Experimental and theoretical perspectives on 2-amino 5-bromopyridinium salicylate: a third order nonlinear optical material

D. Prabha¹ · R. Karunathan² · V. Sathyanarayanamoorthi¹

Received: 7 January 2017 / Accepted: 7 March 2017
© Springer Science+Business Media New York 2017

Abstract Organic charge–transfer complex of 2-amino 5-bromopyridinium salicylate (2A5BPSPA) single crystals were grown by slow evaporation solution growth technique using methanol as a solvent. The phases and functional groups of 2A5BPSPA have been identified and confirmed through powder X-ray diffraction and Fourier transform infrared. The optical transmittance window and the lower cutoff wavelength of the 2A5BPSPA have been identified by UV–Vis–NIR studies. Dielectric studies were carried out for the grown crystals at various temperatures from the frequency ranging from 50 Hz to 5 MHz. Photoconductivity and microhardness studies were also performed for the 2A5BPSPA crystal sample. The nonlinear refractive index, nonlinear absorption coefficient have been measured through the Z-scan technique. In addition to that, the quantum chemical calculations on 2A5BPSPA have been performed by density functional theory calculations using Hartree–Fock method with HF/6-311++G basis set.

1 Introduction

A fascinating new field of research termed “nonlinear” optics was introduced to the scientific and engineering community after the invention of laser. Nonlinear optics has arisen as one of the most attractive fields of current research in view of its vital applications in areas of optical switching, optical data storage for the developing technologies in telecommunications, frequency mixing, optical parametric oscillation, optical bi-stability, optical logic gates, laser radiation protection, optical image processing, under water communication, biomedical and signal processing analysis optical modulation, second-harmonic generation (SHG), third-harmonic generation (THG) optical signal processing, optical switching, optical data storage devices, frequency shifting, optical modulation, optical switching, optical logic, and optical memory for the emerging technologies in areas such as telecommunications, signal processing and optical interconnections. It is also used in phase conjugation and image reconstruction etc [1–3]. It has been understood that the molecular nonlinearity can be enhanced by large delocalized π -electron systems with strong donor and acceptor groups. The π acceptor charge–transfer (CT) reactions have been employed positively in pharmaceutical investigation. Therefore CT complexes encouraged widespread research on these kinds of complexes [4, 5]. Moreover, the field of non-linear optical materials and electrical conductivities finds the application of such complexes. For these extensive applications, more works on charge-transfer complexes have been carried out. The CT complexes of organic materials are considered for the reason that the special type of interaction is accompanied by transfer of an electron from the donor to the acceptor. Similarly, the protonation of the donor from the acidic acceptors are basis for the construction of ion pair materials. Pyridine and its

Analysis of Energy Efficient Clustering Algorithms for Wireless Sensor Networks

T.S.Prabhu¹ Dr.V.Jaiganesh²

¹Research Scholar ²Professor (Post Graduate & Research)

^{1,2}Department of Computer Science

^{1,2}Dr.N.G.P. Arts and Science College, India

Abstract— Wireless sensor network (WSN) is a group of spatially distributed autonomous sensors, connected to a Wireless Sensor Node, which gathers data and commonly passes it through the network to a central location. The features of WSNs are quick expansion, self-organization as well as self-adaptation to the environment. It plays an essential role in our daily lives also it meets the requirements of numerous application areas like industrial, cultural, environmental. The energy efficiency of nodes and life time of network is becoming a general requirement for wireless sensor networks. Different clustering approaches are used to reducing energy dissipation in the network and optimize of sensor nodes for achieve successful communications among the nodes. This paper reviewed different energy efficient algorithms of clustering in WSNs.

Key words: Wireless Sensor Network, Distributed Clustering Algorithm, Hybrid Clustering Algorithm, LEACH, ULEACH, EEHMC

I. INTRODUCTION

Wireless sensor networks are collection of sensor nodes organized into a cooperative network. The nodes are communicated with each other by the wireless medium. From hundreds to thousands of nodes can be deployed in a network to sense the environment. All nodes work mutually and transmit data to base station [1]. Following figure illustrates the basic structure of WSN.

Fig. 1: Wireless Sensor Network

In many applications, sensor have to be grouped together to function automatically in the wireless sensor network for sustain high scalability as well as improved data aggregation. The sensor nodes are regularly grouped into individual, disjoint, non-overlapping subsets known as clusters [2]. Clustering is applied in WSNs to grant whole network scalability, efficient utilize of constrained resources which offers network topology stability with energy saving characteristics. Each cluster has a cluster head and cluster members in cluster based architecture. In each cluster, cluster members exchange the data with their respective cluster head and base station will collect data from cluster heads [3]. In this paper, a survey on clustering techniques and algorithms of wireless sensor networks are discussed.

II. CLUSTERING SYSTEM

Clustering system is one of the best approaches applied to save energy in WSN. Clustering is the process of arrange sensor nodes into various groups called clusters. In order to accomplish network scalability, the grouping of sensor nodes into clusters has been broadly followed by the research community. At each cluster, sensor nodes are plays different roles like cluster head, cluster member node. A cluster head is a group manager in every cluster that gathers sensed data from member nodes and transmits the aggregated data to the next clustering head and base station collects the finalized data from all cluster head [4]. The below figure demonstrates the clustering process in WSN.

Fig. 2: Clustering Process in WSN

The role of cluster member node is to sense data from the environment they deployed as well as send data to cluster head. Clustering method have to met the following requirements as [5].

1	Clustering is entirely distributed and every node alone makes its decisions based on local information.
2	Clustering terminates within a fixed number of iteration based on network diameter
3	At every cluster, each node is either a cluster head or a cluster member that belongs to exactly one cluster.
4	Clustering should be effective in terms of processing difficulty as well as message exchange.
5	Cluster heads are very well circulated over the sensor field.

III. CLUSTERING ALGORITHMS

This section presents and analyzes various clustering algorithms based on energy efficiency for WSNs. Clustering algorithms are developed and analyzed by several researchers for building scalable, robust and energy efficient applications in order to ensure efficient network operations. It can be classified as follows,

ABSTRACT

The expansion and development of the enterprises depends on adaption of technology up-gradation in the existing mechanism. The enterprises engaged in business can utilize credit facilities provided by banks for the growth of business. Despite the commercial banking activities exist in all the parts of our country, the Micro and Small Enterprises located in rural areas are still facing problems for inadequate supply of credit to improve their businesses. Banks provide credit to these enterprises after analyzing their creditworthiness as the main part of their lending process in spite of credit risk which is often faced by rural banks. The five components of Creditworthiness are the determinants for sanctioning credit and also discriminating elements according to situation that prevails in the concerned market. The credit system and procedure used by rural banks is to measure the Creditworthiness of micro & small enterprises. The system helps the bankers to weigh the characteristics of the borrowers and conditions of the loan, attempting to estimate the chance of default. The objectives of the study are to measure the commitment level and the constituents of creditworthiness through statistical tools. It is observed after analyzing the creditworthiness that Cognizance is required more to know about the banking procedures in availing credit. The enterprises which do volume of business normally have capacity to repay credit when we compare to other enterprises. No enterprise bothers about their credit-score which is most important to provide credit facilities by rural banks. The capital is maintained according to nature of business and the age of enterprise that exist in the market. In connection with collateral no enterprise is ready to give or pledge the collateral to the bank while borrowing credit for their development of business.

KEYWORDS: Creditworthiness, Enterprises, Borrowing, Commitment, Rural, Credit

INTRODUCTION

The entrepreneurs make to grow their business which leads to overall growth of the economy to the extent possible. Further expansion and development of the enterprises depends on adaption of technology up-gradation in the existing mechanism. The enlargement by the way of modifying the current production system or replacing old system will definitely require an additional amount of investment. The enterprises engaged in business can utilize credit facilities provided by banks for the growth of business. Banks keep on lending money to all the sectors of industry and especially to those engaged in businesses in the form of Micro and Small enterprises. The major revenues made by banks are through the interest generated by lending and the charges or fee they charge for providing banking facilities to

the business enterprises. Despite the commercial banking activities exist in all the parts of our country, the Micro and Small Enterprises located in rural areas are still facing problems for inadequate supply of credit to improve their businesses. Banks provide credit to these enterprises after analyzing their creditworthiness as the main part of their lending process in spite of credit risk which is often faced by rural banks.

MICRO & SMALL ENTERPRISES

The Government of India has been making intensive efforts for the promotion and development of micro & small enterprises which enabled to grow higher than the overall the growth of industrial sector. To facilitate the development of MSEs and increase their effectiveness, the government has enacted the Micro, Small and Medium Enterprises Development (MSMED) Act, 2006. One of the major policies

Abstract: Investment is the employment of funds on assets with the aim of earning income or capital appreciation. Investment is the most important things today. People are earning more, but they do not know where, when and how to invest it. A proper understanding of money, its value, the available avenues for investment, various financial institutions, the rate of return/risk etc., are essential to successfully manage one's finance for achieving life's goal. India is the best abode of investment opportunities both at micro and macro levels suitable to both urban and rural areas. The various efforts have been made by the Government and private individuals as well as institutions to encourage investment activities in identified areas in the interest of generation of output, income and employment opportunities. It is always noted point that the investment programme should be able to generate income as well as employment opportunities in the Indian Economy so as to eradicate poverty and hunger. In recent years one of the best efforts of the Government is initiation of Self-Help Group Programmed under rural development and poverty eradication programmes. Since woman is the equal partner and centre of development, she needs basic attention on her freedom and empowerment, socially, economically and politically. Effective Investment and mobilization of resources can be done in more fruitful way through the development of women-resource. For development of women-resource, there is need for global-friendly training to the women at large scale, particularly in rural areas.

Key Words: Investment, Indian Economy, Investment Opportunities.

Statement of Problem

In today's scenario investments have become a basic necessity for everyone. In India there is a rapid growth in investment. More number of investors is investing their funds in different types of investment opportunities. Investing wisely is a function if investors' specific needs and goals. Each investor has different objectives that need to be met depending on age, income and attitude towards risk. Investors have to work out with their investment profile to determine which investments are right for them and should consider important factors such as personal status, plans and constraints. Now a day the middle class segments investors select almost all kinds of investment avenues for their investment. They all improve the economic development of a country. Based on this conceptual understanding this study aims to analyse the investment pattern of middle class income families residing in Coimbatore city, Tamil Nadu.

CONSUMERS BUYING BEHAVIOUR TOWARDS ORGANIC FOODS IN COIMBATORE REGION

Dr.P.B.Banudevi, Professor and Head, Department of Commerce Finance
Dr.N.G.P. Arts and Science College (Autonomous) Coimbatore
Mr.G.Shiva Assistant Professor Department of Commerce Finance
Dr.SNS Rajalakshmi college of Arts and Science (Autonomous) Coimbatore

ABSTRACT

An awareness and demand of organic products are increasing in India. Organic foods are unprocessed food without artificial ingredients, preservatives or irradiation. The aim of this research paper is to know about the consumer attitude and buying behaviour towards organic food products. The consumer intense to purchase organic food is influenced by various factors such as purchase intention, acceptability, affordability, health consciousness, awareness and attitude. In this study 125 consumers are used in the survey for finding the buying behaviour of organic foods in Vellore city during the year 2017. Data is collected from various organic shops in coimbatore city.

Keywords: Organic Food Products, Consumers, Purchase, Attitude, Buying.

1. INTRODUCTION

Magnusson et al. (2003) found from research is human health, environmental friendly are predictors of purchase frequency. Torjusen et al. (2001) survey is organic food purchasers were more concerned with environmental, health issues. Magnusson et al. (2001) survey was conducted through mail, most respondents positive attitudes towards organic food products are good taste and more expensive, healthier than conventional products. Loureiro et al. (2001) survey is higher food safety, environmental concerns are increase the consumers' willingness to purchase the organic products. Tregear et al. (1994) survey is conducted through mail and telephone. Healthy, environmental friendly and better tasting than conventional food products. Jolly (1991) mail survey was conducted that found their research is food safety, freshness, health benefits, nutritional value, environmental effect, flavour and appearance of product are the factors considered choosing organic foods. Ragavan & Mageh (2013) found their research is that consumer perception towards organic products, product safety, environment friendliness and availability of product information are the major factors for purchase intention towards organic products.

Zeinabseyedsaleki et.al (2012) found their study is that consumers buying behaviour is influenced by organic knowledge, quality, price consciousness, subjective norms and familiarity on attitude. 150 consumers are responded in Iran. The survey is conducted through questionnaire with simple random method. All the factors are positive and significant except the subjective norms influence on organic buying behaviours. Ihsan effendi et.al (2015) the aim of the research is that taken from 270 respondents at several organic markets. Organic food knowledge, health knowledge and subjective norm variables are affected the consumer behaviour. Shashikiran & Madhavaiah (2014) found their research is conducted in Bangalore city from 150 consumers. 53% of the consumers were aware about organic products in the market. The study is focused on willingness to pay premium for organic food products. Consumers are ready to pay 20 – 30 % more for organic food products for belief on the safety and health aspect of the product. Zhou Lili & Chen Tong (2007) found their research is to gain knowledge and consumer attitudes towards organic food in Urumqi. The data was collected from 720 consumers by face – to – face survey. 44.9% of consumers had never heard of organic food. Consumers mostly considered the organic products are healthy, good quality and taste. Most of them are not very familiar with the supply of organic food products. So marketers to increase the awareness, advertise and knowledge of products. Some groups willing to pay higher prices for these food. So some marketing strategies should be targeted towards such groups. D. Anand & V.S. Palaniammal 37 Int. Res. J. Mgmt. Soc. Sci. Vol. 1(4), MarijaRadman (2005) the aim of the research is to gain knowledge about consumer attitudes toward organic products in Croatia. The data is collected by face – to – face from 179 consumers. Consumers are not familiar with the supply of products. Some consumers have more positive attitudes towards organic products. Marketing strategies for organic products should be targeted towards such groups. Sakthirama & Venkatram

Dr. SNS Rajalakshmi college of Arts and Science College (Autonomous)

ABSTRACT:

Green banking means promoting environment-friendly practices and reducing your carbon footprint from your banking activities. There has not been much initiative in this regard by the banks and other financial institutions in India though they play an active role in India's emerging economy, so it is suggested to initiate to promote green banking in India. The concept of green banking helps to create a cleaner and greener future as Green Banking has a direct impact on the environment. This paper has been made to study the level of consumer satisfaction and awareness regarding "Green banking services" initiative taken by various Private sector banks in India, Coimbatore. The study aims to identify the opinion and awareness of bank employees and customers as regards to green banking concept in private sector banks. It is necessary to identify various initiatives taken by the bank on the concept of green banking in order influence customer and make them user friendly.

Key words: Green Banking, Environment, Customer satisfaction

1. INTRODUCTION

The financial institutions influence the economic growth and development of the country both in terms of Quality and Quantity, thereby adopting various strategies for economic growth. As environmental issues gain greater attention, pressure is being placed on all industries, including financial institutions to implement Green Initiatives. Banking sector plays a crucial and decisive role in promoting environmentally sustainable and socially responsible investments as it

IMPACT OF CASHLESS ECONOMY ON COMMON MAN IN INDIA

Dr. P.B Banudevi

*Professor and Head Department of Commerce Finance
 Dr. N.G.P Arts and Science College (Autonomous)*

Mr. G.Shiva

*Assistant Professor Department of Commerce Finance
 Dr. SNS Rajalakshmi College of Arts and Science College (Autonomous)*

Abstract

The low literacy rates in rural India, along with the lack of infrastructure like internet access and power make things extremely difficult for people to adopt e-transaction route. The financial technology industry would be unwise to ignore the rise of mobile transaction services, person-to-person networks and the whole range of digital disruption in the payments arena from the likes of Bit coin, Apple Pay and PayPal that undoubtedly is putting pressure on cash. The present paper meets an attempt to know the awareness about smart phone and the use of smart phone in rural India. To overcome from the problem of cashless services providing in rural India.

Key words: *Cashless, Smart Phone, infrastructure, internet & networks etc.*

Introduction

Cash is like water a basic necessity without which survival is a challenge. Nevertheless, cash use doesn't seem to be waning all that much, with around 85% of global payments still made using cash. One of the main reasons is that there is nothing to truly compete with the flexibility of notes and coins. Of course, the digital era is something to embrace, and new methods of payments will continue to be introduced. But Indians need to recognize the risks and benefits of different payment instruments, the risks associated with electronic payment instruments are far more diverse and severe. Recently lakhs of debit card data were stolen by hackers; the ability of Indian financial institutions to protect the electronic currency came into question also an important reason why people favour cash. In a courageous move to combat black money and counterfeit currency, Narendra Modi's government scrapped currency notes of INR 500 and INR 1000 denominations, which is seen as an unprecedented measure, though a giant leap towards curbing corruption and forged currency. The declaration created confusion across the spectrum, as these high-value notes form around 86% of total legal tender. However, the whole isometrics of moving from cash-driven economy to cashless economy has somehow been assorted with demonetisation that was aimed to extract liquidity from the system to unearth black money. Prime Minister Narendra Modi acknowledged the fact in his monthly radio programme, 'Mann Ki Baat' on Sunday that making the transition to cashless economy is challenging, and hence has urged the public to move to 'lesscash' society. A report by Boston Consulting Group (BCG) and Google India revealed that last year around 75 per cent of transactions in India were cash-based, while in developed nations such as the US, Japan, France, Germany etc. it was around 20- 25 per cent. The depletion in cash due to demonetisation has pushed digital and etransactions to the forefront; e-banking, e-wallets, and other transaction apps becoming prevalent.

Abstract: In general, the web text documents are often structured, un-structured, or semi-structured format that is promptly growing everyday with massive amounts of data. The users provided with many tools for searching relevant information. Some of the searches include, Keyword searching, topic and subject browsing can help users to find relevant information quickly. In addition, Index search mechanisms allow the user to retrieve a set of relevant documents. Occasionally these search mechanisms are not sufficient. With the rapid development of Internet, amount of data available on the web regularly increased, which makes it difficult for humans to distinguish relevant information. A wrapper class is proposed to extract the relevant text information and focus on finding useful facts of knowledge from unstructured web documents using Google. Techniques from information retrieval (IR), information extraction (IE), and pattern recognition are explored.

Keywords: Information Extraction, Retrieval, Semantic Web, Web Search Engine

1. Introduction

Web mining is the use of data mining techniques to automatically discover and extract information from Web documents and services. Web content mining is the process of mining useful information from the contents of Web pages and Web documents, which are mostly text, images and audio / video files. Techniques used in this discipline have been heavily drawn from natural language processing (NLP) and information retrieval. Web structure mining is the process of analyzing the nodes and connection structure of a website through the use of graph theory. There are two things that can be obtained from this: the structure of a website in terms of how it is connected to other sites and the document structure of the website itself, as to how each page is connected. Web usage mining is the process of extracting patterns and information from server logs to gain insight on user activity including where the users are from, how many clicked what item on the site and the types of activities being done on the site.

At present, search engines are the primary gateways of information access on the Web. Today search engines are

becoming necessity of most of the people in day to day life for navigation on internet or for finding anything. Search engine answer millions of queries every day. Whatever comes in our mind just enter the keyword or combination of keywords to trigger the search and get relevant result in seconds without knowing the technology behind it. The search keyword is search engine it returns 36 million results. In addition with this, the engine returned some sponsored results across the side of the page, as well as some spelling suggestion in 0.36 seconds. And for popular queries the engine is even faster. To engineer a search engine is a challenging task. Web crawler is an essential part of search engine. A web crawler is a program that, given one or more seed URLs, downloads the web pages associated with these URLs, extracts any hyperlinks contained in them, and recursively continues to download the web pages identified by these hyperlinks. Web crawlers are an important component of web search engines, where they are used to collect the corpus of web pages indexed by the search engine. Moreover, they are used in many other applications that process large numbers of web pages, such as web data mining, comparison shopping engines, and so on.

Abstract-

This paper introduce a new graphics model for micro blogs to understand the mostly inference topics. The twitter deals with more than hundred billions of tweets per day, so it is not an easy task to find the recurrent topics. Twitter are the one of the leading social networking site where the people can share their arousing and opinion. The tweets are very petite text, noisy and unstructured. Tweets are constantly screening up with rich user-generated[1]. The constructs the semantic relationships to each other and also provides a way to connect the semantically related and co-occurred word. The proposed method Graph Based Similarity Measure (GBSM) define a topic model to avoid the sparseness of short text and noisy. This paper examines the problem of overlapping in nodes and edges of the Graph-Based Topic Model(HGTM).

Keywords: graph, Short text, Similarity Measure.

INTRODUCTION

Twitter is the most significant social networking service that spreads the information's worldwide. Twitter to be a rich and vast resource for data on the web. The content of the twitter should be well recognized because the people are using this as a platform to expose their reaction at instantaneous occasion. The text contents in tweets are diverse in nature, so it is necessary to predict the information which is frequently tagged. Most of the sentiment analysis is conducted on tweets with traditional algorithms. There are three key reasons to propose a new model :(i) the severe sparsity problem, (ii) models are designed for flat texts without structure,(iii)wide range of information conflicts with the assumption. The weakly-supervised information provided by s can build direct semantic relations between tweets so that the words in tweets have more complex topical relationships than in normal text.

RELATED WORKS

Notations and Definitions

A graph is an undirected graph, denoted as $G = (V, E)$, where nodes V are s from the dictionary $f(hg) = 1:H$ and edges $E = f(h, h')g$ are obtained from co-occurrence relations between s in the explicit relationship. The edge $e_{hh'}$ is weighted based on the association weight between h and h' .

BIOPROSPECTING OF MARINE SPONGE (*CALLYSPONGIA DIFFUSA*) FOR ANTIBACTERIAL COMPOUND

BINDU D¹, VINOTH KUMAR T¹, GEETHARAMANI D^{2*}

¹Department of Microbiology, School of Biological Sciences, CMS College of Science and Commerce, Coimbatore, TamilNadu, India. ²PG and Research Department of Microbiology, Dr. N. G. P. Arts and Science College, Coimbatore, TamilNadu, India. Email: geethavinoth@gmail.com

Received: 20 May 2017, Revised and Accepted: 05 October 2017

ABSTRACT

Objective: Marine sponges are a rich source of new antimicrobial drugs. The present study was aimed to evaluate the antibacterial activity of the marine sponge (*Callyspongia diffusa*) against human pathogenic bacteria and to analyze the presence of bioactive compounds in the sponge.

Methods: Antibacterial activity of the marine sponge *C. diffusa* was examined using petroleum ether, chloroform, n-butanol, methanol, ethanol, and water as solvents and tested against human pathogenic bacteria such as *Escherichia coli*, *Pseudomonas aeruginosa*, and *Staphylococcus aureus* by agar well diffusion method. Zoochemical analysis was performed to screen for the presence of secondary metabolites. Bioactive compounds were purified by thin layer chromatography (TLC) and were identified by gas chromatography-mass spectrometry (GC-MS) analysis.

Results: The results obtained show that the sponge extracts had significant antibacterial activity against the tested strains. The methanol extract was found to be the most effective and exhibited the highest potency against all pathogens tested. Zoochemical analysis revealed the presence of alkaloids, terpenoids, and sterols. In TLC, spots corresponding to a R_f value of 0.67 were found to possess antibacterial activity against the test bacteria. GC-MS chromatogram showed seven major peaks at retention time of 12.69, 13.81, 24.21, 24.65, 28.01, 28.93, 30.87 minutes. The mass of the compounds and fragments were matched with the National Institute of Standard and Technology (NIST) database for identification of probable compounds present in the sample. GC-MS analysis revealed the presence of bioactive compounds in the sponge.

Conclusion: This study confirms the marine natural species provides an excellent source of bioactive metabolites that can exploit to develop novel and potential therapeutic agents.

Keywords: *Callyspongia diffusa*, Solvent extraction, Antibacterial activity, Thin layer chromatography, Gas chromatography-mass spectrometry.

INTRODUCTION

Sponges belong to the phylum *Porifera*, and they are ancient metazoans that have existed since 700-800 million years. They are abundantly present not only in the tropical oceans but also occur in temperate waters and even in fresh water [1]. They are simple multicellular invertebrates, and they are attached to solid substrates in benthic habitats [2]. The sponges are of three classes, namely, the Calcarea (5 orders and 24 families), Demospongiae (15 orders and 92 families), and Hexactinellida (6 orders and 20 families). About 15,000 species of sponges have been described so far [3].

Marine sponges are rich sources of pharmacological compounds [4]. Studies show that secondary metabolites of sponges play an important role in their survival in the marine water [5,6]. These secondary metabolites have interesting biomedical, pharmaceutical, and biotechnological applications [7]. These bioactive compounds are attributed to their antimicrobial, antiviral, antitumor, and general cytotoxic properties [8]. *Porifera* is the most important phylum, as it provides a number of natural products, especially novel pharmacologically active compounds [9].

Bioactive compounds from marine sponges have extensive application for the treatment of many diseases. Several molecules isolated from various sponges are involved in the advanced stage of clinical trials. In this study, we tested the organic extracts of marine sponge (*Callyspongia* sp.) for antibacterial activity against three strains of pathogenic bacteria followed by gas chromatography-mass spectrometry (GC-MS) analysis to separate and identify the major chemical compounds present in the sample.

MATERIALS AND METHODS

Collection of marine sponge

The sponge was collected from the Krusadai Island, Gulf of Mannar, Ramanathapuram District, Tamil Nadu, India. It is 3 km from Pamban and 500 m from Kundugal point (Lat 9°15'00" N, Long 79°13'25"E). Sponges were collected by scuba diving at a depth of 5-10 m. A part of the specimen has been deposited in the Microbiology Research laboratory of Dr. N. G. P. Arts and Science College for records.

Identification of sponge

The sponge was identified as *Callyspongia diffusa* by Dr. R. Saravanan, Scientist, Central Marine Fisheries Research Institute, Mandapam Coast based on the skeletal characteristics (size and shape of the spicules), and external morphology. The color of its exterior was yellowish to purplish. Its body has small protrusions, cavities, and branches.

- Kingdom: Animalia
- Phylum: *Porifera*
- Class: Demospongiae
- Order: Haplosclerida
- Family: Callyspongiidae
- Genus: *Callyspongia*
- Species: *C. diffusa*
- Generic name: Sponges
- Common name: Callyspongid sponge

Extraction of bioactive compounds from sponge

The sponge was rinsed thoroughly with sterile seawater to remove algae or if any bacteria present on the surface of the sponge. The sponge was then cut into small pieces of about 5 cm and then homogenized

In vitro antifungal activity of *Pterocarpus marsupium* used among tribal communities of Western Ghats, Coimbatore, Tamil Nadu

Rangasamy Dhanabalan^{1*}, Subbu Balachandar¹, Joseph Devakumar²

ABSTRACT

Background: To investigate the *in vitro* antifungal activity of *Pterocarpus marsupium* leaf extracts used in folklore treatments among tribal community in the Western Ghats of Coimbatore district. **Methods:** The crude aqueous and organic solvent leaf extracts extracted by cold maceration method were subjected to antifungal activity against *Aspergillus flavus* and *Aspergillus fumigatus* by agar plate dilution method. **Results:** The methanol and ethanol leaf extracts of *P. marsupium* showed significant ($P < 0.01$) antifungal activity against *A. flavus* at a minimum inhibitory concentration of 31 µg/mL with IC₅₀ values 114.04 and 169 µg/mL, respectively. Similar antifungal activity of 100% inhibition was exhibited by alcoholic leaf extracts against *A. fumigatus*. Besides, the chloroform leaf extracts showed 82.94% and 80.58% fungistatic activity against *A. fumigatus* and *A. flavus*, respectively. Comparable antifungal activity was also observed in other concentrations of alcoholic and chloroform extracts of *P. marsupium* against *A. flavus* and *A. fumigatus*. The aqueous leaf extract did not show demonstrable antifungal activity against the two fungal strains used in the assay which was not up to the score. **Conclusion:** The methanolic and ethanolic leaf extracts of selected plants were more active against tested fungal strains when compared to the chloroform and aqueous extracts. Further investigations are mandatory to identify the antifungal compounds present in the chosen herb.

KEY WORDS: Antifungal, aspergillosis, bronchopulmonary, folklore, mycosis

INTRODUCTION

Dissemination of fungal spores is a major problem in the spread of spore derived allergic pulmonary diseases. In temperate and tropical climates *Aspergilli* are well-recognized causes of allergic bronchopulmonary infections. Aspergillosis has been recorded in India, regularly in tropical areas with the development of fungus ball and pulmonary cavitation in patients, causing severe hemoptysis secondary to tuberculosis.^[1] A type of aspergillosis called Farmer's Lung infection is a housing of mold spores in pulmonary cavities among paddy field agrarians involved in farming practices. Farmworkers in Narasipuram, Semmedu, and areas near Velliangiri foothills (Poondi) of the Western Ghats, Coimbatore, are the chief cultivators of grains and sugarcane.^[2] The husk, hay, and other grain debris are the major growth

substrates of *Aspergillus* species, and frequent exposers of these field workers during harvesting of crops is frequently prone to farmer's lung Aspergillosis infection. Treatment of such fungal infections should be considered with utmost consequence due to the emergence of antifungal resistance, if untreated which may be chronic leading to morbidity and sometimes fatal among the community.

As fungal infections with multidrug resistance have posed a great problem in tropics and the availability of antifungal is lesser compared to antibacterial agents, a search of alternative antifungal agents is a mandate with null side effects. Phototherapy is an arena practiced among the folklore traditional healers for various diseases and disorders. From time immemorial, traditionally phytotherapy information has been conceded as oral communication from generation to generation. Among secondary metabolites from herbal sources plant polyphenolics, essential oils, terpenoids, saponins, alkaloids, peptides, and proteins were evidenced to be natural antifungal compounds

Biocontrol of *Aspergillus* root rot by tripartite symbiosis in groundnut

Ramachandran AM¹ and David Ravindran A²

¹Assistant Professor, Dept. of Microbiology, Dr NGP Arts and Science College, Coimbatore, Tamilnadu, India. Email-ramachandran@drngpasc.ac.in

²Professor and Head, Dept of Biology, GRI-Deemed University, Gandhigram, Dindugal, Tamilnadu, India.

Abstract

Aspergillus niger is responsible for causing root rot of groundnut. Ten *A. niger* isolates were isolated and studied in the groundnut cultivated area of Madurai. Groundnut was challenged with *Aspergillus*, and the production of pectinase and cellulase enzymes was investigated to assess the virulence of the fungal isolates. Among the ten isolates *A. niger* CLR10 produced highest percentage (40%) of diseased plants. Based on the production of these enzymes in groundnut plants challenged with the pathogen *A. niger* CLR10 produced highest level of these enzymes so it was used for further studies. The treatment AT₁₃ recorded minimum percentage mortality (15.9%) and the pathogen only inoculated control recorded 100% mortality. Application of AMF with rhizobial isolates decreased the mortality in groundnut. The biocontrol studies revealed that the combined inoculation of AMF and *Rhizobium* sp. reduced the pathogenesis of *A. niger* CLR10. However, the treatment AT₁₃ recorded significantly ($p < 0.05$ and 0.01) higher growth parameters than other treatments. The investigation suggested that inoculation of *Glomus mosseae* and *Gigaspora albida* along with *Rhizobium* sp. GPMK1 and GMDU1 can improve not only the growth but also render disease resistance to groundnut. It can be summarized that the practice of multiple inoculation is found more effective as compared to the traditional practice of single inoculation of inoculums.

Keywords: Root rot, *Aspergillus* sp., Groundnut, *Rhizobium* sp., Biocontrol, Mycorrhiza.

Introduction

Groundnut is one of the major oilseed crops in India. It is cultivated under diversified agro climatic conditions in about 6.6 million hectare producing about 5.9 million tons (FAO, 2005). The yield is influenced by soil fertility, climatic condition, varieties grown, cultural practices, insect pests & diseases and environmental stresses.

In the early 1980s groundnut was grown in Uttar Pradesh on 0.3 million ha with a production of 0.19 million tons. Since then, both area and production have shown a steady decline due to various reasons. Groundnut is an exhaustive crop and depending upon

the yield, it removes large amount of macro and micronutrients (Singh *et al.*, 2008). Unfortunately, the groundnut production is hampered due to attack by different diseases. These include bacterial, fungal, nematode and viral diseases (Subrahmanyam *et al.*, 1980). Rot diseases are mostly fungal disease, which are soil and seed borne. These cause disintegration of fruit and seed tissues and are covered with yellow or green spores. Fungal strains of *Aspergillus flavus* produce highly toxic aflatoxin. About 360 species of arthropod pests attack groundnut before harvest and cause direct damage as well as act as fungal and viral vectors (ICRISAT, 1987).

BIOMIMETIC SYNTHESIS, CHARACTERIZATION AND EVALUATION OF ANTIOXIDANT, ANTIMICROBIAL EFFICACY OF SILVER NANOPARTICLES USING *ANREDERA CORDIFOLIA* LEAF EXTRACT

RAJATHI K^{1*}, SUJA S²

¹PG and Research Department of Biochemistry, Dr. N. G. P Arts and Science College, Coimbatore, Tamil Nadu, India. ²Department of Biochemistry, Bharathiar University, Coimbatore, Tamil Nadu, India. Email: Rajathingp@gmail.com

Received: 28 December 2016, Revised and Accepted: 19 January 2017

ABSTRACT

Objective: This study is focused on the biosynthesis of silver nanoparticles (AgNPs) using aqueous extract of *Anredera cordifolia* and to investigate the free radical scavenging potential, antimicrobial activity of the nanoparticles against different human pathogens.

Methods: The formation of AgNPs was indicated by the color change from colorless to reddish brown. Biosynthesized AgNPs were characterized using several techniques, viz., ultraviolet (UV)-visible spectroscopy, Fourier transform infrared, X-ray diffraction (XRD), transmission electron microscopy (TEM), scanning electron microscopy (SEM), and energy dispersive X-ray analysis. The free radical scavenging potential was measured by 2, 2-diphenyl-1-picrylhydrazyl (DPPH), ferric reducing antioxidant power (FRAP) assay, antimicrobial activity against six microorganisms was tested using disc diffusion method.

Results: UV-visible spectral analysis showed silver surface plasmon resonance band at 426 nm. The crystalline morphology and size of the nanoparticles were determined by TEM, SEM, and XRD studies which showed the average size of the nanoparticles in the range 40-60 nm. The biologically synthesized nanoparticles efficiently inhibited pathogenic organisms such as *Escherichia coli*, *Staphylococcus aureus*, *Klebsiella pneumonia*, *Pseudomonas aeruginosa*, and *Proteus vulgaris*. The biosynthesized nanoparticles might serve as a potent antioxidant as revealed by DPPH assay and FRAP assay.

Conclusion: The biosynthesis of AgNPs had several advantages in pharmaceutical applications as well as large-scale commercial production.

Keywords: Silver nanoparticle, *Anredera cordifolia* leaf, Scanning electron microscopy, Transmission electron microscopy, X-ray diffraction, Antioxidant, Antimicrobial.

INTRODUCTION

Nanotechnology can be termed as the synthesis, characterization, exploration, and application of nanosized (1-100 nm) materials for the development of science. The intrinsic properties of metal nanoparticles are determined by size, shape, composition, crystallinity, and morphology. It is a field of science which deals with production, manipulation and use of materials ranging in nanometers. In nanotechnology nanoparticles research is an important aspect due to its innumerable applications. The nanoparticles have a wide range of applications, as in combating microbes [1], biolabeling [2], and in the treatment of cancer [3]. The antibacterial activity of silver species is known since ancient times [4] and it has been demonstrated that, at low concentrations, silver is nontoxic to human cells [5]. It has also been reported that Ag⁺ ions uncouple the respiratory chain from oxidative phosphorylation or collapse the proton-motive force across the cytoplasmic membrane [6]. The interaction of Ag⁺ with bacteria is directly related to the size and shape of the nanoparticles [7].

The research in nanotechnology highlights the possibility of green chemistry route to produce technologically valuable nanomaterials. In recent times, prevalence resistance to antimicrobial agents has emerged as a major health problem [8]. Biosynthesis of metallic nanoparticles is an eco-friendly process in the field of applied nanotechnology [9].

Among all metal-nanoparticles, silver nanoparticles (AgNPs) exhibit tremendous applications in spectrally selective coatings for solar energy absorption, optical receptors, biolabeling, intercalation materials for electrical batteries, filters, antimicrobial agents, and

sensors [10]. AgNP-embedded antimicrobial paint [11] is a promising area of ecofriendly applications. Hence, a variety of techniques including physical and chemical methods have been developed to synthesize AgNPs, the physical methods [12] are highly expensive and chemical methods are harmful to the environment [13]. Therefore, there is a growing need to develop environmentally benign nanoparticle synthesis processes that do not use toxic chemicals in the synthesis protocols.

It is generally recognized that AgNPs may attach to the cell wall, which disturbs cell-wall permeability and cellular respiration. The nanoparticles may also penetrate inside the cell causing damage by interacting with phosphorus and sulfur containing compounds such as DNA and protein. Another possible contribution to the bactericidal properties of silver particles is the release of silver ions [14].

Many researchers demonstrated the green synthesis of AgNPs including bacteria, actinomycetes, fungi and plants. Whereas, the plant materials have been successfully applied for AgNPs synthesis, due to its potential medicinal property, availability, possibility of faster rate of synthesis and may also reduce the steps in downstream processing, thereby making the process cost efficient [15,16].

This study was designed with a simple, cost-effective, and environmentally synthesis method of AgNPs at ambient conditions using *Anredera cordifolia* leaves as a reducing and stabilizing agent. In this study, we have explored the green synthesis of AgNPs using *A. cordifolia* leaf extract. Synthesized nanoparticles were characterized by ultraviolet (UV)-visible spectroscopy, X-ray diffraction (XRD),

ABSTRACT

Silver nanoparticles because of their interesting characteristics are currently the most widely used nanoparticles. One of the interesting properties is that they display antimicrobial activity. Concomitantly they exert cytoprotective effect on human cells. It is of interest to validate and analyse this property. In the present study, silver nanoparticles were synthesised with particle size between 40-60nm in diameter. These were then used to analyse their uptake and consequent cytotoxic effects on Human Prostate cancer cells (PC-3). The formation of Ag-NPs was confirmed by UV-Visible Spectroscopy, X-Ray Diffraction (XRD) pattern, Scanning Electron Microscopy (SEM) and Transmission Electron Microscopy (TEM). The synthesised Ag-NPs were predominately spherical in shape and polydispersed. Fourier Transform Infra-Red (FT-IR) spectroscopy analysis showed that the synthesised nano-Ag was capped with bimolecular compounds which are responsible for reduction of silver ions. The AgNPs showed potent cytotoxic activity against the human prostate cancer (PC-3) cell line at higher concentrations.

KEYWORDS: Cytotoxic effect, PC-3 cell line, silver nanoparticle, *Andrerdera cordifolia*, Cell viability, etc

INTRODUCTION

Carcinogenesis is a complex and multi-step process in which distinct molecular and cellular alterations occur. A cancer chemopreventive agent could be effective at any of these defined stages of carcinogenesis: initiation, promotion, progression.^[1, 2] The preventive mechanisms of tumor promotion by natural phytochemicals range from the inhibition of genotoxic effects, increased antioxidant and anti-inflammatory activity, inhibition of proteases and cell proliferation, protection of intercellular communications to modulation of apoptosis and signal transduction pathways.^[3]

Prostate cancer is the most common non-cutaneous solid cancer occurring among men in the USA. The most recent estimates from the American Cancer Society.^[4] showed that about 240,890 new cases of prostate cancer would be diagnosed in 2011, with 33,720 deaths attributable to prostate cancer in the United States alone. About one of six males in the U.S. may be afflicted with this cancer, and the risk is increased drastically for older males. Moreover, the risk of death due to metastatic prostate cancer is 1 in 36. Genetics, age, race, diet, and family history, and even lifestyle may all contribute to prostate cancer risk.^[5] The treatment options for prostate

cancer are surgery, chemotherapy, cryotherapy, hormonal therapy and/or radiation, but all are only beneficial at the early stages, with no significant effects after metastasis. Therefore, there is a high need for treatments that will stop the metastasis and invasion of prostate cancer cells.

Rapidly developing field of nanoscience had raised the possibility of using therapeutic nanoparticles in the diagnosis and treatment of human cancers.^[6] Nanoscale particles and molecules are a potential alternative for treatment of disease because they have unique biological effects based on the structure and size, which differ from traditional small molecule drugs.^[7]

The role of silver nanoparticles as an anticancer agent should open new door in the field of medicine. Silver nanoparticles should serve as one of the best ways of treating diseases that involve cell proliferation and cell death.^[8]

The cytotoxic effects of silver are the result of active physicochemical interaction of silver atoms with the functional groups of intracellular proteins, as well as with the nitrogen bases and phosphate groups in DNA.^[9]

In vitro antifungal activity of *Pterocarpus marsupium* used among tribal communities of Western Ghats, Coimbatore, Tamil Nadu

Rangasamy Dhanabalan^{1*}, Subbu Balachandar¹, Joseph Devakumar²

ABSTRACT

Background: To investigate the *in vitro* antifungal activity of *Pterocarpus marsupium* leaf extracts used in folklore treatments among tribal community in the Western Ghats of Coimbatore district. **Methods:** The crude aqueous and organic solvent leaf extracts extracted by cold maceration method were subjected to antifungal activity against *Aspergillus flavus* and *Aspergillus fumigatus* by agar plate dilution method. **Results:** The methanol and ethanol leaf extracts of *P. marsupium* showed significant ($P < 0.01$) antifungal activity against *A. flavus* at a minimum inhibitory concentration of 31 µg/mL with IC_{50} values 114.04 and 169 µg/mL, respectively. Similar antifungal activity of 100% inhibition was exhibited by alcoholic leaf extracts against *A. fumigatus*. Besides, the chloroform leaf extracts showed 82.94% and 80.58% fungistatic activity against *A. fumigatus* and *A. flavus*, respectively. Comparable antifungal activity was also observed in other concentrations of alcoholic and chloroform extracts of *P. marsupium* against *A. flavus* and *A. fumigatus*. The aqueous leaf extract did not show demonstrable antifungal activity against the two fungal strains used in the assay which was not up to the score. **Conclusion:** The methanolic and ethanolic leaf extracts of selected plants were more active against tested fungal strains when compared to the chloroform and aqueous extracts. Further investigations are mandatory to identify the antifungal compounds present in the chosen herb.

KEY WORDS: Antifungal, aspergillosis, bronchopulmonary, folklore, mycosis

INTRODUCTION

Dissemination of fungal spores is a major problem in the spread of spore derived allergic pulmonary diseases. In temperate and tropical climates *Aspergilli* are well-recognized causes of allergic bronchopulmonary infections. Aspergillosis has been recorded in India, regularly in tropical areas with the development of fungus ball and pulmonary cavitation in patients, causing severe hemoptysis secondary to tuberculosis.^[1] A type of aspergillosis called Farmer's Lung infection is a housing of mold spores in pulmonary cavities among paddy field agrarians involved in farming practices. Farmworkers in Narasipuram, Semmedu, and areas near Velliangiri foothills (Poondi) of the Western Ghats, Coimbatore, are the chief cultivators of grains and sugarcane.^[2] The husk, hay, and other grain debris are the major growth

substrates of *Aspergillus* species, and frequent exposer of these field workers during harvesting of crops is frequently prone to farmer's lung Aspergillosis infection. Treatment of such fungal infections should be considered with utmost consequence due to the emergence of antifungal resistance, if untreated which may be chronic leading to morbidity and sometimes fatal among the community.

As fungal infections with multidrug resistance have posed a great problem in tropics and the availability of antifungal is lesser compared to antibacterial agents, a search of alternative antifungal agents is a mandate with null side effects. Phototherapy is an arena practiced among the folklore traditional healers for various diseases and disorders. From time immemorial, traditionally phytotherapy information has been conceded as oral communication from generation to generation. Among secondary metabolites from herbal sources plant polyphenolics, essential oils, terpenoids, saponins, alkaloids, peptides, and proteins were evidenced to be natural antifungal compounds

In vivo antiplasmodial activity of medicinal plants used in pyrexia among ethnic communities of Western Ghats, Coimbatore, Tamil Nadu

Rangasamy Dhanabalan*, Subbu Balachandar, Joseph Devakumar, Babyraj Sreeraj, Jayasanker Nambiar Chandni

ABSTRACT

Background: Four folklore medicinal plants *Achyranthes aspera*, *Argemone mexicana*, *Myristica fragrans*, and *Pterocarpus marsupium* leaf extracts were investigated for their antiplasmodial activity in *Plasmodium berghei* infected Swiss albino mice model. **Methods:** The *in vivo* antiplasmodial activity was carried out adopting classical Peter's 4-day suppressive test, and Rane's Curative assay. **Results:** Peter's four day test confirmed the significant parasite suppression 97.72% ($P < 0.001$) in chloroquine (CQ) control prolonging the mean survival time of animals for 32 days. In Peter's four day test the extracts PMMLE, AMMLE and AMCLE exhibited a leading parasite suppression of 81%, 76.13%, and 73.86% respectively. The antiplasmodial extracts AMMLE, AMCLE, AAMLE, PMMLE and PMCLE screened from the suppressive test subjected in the curative assay revealed notably significant parasite suppression of 74.2% Peter's four day test ($P < 0.001$) in PMMLE at 400 mg/kg b.wt, whereas the extracts PMCLE and AMMLE at 400 mg/kg b.wt disclosed dose dependent suppressive effect of 60.8%, and 55.43% respectively compared to all other extracts subjected. Three extracts PMMLE, PMCLE and AMMLE screened from curative assay were subjected in prophylactic test, where PMMLE was found to be potential in defeating parasites $> 50\%$ at a dose level of 200 and 400 mg/kg b.wt with 57.23% and 77.23% achieving a statistical significance $P < 0.01$. The other extract PMCLE exposed 59.21% parasite suppression at 400 mg/kg b.wt with a significance $P < 0.05$, whereas the AMMLE did not express significant parasite suppression compared to other extracts subjected in the assay. **Conclusion:** The present investigation establishes, the selected plant species were effective in assorted range of antiplasmodial activity and could be a potential source in antimalarial drug discovery.

KEY WORDS: Antiplasmodial activity, Apicomplexan, Chemosuppression, *Plasmodium berghei*

INTRODUCTION

Among top three parasitic infections, malaria stands as a major health concern worldwide. In the developing countries, eradication of malaria still remains as a major health concern due to the resistance of mosquito vectors disseminating the infection among human host. The treatment regimen and purge of malaria poses a great problem worldwide due to the emergence of drug-resistant parasites. A fact sheet of world malaria report 2017 states, in 2016, there were an estimated 216 million cases of malaria, an increase of about 5 million cases over 2015. Malaria deaths reached 4, 45,000 estimating on data from 91 countries and areas

with ongoing malaria transmission. The world malaria report also states that the countries with weak malaria surveillance systems include India and Nigeria, two major contributors to the global burden of malaria, with 8% and 16% of cases, respectively, detected by the surveillance system.^[1]

Malaria apicomplexan parasite has emerged with resistance for conventional antimalarial agents and its incessant epitope change limited the success of malarial vaccines. Plants are veritable sources for their valuable phytochemicals being considered in the therapy and remedy of several ailments. For the past few decades in the field of medication, an upsurge in phototherapy has been recognized for safe treatment with nil side effects. Among different plant species *Achyranthes aspera*, *Argemone mexicana*, *Myristica fragrans*, and *Pterocarpus marsupium* are the folklore medicinal plants used between tribal

ABSTRACT

Web mining associate on the knowledge retrieval and the extraction data are analyzed. This web data process is extracted on the available sources (server, web page, cookies).search data is retrieved on the information retrieval. The relevancy to the user need using search rank algorithm information retrieval process is going on the web mining. The web mining serves on the log files on the ASCII text files to be log on the user's the high data usage are intended on the web documents in the Information retrieval. This paper will introduce late research utilizing keywords and information retrieval. Most of the search engines are ranking their search results in response to user's queries to make their search navigation easier and it explores the Agent based weighted page ranking algorithms for web content mining to retrieve more relevant information. AWPR algorithm retrieves the most important content information or web pages in front of end users.

Keywords-Data extraction, Web Content Mining, Page Rank, Weighted Page Rank

1.INTRODUCTION

Web mining traverse on the pattern in the web navigation mining path traversal graph are recommended on the web mining[4]. Web traversal mining navigates on the horizontal line. The user navigation pattern in the hyperlinks. The method is navigated on the certain pattern web content mining are categorize under the web query. While there are many benefits to be gained from web mining, A clear drawback is the potential for severe violations of privacy. As online learning method are expanded to the standard level. In late 2006 the education standard and quality assurance are medium level. Now the education standard is increased better. The web mining is created through the web logs. The web usage mining association rules are exceeded some specified threshold. [5] Classification techniques are building under the several e-commerce areas. The culture mining is discovered using web mining concept. The culture plays an important role predicts to be search on web mining.[6] Web mining system is constructing under the organized structure. To avoid problems we analyze the web data to the optimal solution to fulfill these conditions. The data base is stored by the resource to construct web data.

Personalized PageRank is a page rank calculation where random jumps are only allowed to a subset of start nodes. The resources of current process of calculation of Personalized PageRank are highly prohibitive. FAST Personalized PageRank is utilized to find the target nodeset. Using the mentioned target set, the algorithm gives an estimation of the closeness of any pair of nodes in the graph. As the time taken by the estimation of Personalized PageRank is directly proportional to the network size[11].

Dr Jayaraman Rengaramanujam
Associate Professor Department of Microbiology
Dr N.G.P. Arts & Science College
Coimbatore 641048

Dear Dr Rengaramanujam,

This has reference to your application **LFT50** for an IASc-INSA-NASc Summer Research Fellowship in 2017. We are happy to offer you a Fellowship to work for two months during this summer subject to verification of your marks as stated by you in the application. You will be working with Professor K. Balamurugan, Alagappa University, Karaikudi (e-mail: bsuryar@yahoo.com).

We have tried as far as practicable to assign you to a guide who works in your area of interest. **Where that has not been possible, you will work with the assigned guide in a related area that will be determined by the guide, and trust that the experience will be fruitful to you. We will not be able to make any changes in this regard.**

This Fellowship is subject to the following norms:

- The duration of the Fellowship is **eight weeks (56 days – including Sundays and General Holidays), and is not to be reduced. If you do not complete this requirement, you will not be paid the fellowship and the certificate that is usually issued on completion.**
- You will be provided III-tier A/c train fare from Coimbatore or Cuddalore to Alagappa Univ., Karaikudi and back.
- You will be paid a Fellowship of Rs. 15000/- per month towards your boarding, lodging and local transport expenses.
- As regards accommodation, please contact Professor Balamurugan as the Academy is not able to help you in this regard.

Please also go through carefully & comply with all the Instructions given in the attached sheet.

You are advised to get in touch with Professor Balamurugan immediately to work out the exact period of your visit. In the meantime please communicate with Mr C.S. Ravi Kumar, Coordinator, Summer Research Fellowship Programme, your acceptance of this Fellowship. We would need a joining report from you upon your arrival, and a brief report of your work at the end of four weeks so that your Fellowship for the first month can be paid. After the receipt of the final report, we shall release the remaining amount due to you along with your travel fare.

We urge you to convey your acceptance of this fellowship within 7 days by both online (the userid and password given at the bottom of the email) as well as by **returning the Form of Acceptance posted to you**. Even if you are not able to accept the fellowship, this should be communicated to the Academy immediately (both by email and in the Form of Acceptance) so that the fellowship can be awarded to another candidate in the waiting list.

With best wishes,

Yours sincerely,

K.L. Sebastian
 Chairman, Joint Science Education Panel

Dr. N.G.P. Arts and Science College
Coimbatore-48

Respected Madam,

Sub:- Science Academies' Summer Research Fellowship Program- Reg.-Req.

I have been selected for "Summer Research Fellowship-2017 (SRF-17)" by Indian Academy of Sciences- Bengaluru, Indian National Science Academy- New Delhi and The National Academy of Sciences, Allahabad for a tenure of 36 days to work with Professor K. Balamurugan, Department of Biotechnology, Alagappa University, Karaikudi. In this regard I kindly request you to permit me to take the offer from 17th April to 11th June 2017. This opportunity will help me in upgrading my research aptitude. Kindly do the needful.

Thanking You

Yours Sincerely

(DR. J. RENGARAMANUJAM)

GLYCAEMIC INDEX OF KIDNEY BEAN(*PHASEOLUS VULGARIS*) INCORPORATED IDLI – A CEREAL AND LEGUME BASED FERMENTED FOOD

S.UmaMaheswari Vadivelan¹ and Prathap Kumar H. Shetty²

1. Assistant professor, Department of Nutrition and Dietetics, Dr. NGP Arts and science college, Coimbatore.

2. Head & Associate professor, Department of Food Science and Technology, Pondicherry University, Pondicherry.

ABSTRACT

The aim of the present study was to improve the nutritional and glycaemic index of idli by substitution of kidney bean in idli batter. Fasting blood glucose level was taken and post prandial blood glucose level (at 30 min interval till 2 hours) was checked with bread as standard to assess the glycaemic index of control idli and developed idli. Based on the overall results of both textural and sensory parameters, the present data suggest that kidney bean could be substituted up to a level of 40% in idli batter to develop organoleptically acceptable breakfast food. The mean blood glucose levels were increased after the intake of idli at 30 and 60 minutes, after which there was a decrease from 60 minute to 90 minute and 120 minute. The glycaemic index of control idli was 98 and significantly higher ($p \leq 0.05$) than idli incorporated with *Phaseolus vulgaris*. From the results it is possible to identify food preparations in the traditional Indian diet having attributes of desired glycaemic effect, delayed peak rise, low glucose response curves. However in the present study, value added idli has high hypoglycaemic effect than control idli.

KEYWORDS: Idli, *Phaseolus vulgaris*, textural and sensory parameters glycaemic index

About the Institution

Under the auspices of Avinashilingam Education Trust, the patriot and educationist Dr. T.S. Avinashilingam Ayya found this great temple of learning with the vision to develop and empower women through modern scientific and value based education to enable them to lead a purposeful life filled with moral and spiritual values. Nurtured by the world renowned educationist and nutritionist Dr. Rajammal. P. Devadas, the institution provides quality education of global standards on a strong foundation of Indian values and traditions to women students based on current advances in Science, Technology and Societal demands with emphasis on commitment to social progress, peace, harmony and national integration.

About the Department

The vibrant department of Food Service Management and Dietetics since its inception in 1975 functions with the motto to enable students and research scholars to learn and explore the opportunities and challenges in the hospitality, food and dietetics sectors and to take up befitting positions. Till date the graduates and postgraduates have imprinted their foot steps at various capacities across the nation and around the globe as Food Service Managers, Nutritionists, Dietitians, Free lancers, Consultants and Academicians in the field of Hospitality Management and the Health sector.

Dear Sir/Madam,

Sub: Student Mr. GOPIKRISHNAN, R. II B.Com (151BI015)
Permission to undergo Internship Training in our industry.

This is in reference to your letter dated 18.04.2017. We are pleased to accord permission to the student Mr. Gopikrishnan R, of II B. Com., to undergo Internship Training in our industry for a period of 15 days.

Upon successful completion of the training, he will be issued a Certificate to that effect. He will be required to submit a copy of the Project Report, before completion of the training.

During the period, he may have to deal with important and sensitive information, records and such other matters of the company. He will, therefore, be required to sign a "code of conduct and secrecy agreement", on the first day of training.
