilities of CR. Spectrum underutilization and spectrum scarcity can be mitigated by an efficient spectrum usage of CR.

CR network contains two types of users: primary user (PU) and secondary user (SU). Licensed users are PU. They have the higher priority to access the channel. SU are unlicensed user. They can access the spectrum only in the absence of the PU. The SU can use the channel without causing any interference to the PU. SU wants to leave the channel when the PU reappears. SU is also called as Cognitive Radio (CR)

user. CR users choose the vacant portion of the spectrum which can meet its QoS.

Paper is organized as follows: background concepts and functions of cognitive radio are overviewed in section II. In section III, various spectrum sensing techniques are explained and compared. Spectrum decision is briefed in section IV. Spectrum sharing classifications are described in section V and in section VI various spectrum mobility strategies are compared. Finally, the paper is concluded.

II. COGNITIVE RADIO

Cognitive radio is a radio which alters its transmission parameters according to the environment in which it operates. Cognitive radio is dynamic in nature. The main objective of CR is to choose the best spectrum. The CR user senses the spectrum in order to find the vacant one. The vacant spectrum is called as the spectrum holes or white space. CR user continues its transmission until the PU reappears otherwise it leaves the spectrum as illustrated in Fig. 1 [8]. The CR user should be aware about the interference level with the PU. For seamless transmission it moves to new vacant spectrum.

Fig. 1. Spectrum Hole Concept

The CR transceiver contains a Radio Frequency (RF) unit, analog to digital converter and baseband processing unit. RF unit and analog to digital converter together called as the RF front end. General CR transceiver is shown in Fig. 2 [2]. The RF front end amplifies the received signal and it converted to digital signal. Then the signal is modulated/demodulated and encoded/decoded at the base processing unit.

Fig.2. Cognitive Radio Transceiver

In vivo early malarial parasite suppression activity of *Syzygium jambos* from Western Ghats region, Coimbatore

Devakumar. J & Sudha.S.S

PG& Research Department of Microbiology, Dr.N.G.P.Arts and Science College, Coimbatore, Tamil Nadu, India.

Abstract

The unexplored region of Western Ghats region possess good therapeutic plants which are good natural source for too many diseases. The present study was aimed to investigate *in vivo* anti-malarial effect of different organic and aqueous leaf extract of *Syzygium jambos* from Western Ghats region against early malaria infections. In the Peter's four day test significant parasite suppression $97.72 \pm 0.88\%$ ($p < 0.001$) was observed in Chloroquine (CQ) reference group prolonging the mean survival time of animals for 32 days, whereas no parasite suppression in control group. An effective parasite suppression ($p < 0.01$) of $72.72 \pm 2.84\%$ and $61.36 \pm 0.33\%$ was identified in SJME and SJAE respectively at 600 mg/kg b.wt, whereas the SJCE exhibited $60.63 \pm 0.57\%$ chemosuppression accomplishing a statistical significance of $p < 0.05$. SJME, SJAE and SJCE prolonged the mean survival time of animal groups up to 24.3 ± 2.84 , 21 ± 0.57 and 20.6 ± 0.8 days respectively. Among the four extracts, SJME, SJAE and SJCE exhibit active antimalarial activity, except SJAE which discloses the dose dependent suppressive effect of chloroquine in early malarial infection. The present investigation establishes, *Syzygium jambos* plant leaf extracts were effective in assorted range of antiplasmodial activity and could be a potential source in antimalarial drug discovery.

Key words: Antiplasmodial activity, Chloroquine, Western Ghats, *Syzygium jambos*

Introduction

Malaria is one of the serious health problems worldwide. At present, around 3.2 billion people are at risk of malaria each year globally (WHO, 2005), with 2-3 million deaths occurring each year (Snow et al., 2005). In Africa, Malaria accounts for 10% of the total disease burden. Over 90% of deaths occur in sub-Sahara Africa (WHO, 2005). Each year an estimated 300 to 500 million clinical cases of malaria occur, making it one of the most common infectious diseases worldwide. 40% i.e 500 million

Abstract

Extended-spectrum β -lactamases (ESBLs) were first reported in 1983, and plasmid-mediated AmpC β -lactamases were reported in 1988. Typically, ESBLs are mutant, plasmid-mediated β -lactamases derived from older, broad-spectrum beta-lactamases (e.g., TEM-1, TEM-2, SHV-1), which have an extended substrate profile that permits hydrolysis of all cephalosporins, penicillins, and aztreonam. These enzymes are most commonly produced by *Klebsiella* spp. and *Escherichia coli* but may also occur in other gram-negative bacteria, including *Enterobacter*, *Salmonella*, *Proteus*, and *Citrobacter* spp. The study revealed high percentage of ESBL among *E. coli* and *Klebsiella pneumoniae*. From our study it is evident that isolates exhibiting reduced susceptibility to third generation cephalosporins should be subjected for ESBL test. Reduced use or limiting of third generation cephalosporin and infection control measures will end in minimal ESBL isolates from hospitals.

Key words: - Mutant, Susceptibility, Cephalosporin, Extended-spectrum, plasmid

Introduction

Early human populations were small communities with only occasional contact with other human groups. With this population structure, those pathogens that cause acute diseases, and that do not persist in their hosts, would have little chance surviving and spreading (Black 1975). For an infectious agent to maintain itself in a specific host population it must have a basic reproductive rate greater than one (Anderson & May 1992). Moreover changing human lifestyles may encourage free-living microbes to infect humans, e.g., Legionnaires disease where the bacterium comes from warm, aerated water in cooling systems, air conditioning and Jacuzzis that can be regarded as large artificial lungs.

Before the discovery of antibiotics in the 1930s, death was often an inevitable outcome of infection. Heralded by the discovery of sulfonamides in the mid-1930s, the introduction of penicillin in 1939 (Davies, 1994) was considered a miracle in the battle against infections. Penicillin, the first β -lactam employed to treat infectious diseases, inhibited bacteria that were resistant to the sulfonamides and produced fewer side-effects. It was unique in its ability to penetrate into dying tissues yet retaining its activities.

Abstract:

Soil is a crucial component of rural and urban environments and in both places, land management is the key to soil quality. In growing industries, discharge the waste water into the nature environment in without proper treatment. Its produce the environmental pollution. Chromium act as a harmful agent in polluting the soil. It will reduce the fertility of the agricultural lands and hence it reduces the crop yield. Based on the biodegradation, chromium in soil degraded by using microorganisms, they are isolated from chromium contaminated agricultural soil. This series of technical notes examines the urban activities that cause soil degradation. The aim of the present work is to give an overview of the heavy metal contaminant in agricultural soil and also the mechanism of removal of these toxic metals from the contaminated sources by the application of potential microbes.

Keywords: Soil texture, Heavy metals, hexavalent Chromium, MIC, E.aurantiacum, Presinovorans, B.alitudinis, B.flexus, B.cereus, E.coli, S.aureus, Biodegradation.

Introduction

Indian economy tannery industries occupy place of pride due to its higher potential for employment, export and growth. About 70% to 80% of processing occurs at small cottage – scale sectors. Export of leather goods has reclaimed new height of \$2.8 billion in 2007-08 comparing to 1965-66 which was \$65.5 million. To mitigate huge demand, rapid growth of tanneries took place around the nation. There are about 3000 major tanneries in India, which are mainly located at Kanpur (U.P.), Punjab, Maharashtra, Kolkata (W.B.) and Erode, Tirupur (Tamil Nadu) and these are discharging their improperly treated effluent in nearby water bodies causing collateral damages to aquatic ecosystem which contains heavy metals like cadmium, lead, zinc, cobalt and chromium. Among heavy metals, chromium is the major pollutant and is toxic to plants and animals around the environment [1]. Moreover, petroleum refining processes have also resulted in introduction of hexavalent chromium into soil, air and water [2].

Antibacterial activity and Mycelial growth inhibition of three different plants

Keerthana V and Sudha S.S.

Department of Microbiology, Dr. N.G.P Arts and Science College, Coimbatore -641048

Abstract

Three medicinal plants were selected, namely *Couroupita guianensis*, *Morinda tinctoria* and *Tabernaemontana divaricata* 'Flore Pleno' for its antimicrobial activity against 5 clinically isolated bacteria namely *Staphylococcus aureus*, *Proteus vulgaris*, *Streptococcus pyogenes*, *Escherichia coli* and *Klebsiella pneumoniae* and 5 clinically isolated fungi namely *Trichophyton rubrum*, *Candida albicans*, *Cryptococcus neoformans*, *Aspergillus niger* and *Penicillium chrysogenum*. The antibacterial activity of methanolic leaf extracts were determined by well diffusion method. Antifungal activity was determined by Seeded Agar technique. Among three plants, *Couroupita guianensis* methanolic leaf extract shows better Antibacterial activity. In Mycelial growth inhibition, all three plants possess complete mycelial growth inhibition against some tested fungi, but *Couroupita guianensis* leaf extract possess better inhibition against all tested fungi. So, from the study it was concluded that among three different plants, *Couroupita guianensis* methanolic leaf extract exhibit better antimicrobial activity.

Keywords: *Couroupita guianensis*, *Morinda tinctoria*, *Tabernaemontana divaricata*, and antimicrobial activity.

Introduction

Our nature has enriched with botanical wealth and a large number of diverse types of plants. Plants are an important source of medicines since ancient times and 70 % of the worldwide population still relies on traditional plant based medicine ⁽¹⁾ for primary health care. Plant based medicine are used for its better cultural acceptability, better compatibility with the human body and fewer side effects ⁽²⁾. The increase use of commercial antimicrobial drugs leads to the microbial resistance against antibiotics ⁽³⁾ and threatens public health by reducing the effectiveness of treatments and increases morbidity, mortality and health care costs ⁽⁴⁾. In addition to this problem, antibiotics are sometimes associated with adverse effects on the host including hypersensitivity, immune-suppression and allergic reactions ⁽⁵⁾. To overcome this situation a new and effective therapeutic agents has to be developed from medicinal plants ⁽⁶⁾. According to World Health Organization ⁽⁷⁾ medicinal plants would be the best source to obtain a

Abstract

Aim: Actinomycetes strains were isolated from different locations of Western Ghats, Tamil nadu to evaluate its antimicrobial activity against multiple-drug resistant stranded MTTC pathogens and clinical pathogens.

Method: Soil samples were collected from different slot habitats of Western Ghats. Collected samples were serially diluted and plated on starch caseinate agar and Actinomycetes isolation agar. The isolated colonies were obtained and screened for its primary and secondary antimicrobial activity against pathogenic bacteria.

Result: 155 strains were isolated from soil samples. After secondary screening, only 1(I-9) strains showed the maximum antimicrobial activity against clinical pathogens include 5 different strains of *Staphylococcus aureus* and activity against some standard strains includes *Staphylococcus aureus* (MTCC 96), *E.coli* (MTCC 443) and moderate activity against *E.coli*, *Salmonella sp* and *Pseudomonas sp*. These investigation evidently indicates that Western Ghats and nearby area were rich in potent source of bioactive metabolites from actinomycetes to conflict the multiple drug resistance issues in living systems.

Keywords: Actinomycetes, Western Ghats, Antimicrobial activity

Introduction

Actinomycetes are filamentous, aerobic, spore forming, multicellular and gram positive diverse group of heterotrophic prokaryotes forming hyphae at same stage of their growth hence referred to as filamentous prokaryotes. Which belong to the order actinomycetales. These actinomycetes are the strong antagonists microorganisms. They produce antibiotic substance which has antibacterial, antifungal, antitumor, antiprotozoic and antiviral properties. These actinomycetes are used as a biological tool for the production of antibiotic against the pathogenic organisms, these actinomycetes species varies based on the environmental, soil texture and type of vegetation. Actinomycetes are producing secondary metabolites which are acting as an antibiotic or biological control. Those metabolites are slow but can be long lasting, inexpensive, and harmless to living organisms and the ecosystem; it neither eliminates the pathogen nor the disease, but brings them into natural balance.¹ *Micromonospora sp*, *Actinomadura sp*, *streptoverticillium sp*, *Thermo actinomycetes sp* and *Streptomyces sp* produced an antibiotic and other active secondary metabolites in that around 80% of

Coimbatore, Tamilnadu.

Abstract

Marine algae are an inexhaustible source of natural compounds that produce enormous number of biologically active secondary metabolites. They are the important target for the drug and pharma industries because of the large number of bioactive compounds recently discovered from them. The aim of this study was to evaluate the antibacterial activities of extracts from seaweeds *Caulerpa toxifolia*, *Turbinaria ornata*, *Jania rubens*, *Caulerpa scalpelliformis* and *Enteromorpha flexuosa* collected from Mandapam coast, East coast of India. Pathogenic strains of *Staphylococcus aureus*, *Streptococcus pneumoniae*, *Enterococcus faecalis*, *Klebsiella pneumoniae*, *Proteus mirabilis*, *Escherichia coli*, *Candida albicans* and *Candida glabrata*.

The phytochemicals as Alkaloids, Tannis, Phenol, Resins, steroids, glycosides, Terpenoids, Carbohydrates present in the seaweeds were analyzed. The hexane extract of *Caulerpa toxifolia* shows higher activity against *Klebsiella pneumonia* when compared to control (ampicillin).

Key words: Seaweeds, Antimicrobial, Phytochemicals, Bioactive compounds, Marine, *Caulerpa toxifolia*.

Introduction

As more than 70% of the world's surface is enclosed by ocean with the wide ranging variety of marine organisms compact a rich source of natural products. Marine environments are wealthy source of biological and chemical diversity (Minh *et al.*, 2005). Seaweed is a macroscopic, multicellular, marine algae that lives near the seabed. The term includes some members of the red, brown and green algae. They are plentiful in intertidal, shallow, coastal inlets and backwoods and curl wherever the bedrock is accessible. They rise on rocks, dead corals, stones, sands, solid material and on new plants. Almost 841 species of marine algae are accessible.

They are brilliant source of bioactive combinations (carotenoids, dietary fibre protein, essential fatty acids, vitamins, minerals) that can be used in the treatment of human diseases or to

Abstract:

The aim of this study was to evaluate the antifungal activity of the aqueous extracts of four plant species *Calotropis gigantea*, *Eucalyptus globulis*, *Morinda tinctoria* and *Polyanthia longifolia* against phytopathogenic *Aspergillus niger* and *Fusarium oxysporum*. For the antifungal assay we used poisoned food technique and estimation of mycelial growthweight. In Poisoned food technique *Aspergillus niger* recorded high susceptibility with both *Polyanthia longifolia*, *Calotropis gigantea* which showed complete inhibition at 50 % concentration. *Polyanthia longifolia* showed maximum susceptibility on *Aspergillus niger*, which showed 80 % susceptibility. Growth of *Aspergillus niger* and *Fusarium oxysporum* terms of dry weight of mycelial mat on all plant extracts media decreased during the course of incubation in this study. Of four media tested in the study, *Polyanthia longifolia* showed the maximum inhibition of *Aspergillus niger* and *Fusarium oxysporum*.

Keywords: Plants extracts, Antifungal activity, *Aspergillus niger*, *Fusarium oxysporum*.

Introduction

Pathogenic fungi are the main infectious agents in plants, causing alterations during developmental stages including post-harvest. In fruit and vegetables, there is a wide variety of fungal genera causing quality problems related to aspect, nutritional value, organoleptic characteristics, and limited shelf life (Agrios, 2004). In addition, in some cases fungi are indirectly responsible for allergic or toxic disorders among consumers because of the production of mycotoxins or allergens. Generally, phytopathogenic fungi are controlled by synthetic fungicides; however, the use of these is increasingly restricted due to the harmful effects of

Abstract

Bacterial populations inhabiting pharmaceutical environment and water systems were investigated over a 30 days of sampling period. The systems analyzed were different production area grade and different water types including, raw water, treated water, drinking water, purified and Water-for-Injection (WFI). Samples of water were tested by membrane filtration and the samples cultured using R2A agar. Culture based methods and phenotypic identification methods were used to characterize the isolates. The research was undertaken to produce an in-depth study of the microbial load of pharmaceutical grade water systems as well as the environment. The results presented act as a benchmark for industrial and pharmaceutical microbiologists to review comparable systems against, to present a review of the typical cultivable microorganisms recoverable from pharmaceutical water systems and environment. Further susceptibility patterns of these isolates were studied towards clinically significant antibiotics such as meropenem, cloxacillin, amoxicillin, ampicillin, methicillin and cephalosporin. The mean value of antibiotic sensitivity pattern shows that ampicillin was found to be most inert antibiotic as it was ineffective against all isolates, whereas meropenem was found to be most promising antibiotic followed by cephalosporin, methicillin and cloxacillin.

Introduction

Pharmaceutical industry provides a lot of job opportunity to the people who reside in rural area as well as in urban area. Besides the consequence of imminent production of chemicals due to pharma industry through air, water and ground lifelines become questionable. The frequent monitoring of microbial life around the industry is necessary one and it will reveal the condition of environment. They act as early warning sensors to detect pollution level. The pharmaceutical industry is now facing new challenges in controlling and preventing environmental pollution as it is expanding. In various parts of the world, the relationship between the pharma industry and the destiny of environment has been a controversial one. Environmental monitoring describes the microbiological testing undertaken in order to detect changing trends of microbial counts and microflora growth within clean room or controlled environments. (Sandle, 2006).

Microorganisms regarded as an important bio resource of our environment because they can be obtained in large quantities using cultural techniques within a shortest possible time by established fermentation methods, and they produce a regular and abundant supply of the desired product. Because of the presence of microbes in all walks of human life, there is constant interaction between

Gravimetric and Electrochemical Study of Temperature Effect of PVA Grafted Terpolymer on Corrosion Inhibition of Mild Steel in Hydrochloric Acid

R. Geethanjali* S. Subhashini

Department of Chemistry, Avinashilingam University for Women, Coimbatore 641043, India

Abstract

A study was carried out to find the temperature effect on inhibition of mild steel dissolution using an acryl terpolymer: polyvinyl alcohol-g-poly(acrylic acid-vinyl sulfonate) in 1 M HCl. The corrosion inhibition studies were carried out at five different temperatures (303 K- 343 K) by AC and DC polarization method. In order to gain a detailed insight on the nature of adsorption of the terpolymer, several isotherms were fitted and the adsorption characteristics were approximated using Temkin isotherm using the surface coverage values obtained from weight loss and electrochemical method. Thermodynamic parameters of adsorption such as equilibrium constant, Gibb's free energy, adsorption heat and adsorption entropy were evaluated and discussed. The surface morphology of the mild steel before and after the adsorption of the inhibitors was confirmed by Atomic Force Microscopy. Various parameters that determine the kinetics of mild steel dissolution such as activation energy, enthalpy and entropy were also calculated.

1. Introduction

Corrosion of metals in acid at high temperatures is more aggressive, and hence quantitative understanding of the corrosion rates in such conditions would facilitate an accurate assessment of risk factors associated with it. Hydrochloric acid pickling is usually carried out at temperatures up to 60 °C and sulphuric acid pickling is carried out at temperatures up to 90 °C [1]. Several organic compounds have been reported for high temperature inhibition viewpoint. Various alternatives for toxic organic inhibitors include plant products, polymers and drugs. Water soluble polymers are widely used owing to its low cost, availability, simple design and synthesis procedures and reduced toxicity. Polymers were found to be effective inhibitors as they provide the following advantages [2]: A single polymeric molecule can displace several water molecules from the metal surface thereby providing effective

Abstract

The corrosion behaviour of mild steel in 1M HCl for the inhibiting action of various concentrations of Chitosan Schiff base was studied using the electrochemical polarization and impedance techniques. The electrochemical studies were carried out in naturally aerated 1M HCl solution containing inhibitors in different concentrations at various temperatures. The data obtained from both the techniques showed that the efficiency of the inhibitor increased with the increase in the inhibitor concentration. The results obtained reveal that Chitosan Schiff base performed effectively as a corrosion inhibitor. The kinetic and thermodynamic parameters for mild steel corrosion and inhibitor adsorption, respectively, were determined and discussed. The mechanism of inhibition was discussed in the light of the chemical structure of the inhibiting compound and their adsorption on steel surface. The adsorption of inhibitor molecules on the metal surface was confirmed by FTIR technique.

Functionalization of 1, 8-Naphthalimides- An approach towards air-stable *n*- type organic semiconductors

Srinita Sonalin, K. Sakthivel and S. Nagarajan*

Department of Chemistry, Central University of Tamil Nadu, Thiruvananthapuram – 610 005, India
snagarajan@cutn.ac.in

Abstract

Structurally assembled small organic molecules form the basic components required for the design of smart molecules in devices. Among all the acceptors reviewed, Naphthalimides (NI) are found to be promising motifs in the electronic applications as they are versatile enough to tune them to achieve efficient device performances. Naphthalimides have been extensively used in organic electronics such as organic light emitting diodes, organic thin film transistors, liquid crystal display and organic solar cells. In this work, new and stable 1, 8-naphthalimides with long conjugated groups and heterocyclic systems were synthesised. All the compounds were thoroughly characterized and studied for the structure property relationship. The synthesized naphthalimides were highly fluorescent and their estimated energy levels concluded as n-type organic semiconductors.

Abstract: Nowadays, most of the business intelligence focus on social media like facebook, twitter, blogs and online commercial websites like shopclues, pepperfry, flipkart, fabfurnish, testfreaks, amazon, greendust etc., to gather comments posted by the buyers in deciding about future demand, brand promotion, market segmentation and product penetration. In turn the buyers were also willing to post their comment about each of the products they buy through online. And these short reviews once refined and analyzed can help us to get a crystal clear opinion about the buyers' view which probably enhances the future buyers to make a buying decision based on spectacular features. This paper includes implementation on data acquisition, preprocessing, combinatory of lexicon and syntactic pattern mining approach (1) to find overall sentiment scores and correlate that score to that of feature score (2) to identify the most promising features of the product.

Index Terms—Sentiment Analysis, Natural Language Processing, Lexicon Domain

I. INTRODUCTION

Sentiment Analysis has become one of the major parts in research, because of its enduring applications in marketing company, as they keep on exploring about their products, to initiate brand promotion; market segmentation and in framing new business strategies. The public also overwhelmed with joyous to provide their opinion as comments, and that deserves as a brand promoting factor for upcoming buyers. The comments include most of the aspects of their emotions and feelings about the buying product and that act as a stimulating factor for raising the demand of it. Usually, consumers get overwhelmed with joy or feel disappointed, and they express them as micropinions on their mobile or tab. These comments are also posted on the reputed online websites which can further be scraped for undergoing analysis. Sentiment Analysis is playing an

reviews, opinion-based entity ranking and opinion retrieval. Among them, first three dimensions of subtask are highly demanded due to their rejuvenation in creating more business opportunities/intelligent system. Usually opinions are gathered in two ways. One is of questionnaires where the questions and its answer were relevant to finalize the score and predict the sentiment. But unstructured text is gathered as comments, from the reputed online social media. The analysis of these kinds of text usually ends with positive or negative score depending on the presence of opinion bearing and feature words in the whole document. Generally there are three levels of analysis, namely document, sentence and entity level. The real impact of analysis dealt with combinatorial analysis of sentence and entity level.

In the learning based technique, it is necessary to create a training model for classifying the document based on labeled examples. To the contrast, in lexicon based technique, it makes use of dictionary to perform entity level analysis. This method gives high precision and low recall. In addition to that, to the contrast of statistical, syntactic technique deliver better accuracy as they make use of syntactic patterns to detect the noun, adjective and verb and its combinations. The statistical technique concentrates more about TF, Chi-square, mutual information to select the words for in-depth analysis. So, this proposed paper incorporates the combination technique of lexicon, syntactic pattern mining to perform sentiment analysis.

The pattern mining technique restricts any pair of words, fulfilling the sequence defined by the rules. The rules are nothing but the features and opinion word pairs. Because all the noun terms cannot bear feature

Mapping of Oncology Research Output in India: A Scientometric Analysis

Metric Studies

¹Muthukrishnan, M and ²Dr. Senthilkumar, R

¹Research Scholar, Ph.D. (PT), Department of Library and Information Science,
Kongunadu Arts and Science College, Coimbatore.

²Librarian (SG) and Head of Research, Department of Library and Information Science,
Kongunadu Arts and Science College, Coimbatore.

Introduction

The analysis of cancer, called oncology, is the work of innumerable specialists and researchers around the globe whose discoveries in anatomy, physiology, the study of disease transmission, and other related fields made oncology what it is today. Technological development and the regularly expanding comprehension of cancer make this field a standout amongst the most quickly developing areas of current pharmaceutical. In this way, the present research has been undertaken to know the growth and development of publications in the field of oncology as indexed in Web of Science (WoS) database of Thomson–Reuters. The scientometric study has received satisfactory consideration in the recent years and it has been broadly connected to assess the research performance of the researchers and the development of different disciplines of science. Assist, Scientometric could be utilized as a part of the distinguishing proof of developing research territories. Here, the authors have made an attempt to using scientometric techniques and additionally the scientometrics mapping and visualization technique were also applied for data mapping on oncology literature published during the period 2005- 2015 and indexed in web of science database.

Objectives of the study

The foremost objectives of scientometric study are to identify and carry out the following factors and this study help researchers to understand the display of oncology research, and build up the further research direction.

- ✓ To show the Ranking of Contributors of Articles
- ✓ To study the most prolific authors.
- ✓ Visualization of countries, and institutions

Data and Methodology

The present assessment of Indian oncology research is based on the publications indexed by Web of Science (WoS) of the Thomson Reuters, the USA for the period 1989-2015. The data for the study were downloaded from the Web of Science in January 2015. WoS has been perceived as the logical and specialized literature indexing tool giving information on the most important areas in science and technology research, particularly about medicine. Moreover, as a reference database, WoS gives enough search fields, like the topic, timespan, author search, cited reference search, country, publication name, and document type, which are all essential for literature analysis, particularly for scientometric study. A total of 10,807 research publications was downloaded from 1989-2015. The downloaded records were enriched with different parameters like authors, title, years, and research institutions. Further the records analyzed by using Histcite and citespace software application.

BIBLIOMETRIC MAPPING OF "JOURNAL OF CLINICAL ONCOLOGY" DURING 2010-2014

Dr. R. Senthilkumar,

Librarian (SG) and Head, Research Department of Library and Information Science,
Kongunadu Arts and Science College, Coimbatore – 641029

M.Muthukrishnan

Research Scholar (Ph. D), Kongunadu Arts and Science College, Coimbatore – 641029

Abstract

This paper presents bibliometric mapping of 30711 articles published in JOURNAL OF CLINICAL ONCOLOGY (JCO) during 2010-2014. Source and citation data have been downloaded from the Web of Science (WoS) database of Thomson–Reuters. In this study, bibliometrics mapping method was used to analyze the data set the analysis covers various parameters like year wise publication, growth pattern, word frequency, ranking of authors, ranking of institution, document types etc., and Histogram analysis of the datasets has been performed using Histcite software. Furthermore Vosviewer software were utilized to analysis the articles for knowledge mapping.

KEYWORDS: Oncology, Scientific productivity, Bibliometric analysis, Scientometrics Analysis, Content analysis, Citation, Histcite, VOSviewer.

INTRODUCTION

The Journal of Clinical Oncology (JCO) serves its readers as the single most credible, authoritative resource for disseminating significant clinical oncology research. JCO strives to publish the highest quality articles dedicated to clinical research and JCO publishes original research, reviews and other material related to breast cancer, gastrointestinal cancer, hematologic malignancies, molecular oncology, lung cancer, genitourinary cancer, head and neck cancer, pediatric oncology, neurooncology, supportive care and quality of life issues, prevention, and phase I and clinical pharmacology. Its readership comprises practicing clinical oncologists, researchers, students, individuals in training, and allied health professionals throughout the world⁽¹⁾.

In this study, bibliometrics mapping technique was utilized to analyze the citation data. Bibliometrics is the scientific field that concerns with a quantitative analysis of books, articles, and other types of written communication⁽²⁾. Bibliometrics-mapping is a new and effective way to use visualization methods, showing meaningful results of raw (or normalized) scientific data. It can be a good technique to assist experts to improve their knowledge in a certain domain, and has been already applied to analysis of the safety related topics⁽³⁾.

In this study, the bibliometrics mapping technique were applied to all articles published in the Journal of Clinical Oncology in the period 2010–2014.

REVIEW OF LITERATURE

Various quantitative studies based on bibliometric and scientometric techniques has been utilized by many analysts to evaluate the research productivity of individuals, institutions, countries etc.

Citation Analysis of 'Journal of Thoracic Oncology' (2006-2015)

¹Senthilkumar, R (Dr.) and ²Muthukrishnan, M

¹Librarian (SG) and Head of Research, Department of Library and Information Science, Kongunadu Arts and Science College, Coimbatore – 641029

²Research Scholar (Ph. D), Department of Library and Information Science Kongunadu Arts and Science College, Coimbatore – 641029

Abstract

This study did a citation analysis of research publications of the Journal of Thoracic Oncology (JTO) during 2006-2015. The data was downloaded from Web of Science database. The analysis covers various parameters like year wise citation analysis, compound annual growth rate and Histogram analysis. Histcite software was used for generating chronological tables and Histogram analysis. A total of 13888 publications were studied. It is found that: Maximum number of articles (2567, 18.48 %) were published in 2011 and the least number of articles (186, 1.34 %) was published in 2006; the compound annual growth rate for the period of 10 years is 0.30%; The article number 894 written by the author Gold straw in 2007 has a local citation score (LCS) of 134 and global citation score (GCS) of 1374.

KEYWORDS: Citations, Compound Annual Growth Rate, Histcite, Oncology, local citation score, global citation score.

1. INTRODUCTION

Journal of Thoracic Oncology (JTO), the official Journal of the International Association for the Study of Lung Cancer, is the primary educational and informational publication for topics relevant to detection, prevention, diagnosis, and treatment of thoracic malignancies. JTO emphasizes a multidisciplinary approach, and includes original research (clinical trials and translational or basic research), reviews, and opinion pieces (JTO, 2016). The present study examined the citation analysis of research publications of the Journal of Thoracic Oncology (JTO) during the period 2006 - 2015.

2. LITERATURE REVIEW

Senthilkumar and Muthukrishnan (2016) presented a bibliometric analysis of 10681 articles published in Annals of Oncology during 2010-2014. Padme and Vaishali (2016) analyzed the articles published in the Indian Journal of Chemistry -Section A from 2010 to 2014. Singh et al. (2016) reviewed and analysed 833 research publications of the Panjab University in chemistry during eight years (2008-15). Visakhi et al. (2016) listed the highly cited publication output by IISERs in Chemistry during 2008-15. Velmurugan and Radhakrishnan (2016) presented the impact of Research Productivity on Nanotechnology in India. Navalur and Balasubramani (2015) analyzed the global research output in the field of E-learning during the period 2000-2011.

3. OBJECTIVES OF THE STUDY

The objectives of the study are:

- ✓ To find out the number of research papers published in the journal during 2006-2015 and the citation received by these articles during the period.
- ✓ To analysis the most important citation links and the growth rate of the publication using CARG

4. DATA ANALYSIS

A total of 13888 research publications were downloaded from the Web of Science (WoS) database of Thomson Reuters.

Rev. Dr. D. Thomas Alexander S.J., Principal
Rev. Dr. D. Thomas Alexander S.J., currently working as principal of St. Xavier's College of Education (Autonomous) has sixteen years of experience as teacher educator. Earlier he has served as the Director of Alumni Association of SXCE, Director of Fr. Utard Library and Director of Jesuit Council for Educational Research and Training before assuming the present position. He has also served as member of NAAC, University and Government inspection committees. He is instrumental in making SXCE as autonomous and the Second Best College of Education at the All India Level at Grade 'A' with 3.67 score out of 4. He has published more than 50 articles / papers as author / Co-author and he also edited monographs for 10 seminars. He was the Convener of many UGC sponsored Seminars and Workshops. He has been the most sought after Resource person for Seminars / Youth related Workshops / Camps / University Refresher Courses. His areas of interests are: Moulding the prospective youth / teachers in commitment, compassion and competence (as a different / unique teacher), personality development programme and Social Analysis.

Dr. T. Raja, Librarian, SXCE & Secretary, SALIS TVL Chapter
Dr. T. Raja has completed BLIS, MLIS from Annamalai University, M.Phil from Alagappa University and Ph.D from Bharathiyar University. He has also cleared the SET from Bharathiyar University. He has published 5 articles in reputed journals and 15 papers in the conference proceedings. He has attended 54 national and international conferences, seminars and workshops. He has also served as a resource person in the public library training programmes and handled the classes for the B.Ed Students of at St. Xavier's College of Education (Autonomous) where he is working at present and Tamil Nadu Open University. He has been conducting NET examination coaching programmes for the last 3 years and so far 76 LIS professionals have benefited and among them, two of them cleared the NET examination. He served as a Member of Editorial Board in SALIS National Journal of Information Management and Technology and International Journal of Information Technology and Library Science (IJITLS). He was received the AUTOLIB Tamil Nadu best young librarian award from the year 2013 and also received best paper award in the SALIS National Annual Conference on 2011.

Dr. K. Murugan, Librarian, UVOCE, AU, Thoothukudi & Chairman SALIS TVL Chapter
Dr. K. Murugan holds Ph.D in the Library and Information Science from Annamalai University. Having more than 18 years of experience, he has attended 70 Conferences/Seminars/Workshops. He has published 34 Articles in International Journals/Indian Journals/Book Chapters and 41 articles in International/National Proceedings. He is a member of Editorial boards of 11 International and 2 national Journals of Library and Information Science. He is a reviewer of the International journal of the Library and Information Science and an editor of one Conference Proceedings. He has published two books. He served as resource persons in many conferences and organized many programmes. He has received SALIS Autolib Tamil Nadu Young Best Librarian Award – 2015.

Dr. S. Dhanavandan, Asst. Librarian, Gandhigram Rural University, Dindigul
Dr. S. Dhanavandan has been serving as an active LIS professional since eighteen years. He has guided many Ph.D scholars. He has published more than 100 articles in National and International Journals. He has presented and published more than 120 papers in the National and International Conferences. He has authored more than 20 books in Library and Information Science. He has contributed 25 Chapters in edited books. He has attended more than 50 Seminars/Workshops and training programmes. He served as Chairperson and resource person in many workshops and conferences. He has organized five workshops. He has received Rs. 60,000/- cash award for the best article in 2015 and Rs. 27,500/- cash award for the best article in 2016 from Konkuk University, South Korea. He served as Resource Person in the International Workshop at Sri Lanka. He also serves as the Editor for few Library and Information Science journals.

A VISION OF ENDURING HUMANISM IN KUSHWANT SINGH'S *TRAIN TO PAKISTAN*

Mr. K. Sankar*

Kushwant Singh is a lawyer by training, his most enduring work has been done in the field of Sikh history and biography. His famous novel '*Train to Pakistan*' (1956) reveals many commendable notes. Here this paper aims to bring how Kushwant Singh deals humanism in this novel. Regarding on it, K R Srinvasa Iyengar said:

It is still small voice of sanity, the voice of reason, the voice of humanity. Once again he musters strength to say: 'What bravery is there in killing unarmed innocent people?' But the words of the boy strike fire.....

The proclaimed agnosticism of Kushwant Singh is just a facade and the criticism that he is a novelist without vision falls flat when his work on the trauma of partition is brought under a microscope. Beneath the sardonic facade is a man to whom humanism as particularly reiterated is Sikhism is an abiding faith and a symbol of true religiosity.

Some critics of Singh's writings have been very generous in their praise for him, while some others have not been so chivalrous. Those who have praised him have gone to the extent of calling him as an 'author of international repute', a 'born story-teller', while those criticising him have held the view that the 'qualities, which he has been hailed for, are either altogether absent in his work or have no relevance to his creative talent and the progress of his art'.

Shyam M. Asnani goes to the extent of conforming to the views of Chirantan Kulshrestha who in his article, 'Kushwant Singh's Fiction', has asserted that Singh is a novelist without vision. In his article he reasons:

Since his [Kushwant Singh's] creative literary output is meagre—a couple of novels and three collections of short stories—that too not of a very high order—one can hardly assail Mr. Kulshrestha's suspicion that the critics of Kushwant Singh seem to have been tempted to praise him for his possibilities and 'immense promise' without establishing any correlation with work he has actually produced so far.
