

**Dr. N.G.P. ARTS AND SCIENCE COLLEGE (Autonomous)**

**REGULATIONS 2023-24 for Post Graduate Programme (Outcome Based Education model with Choice Based Credit System)**

**M.Sc. Degree**

(For the students admitted during the academic year 2023-24 and onwards)

**Programme: M.Sc. Physics**

**Eligibility:**

A pass in the course of B.Sc. Degree Examination with Physics as Major and Mathematics and Chemistry as Ancillary subjects, or an examination accepted as equivalent there to accept by the academic council.

**Programme Educational Objectives:**

The Curriculum is designed to attain the following learning goals which students shall accomplish by the time of their graduation:

1. To produce graduates with advanced knowledge in Physics and requisite skills, in order to use their knowledge in Physics in a wide range of practical applications.
2. To develop creative thinking and the power of imagination to enable graduates work in research in academia and industry for broader applications.
3. To relate the training of Physics graduates to the employment opportunities within the country.
4. To promote societal values through Physics related activities.

**PROGRAMME OUTCOMES:**

On the successful completion of the program, the following are the expected outcomes.

| <b>PO Number</b> | <b>PO Statement</b>   |
|------------------|---|
| <b>PO1</b>       | Apply theoretical knowledge of principles and concepts of Physics to practical problems.  |
| <b>PO2</b>       | Develop skills in planning and carrying out advanced physics experiments.   |
| <b>PO3</b>       | Solve scientific problems by applying a combination of theory, numerical simulation, and experiments.   |
| <b>PO4</b>       | Relate critically to scientific models.   |
| <b>PO5</b>       | Examining specific phenomena theoretically and experimentally, to contribute to the generation of new scientific insights or to the innovation of new applications of physics research. |

**PG REGULATION (R5)**  
**(2023-24 and onwards)**  
**(OUTCOME BASED EDUCATION WITH CBCS)**

Effective from the academic year 2023-24 and applicable to the students admitted to the Degree of Master of Arts/Commerce/Management/Science.

**1. NOMENCLATURE**

**1.1 Faculty:** Refers to a group of programmes concerned with a major division of knowledge. Eg. Faculty of Computer Science consists of Programmes like Computer Science, Information Technology, Computer Technology, Computer Applications, Cognitive Systems, Artificial Intelligence and Machine Learning and Cyber Security and Data Analytics etc.

**1.2 Programme:** Refers to the Master of Arts/Management/Commerce/Science Stream that a student has chosen for study.

**1.3 Batch:** Refers to the starting and completion year of a programme of study. Eg. Batch of 2023-2025 refers to students belonging to a 2-year Degree programme admitted in 2023 and completing in 2025.

**1.4 Course:** Refers to component of a programme. A course may be designed to involve lectures / tutorials / laboratory work / seminar / project work/ practical training / report writing / Viva voce, etc. or a combination of these, to effectively meet the teaching and learning needs and the credits may be assigned suitably.

**a) Core Courses** A course, which should compulsorily be studied by a candidate as a core requirement is termed as a Core course.

**b) Extra Departmental Course (EDC):** A course chosen generally from a related discipline/subject, with an intention to seek exposure in the discipline relating to the core domain of the student.

**c) Discipline Specific Elective Course (DSE):** Elective courses are offered under main discipline/ subject of study.

d) **Internship/Industrial Training (IT):** Students must undertake industrial / institutional training for a minimum of 15 days during the II semester summer vacation. The students will submit the report for evaluation during III semester.

e) **Project Work:** It is considered as a special course involving application of knowledge in problem solving/analyzing/exploring a real-life situation. The Project work will be given in lieu of a Core paper.

f) **Extra credits:** Extra credits will be awarded to a student for achievements in co-curricular activities carried out outside the regular class hours. The guidelines for the award of extra credits are given in section two, these credits are not mandatory for completing the programme.

g) **Advanced Learner Course (ALC):** ALC is doing work of a higher standard than usual for students at that stage in their education. Research work / internships carried out in University/ Research Institutions/ Industries of repute in India or abroad for a period of 15 to 30 days.

## 2. STRUCTURE OF PROGRAMME

- Core Course
- Extra Departmental Course (EDC)
- Discipline Specific Elective (DSE)
- Industrial Training (IT)
- Project

## 3. DURATION OF THE PROGRAMME

A student is normally expected to complete the M.Sc. /M.Com. / M.A. Programme in 4 semesters. However, in any case not more than 5 consecutive semesters. Failing which the concerned BoS will identify suitable/ equivalent course.

## 4. REQUIREMENTS FOR COMPLETION OF A SEMESTER

Every student shall ordinarily be allowed to keep terms for the given semester in a program of his/ her enrolment, only if he/ she fulfills at least seventy five percent (75%) of the attendance taken as an average of the total number of lectures, practicals,

tutorials, etc. wherein short and/or long excursions/field visits/study tours organized by the college and supervised by the faculty as envisaged in the syllabus shall be credited to his attendance. Every student shall have a minimum of 75% as an overall attendance.

## 5. EXAMINATIONS

The end semester examinations shall normally be conducted after completing 90 working days for each semester. The maximum marks for each theory and practical course as follow,

### Mark distribution for Theory Courses

Continuous Internal Assessment (CIA) : 25 Marks

End Semester Exams (ESE) : 75 Marks

Total : 100 Marks

### i) Distribution of Internal Marks

| S. No.       | Particulars  | Distribution of Marks |
|--------------|--|-----------------------|
| 1            | CIA I (2.5 Units)<br>(On completion of 45 <sup>th</sup> working day)   | 5                     |
| 2            | Model (All 5 Units)<br>(On completion of 85 <sup>th</sup> working day) | 5                     |
| 3            | Attendance   | 5                     |
| 4            | Library Usage  | 5                     |
| 5            | Skill Enhancement *  | 5                     |
| <b>Total</b> |  | <b>25</b>             |

### Breakup for Attendance Marks:

| S. No. | Attendance Range | Marks Awarded |
|--------|------------------|---------------|
| 1      | 95% and above    | 5             |
| 2      | 90% - 94%        | 4             |
| 3      | 85% - 89%        | 3             |
| 4      | 80% - 84%        | 2             |
| 5      | 75% - 79%        | 1             |

**Note:**

Special Cases such as NCC, NSS, Sports, Advanced Learner Course, Summer Fellowship and Medical Conditions etc. the attendance exemption may be given by principal and Mark may be awarded.

**Break up for Library Marks:**

| S. No. | Attendance Range  | Marks Awarded |
|--------|-------------------|---------------|
| 1      | 10h and above     | 5             |
| 2      | 9h- less than 10h | 4             |
| 3      | 8h - less than 9h | 3             |
| 4      | 7h - less than 8h | 2             |
| 5      | 6h - less than 7h | 1             |

**Note:**

In exception, the utilization of e-resources of library will be considered.

**\*Components for “Skill Enhancement” may include the following:**

Class Participation, Case Studies Presentation/Term paper, Field Study, Field Survey, Group Discussion, Term Paper, Presentation of Papers in Conferences, Industry Visit, Book Review, Journal Review, e-content Creation, Model Preparation, Seminar and Assignment.

**Components for Skill Enhancement**

Any one of the following should be selected by the course coordinator

| S. No. | Skill Enhancement                      | Description   |
|--------|--|---|
| 1      | Class Participation                    | <ul style="list-style-type: none"> <li>Engagement in class</li> <li>Listening Skills</li> <li>Behavior</li> </ul>   |
| 2      | Case Study Presentation/<br>Term Paper | <ul style="list-style-type: none"> <li>Identification of the problem</li> <li>Case Analysis</li> <li>Effective Solution using creativity/imagination</li> </ul> |
| 3      | Field Study                            | <ul style="list-style-type: none"> <li>Selection of Topic</li> <li>Demonstration of Topic</li> <li>Analysis &amp; Conclusion</li> </ul>                         |

|    |                                       |  |
|----|---------------------------------------|--|
| 4  | Field Survey                          | <ul style="list-style-type: none"> <li>• Chosen Problem</li> <li>• Design and quality of survey</li> <li>• Analysis of survey</li> </ul>   |
| 5  | Group Discussion                      | <ul style="list-style-type: none"> <li>• Communication skills</li> <li>• Subject knowledge</li> <li>• Attitude and way of presentation</li> <li>• Confidence</li> <li>• Listening Skill</li> </ul> |
| 6  | Presentation of Papers in Conferences | <ul style="list-style-type: none"> <li>• Sponsored</li> <li>• International/National</li> <li>• Presentation</li> <li>• Report Submission</li> </ul>   |
| 7  | Industry Visit                        | <ul style="list-style-type: none"> <li>• Chosen Domain</li> <li>• Quality of the work</li> <li>• Analysis of the Report</li> <li>• Presentation</li> </ul>   |
| 8  | Book Review                           | <ul style="list-style-type: none"> <li>• Content</li> <li>• Interpretation and Inferences of the text</li> <li>• Supporting Details</li> <li>• Presentation</li> </ul>                             |
| 9  | Journal Review                        | <ul style="list-style-type: none"> <li>• Analytical Thinking</li> <li>• Interpretation and Inferences</li> <li>• Exploring the perception if chosen genre</li> <li>• Presentation</li> </ul>       |
| 10 | e-content Creation                    | <ul style="list-style-type: none"> <li>• Logo/ Tagline</li> <li>• Purpose</li> <li>• Content (Writing, designing and posting in Social Media)</li> <li>• Presentation</li> </ul>                   |
| 11 | Model Preparation                     | <ul style="list-style-type: none"> <li>• Theme/ Topic</li> <li>• Depth of background Knowledge</li> <li>• Creativity</li> <li>• Presentation</li> </ul>  |

|    |            |  |
|----|------------|--|
| 12 | Seminar    | <ul style="list-style-type: none"> <li>• Knowledge and Content</li> <li>• Organization</li> <li>• Understanding</li> <li>• Presentation</li> </ul> |
| 13 | Assignment | <ul style="list-style-type: none"> <li>• Content and Style</li> <li>• Spelling and Grammar</li> <li>• References</li> </ul>                        |

## ii) Distribution of External Marks

Total : 75  
Written Exam : 75

## Marks Distribution for Practical course

Total : 100  
Internal : 40  
External : 60

### i) Distribution of Internals Marks

| S. No.       | Particulars           | Distribution of Marks |
|--------------|-----------------------|-----------------------|
| 1            | Experiments/Exercises | 15                    |
| 2            | Test 1                | 10                    |
| 3            | Test 2                | 10                    |
| 4            | Observation Notebook  | 5                     |
| <b>Total</b> |                       | <b>40</b>             |

### ii) Distribution of Externals Marks

| S. No.       | Particulars | External Marks |
|--------------|-------------|----------------|
| 1            | Practical   | 40             |
| 2            | Record      | 10             |
| 3            | Viva- voce  | 10             |
| <b>Total</b> |             | <b>60</b>      |

Practical examination shall be evaluated jointly by Internal and External Examiners.

### A) Mark Distribution for Project

|                 |          |            |
|-----------------|----------|------------|
| <b>Total</b>    | <b>:</b> | <b>200</b> |
| <b>Internal</b> | <b>:</b> | <b>80</b>  |
| <b>External</b> | <b>:</b> | <b>120</b> |

#### i) Distribution of Internal Marks

| S. No.       | Particulars | Internal Marks |
|--------------|-------------|----------------|
| 1            | Review I    | 30             |
| 2            | Review II   | 40             |
| 3            | Attendance  | 10             |
| <b>Total</b> |             | <b>80</b>      |

#### ii) Distribution of External Marks

| S. No.       | Particulars                 | External Marks |
|--------------|-----------------------------|----------------|
| 1            | Project Work & Presentation | 100            |
| 2            | Viva -voce                  | 20             |
| <b>Total</b> |                             | <b>120</b>     |

Evaluation of Project Work shall be done jointly by Internal and External Examiners.

## 6. CREDIT TRANSFER

a. Upon successful completion of 1 NPTEL Course (4 Credit Course) recommended by the department, during Semester I to II, a student shall be eligible to get exemption of one **4 credit course** during the 3<sup>rd</sup> semester. The proposed NPTEL course should cover content/syllabus of exempted core paper in 3<sup>rd</sup> semester.

| S. No. | Course Code | Course Name | Proposed NPTEL Course  | Credit |
|--------|-------------|-------------|------------------------|--------|
| 1      |             |             | Option - 1 Paper title | 4      |
|        |             |             | Option - 2 Paper title |        |
|        |             |             | Option - 3 Paper title |        |

**b. Upon successful completion of 2 NPTEL Courses (2 Credit each) recommended by the department, during Semester I to II, a student shall be eligible to get exemption of **one 4 credit course** during the 3<sup>rd</sup> semester. Out of 2 NPTEL proposed courses, **at least 1 course** should cover content/syllabus of exempted core paper in 3<sup>rd</sup> semester.**

### **Mandatory**

**The exempted core paper in the 3<sup>rd</sup> semester should be submitted by the students for approval before the end of 2<sup>nd</sup> semester**

**Credit transfer will be decided by equivalence committee**

| S. No. | Course Code | Course Name | Proposed NPTEL Course  | Credit |
|--------|-------------|-------------|------------------------|--------|
| 1      |             |             | Option - 1 Paper title | 2      |
|        |             |             | Option - 2 Paper title |        |
|        |             |             | Option - 3 Paper title |        |
| 2      |             |             | Option - 1 Paper title | 2      |
|        |             |             | Option - 2 Paper title |        |
|        |             |             | Option - 3 Paper title |        |

| NPTEL Courses to be carried out during semester I – II. |              |       |                       |   |  |
|---|--------------|-------|-----------------------|---|--|
| S. No.  | Student Name | Class | Proposed NPTEL Course |   | Proposed Course for Exemption                  |
|   |              |       | Course I              | Option 1- Paper Title<br>Option 2- Paper Title<br>Option 3- Paper Title | Any one Core Paper in 3 <sup>rd</sup> Semester |
|   |              |       | Course II             | Option 1- Paper Title<br>Option 2- Paper Title<br>Option 3- Paper Title |  |
| Class Advisor   |              | HoD   |                       | Dean  |  |

## 7. INTERNSHIP/INDUSTRIAL TRAINING

### Mark Distribution for Internship/ Industrial Training

|                 |          |            |
|-----------------|----------|------------|
| <b>Total</b>    | <b>:</b> | <b>100</b> |
| <b>Internal</b> | <b>:</b> | <b>40</b>  |
| <b>External</b> | <b>:</b> | <b>60</b>  |

#### i) Distribution of Internal Marks

| S. No.       | Particulars | Internal Marks |
|--------------|-------------|----------------|
| 1            | Review I    | 15             |
| 2            | Review II   | 20             |
| 3            | Attendance  | 5              |
| <b>Total</b> |             | <b>40</b>      |

#### ii) Distribution of External Marks

| S. No.       | Particulars                                  | External Marks |
|--------------|--|----------------|
| 1            | Internship /Industrial training Presentation | 40             |
| 2            | Viva -voce                                   | 20             |
| <b>Total</b> |  | <b>60</b>      |

Internship/ Industrial training shall be evaluated jointly by Internal and External Examiners.

## 8. EXTRA CREDITS: 10

Earning extra credit is not essential for programme completion. Student is entitled to earn extra credit for achievement in Curricular/Co-Curricular/ Extracurricular activities carried out other than the regular class hours.

A student is permitted to earn a maximum of 10 extra Credits during the programme period.

A maximum of 1 credit under each category is permissible.

| Category                  | Credit |
|---------------------------|--------|
| Self-study Course         | 1      |
| CA/ICSI/CMA (Foundations) | 1      |

|   |   |
|---|---|
| CA/ICSI/CMA (Inter)   | 1 |
| Sports and Games  | 1 |
| Publications / Conference Presentations (Oral/Poster)/Awards        | 1 |
| Innovation / Incubation / Patent / Sponsored Projects / Consultancy | 1 |
| Representation in State / National level celebrations               | 1 |
| Awards/Recognitions/Fellowships                                     | 1 |
| <b>Advanced Learner Course (ALC)*</b>                               | 2 |

Credit shall be awarded for achievements of the student during the period of study only.

## GUIDELINES

### Self-study Course

A pass in the self-study courses offered by the department.

The candidate should register the self-study course offered by the department only in the III semester.

### CA/ICSI/CMA (Foundations)

Qualifying foundation in CA/ICSI/CMA / etc.

### CA/ICSI/CMA (Inter)

Qualifying Inter in CA/ICSI/CMA / etc.

### Sports and Games

The student can earn extra credit based on their Achievement in sports in University/ State / National/ International.

**Publications / Conference Presentations (Oral/Poster)**

Research Publications in Journals

Oral/Poster presentation in Conference

**Innovation / Incubation / Patent / Sponsored Projects / Consultancy**

Development of model/ Products /Prototype /Process/App/Registration of Patents/  
Copyrights/Trademarks/Sponsored Projects /Consultancy

**Representation in State/ National level celebrations**

State / National level celebrations such as Independence Day, Republic Day Parade,  
National Integration camp etc.

**Awards/Recognitions/Fellowships**

Regional/ State / National level awards/ Recognitions/Fellowships

**\*Advanced Learner Course (ALC):**

ALC is doing work of a higher standard than usual for students at that stage in their education.

Research work/internships carried out in University/ Research Institutions/ Industries of repute in India or abroad for a period of 15 to 30 days will be considered as Advanced Learners Course

### QUESTION PAPER PATTERN

#### CIA Test I : [1.5 Hours-2.5 Units] - 25 Marks

| SECTION     | MARKS            | DESCRIPTION  | TOTAL    | Remarks                                    |
|-------------|------------------|--|----------|--|
| Section - A | 8 x 0.5= 4 Marks | MCQ  | 25 Marks | Marks secured will be converted to 5 marks |
| Section - B | 3 x 2 = 6 Marks  | Answer ALL Questions<br>Either or Type ALL Questions Carry Equal Marks |          |  |
| Section - C | 3 x 5 = 15 Marks |  |          |  |

#### CIA Test II/ Model: [3 Hours-5 Units] - 75 Marks

| SECTION     | MARKS             | DESCRIPTION  | TOTAL    | Remarks                                    |
|-------------|-------------------|--|----------|--|
| Section - A | 10 x 1 = 10 Marks | MCQ  | 75 Marks | Marks secured will be converted to 5 marks |
| Section - B | 5 x 3 = 15 Marks  | Answer ALL Questions<br>(Either or Type Questions)<br>Each Questions Carry Equal Marks |          |  |
| Section - C | 5 x 8 = 40 Marks  |  |          |  |
| Section - D | 1 x 10 = 10 Marks | Compulsory Question  |          |  |

#### End Semester Examination [3 Hours-5 Units] - 75 Marks

| SECTION     | MARKS             | DESCRIPTION   | TOTAL    |
|-------------|-------------------|---|----------|
| Section - A | 10 x 1 = 10 Marks | MCQ   | 75 Marks |
| Section - B | 5 x 3 = 15 Marks  | Answer ALL Questions<br>(Either or Type Questions)<br>Each Questions Carry Equal<br>Marks |          |
| Section - C | 5 x 8 = 40 Marks  |   |          |
| Section - D | 1 x 10 = 10 Marks | Compulsory Question   |          |

**PG Credit Distribution:**

| Part                 | Subjects            | No. of Papers | Credit  | Semester No. |
|----------------------|---------------------|---------------|---|--------------|
| III                  | Core                | 14            | Theory:<br>$11 \times 04 = 44$<br>$02 \times 03 = 06$ | I-IV         |
|                      |                     | 06            | Practical:<br>$06 \times 02 = 12$                     |              |

### DISCIPLINE SPECIFIC ELECTIVE

**Students shall select the desired course of their choice in the listed elective course during Semesters I & IV**

#### **Semester I (Elective I)**

##### **List of Elective Courses**

| S. No | Course Code | Course Name                                 |
|-------|-------------|---|
| 1     | 232PY2A1DA  | Energy Physics                              |
| 2     | 232PY2A1DB  | Materials Physics and Processing Techniques |
| 3     | 232PY2A1DC  | Laser Physics and Nonlinear Optics          |

#### **Semester II (Elective II)**

##### **List of Elective Courses**

| S. No | Course Code | Course Name              |
|-------|-------------|--------------------------|
| 1     | 232PY2A2DA  | Physics of Nanomaterials |
| 2     | 232PY2A2DB  | Experimental Design      |
| 3     | 232PY2A2DC  | Medical Physics          |

#### **Semester III (Elective III)**

##### **List of Elective Courses**

| S. No | Course Code | Course Name                          |
|-------|-------------|--------------------------------------|
| 1     | 232PY2A3DA  | Crystal growth and thin film physics |
| 2     | 232PY2A3DB  | Instrumental methods of analysis     |
| 3     | 232PY2A3DC  | Radiological safety aspects          |

#### **Semester IV (Elective IV)**

##### **List of Elective Courses**

| S. No | Course Code | Course Name                            |
|-------|-------------|--|
| 1     | 232PY2A4DA  | Solar Cells                            |
| 2     | 232PY2A4DB  | Band gap Engineering in Semiconductors |
| 3     | 232PY2A4DC  | Plasma Physics                         |

### EXTRA CREDIT COURSES

The following are the courses offered under self study to earn extra credits:

| S. No | Course Code | Course Name                          |
|-------|-------------|--------------------------------------|
| 1     | 232PY2ASSA  | IPR, Innovation and Entrepreneurship |
| 2     | 232PY2ASSB  | Nanoscience                          |

### CERTIFICATE PROGRAMMES

The following are the programme offered to earn extra credits:

| S. No | Programme Code and Name   | Course Code | Course Name                          |
|-------|---|-------------|--------------------------------------|
| 1     | 2PY5A: Certificate Course in Nanomaterials Preparation Techniques | 232PY5A1CA  | Nanomaterials Preparation Techniques |
| 2     | 2PY5B: Certificate Course in Nanomaterials Characterization       | 232PY5B1CA  | Nanomaterials Characterization       |

| Course Code | Course Name          | Category | L | T | P | Credit |
|-------------|----------------------|----------|---|---|---|--------|
| 232PY2A1CA  | MATHEMATICAL PHYSICS | CORE     | 4 | 1 | - | 4      |

**PREAMBLE**

This course has been designed for students to learn and understand

- The concept of matrices, types of linear equations and complex variables
- Develop expertise in special functions and partial differential equations
- Develop expertise in special functions and partial differential equations

**COURSE OUTCOMES**

On the successful completion of the course, students will be able to

| CO Number | CO Statement  | Knowledge Level |
|-----------|---|-----------------|
| CO1       | Understand the concept of free electrons in crystals    | K2              |
| CO2       | Analyze the Thermal and Optical Properties of Materials | K3              |
| CO3       | Interpret the Dielectric Properties of Materials        | K3              |
| CO4       | Obtain knowledge on Magnetic Properties of Materials.   | K3              |
| CO5       | Expand Knowledge on Superconductors                     | K4              |

|------------|----------------------|------------|

Total Credits: 4

Total Instruction Hours: 60 h

### Syllabus

#### Unit I      Matrices and Vectors      12 h

Rank of a matrix and some of its theorems (Normal Form, Triangular Form) - Types of linear equations - Solution to linear homogeneous and non-homogeneous equations - Vectors: Linear dependence and independence of vectors - Linearly dependence and independence of vectors by rank method - Inner product space - Orthogonal vectors - Orthonormal vectors - Gram-Schmidt orthogonalization process.

#### Unit II      Complex Variable      12 h

Analytical functions - Cauchy-Riemann equations - Line integrals - Cauchy's theorem - Cauchy integral formula - Taylor's and Laurent's expansions - Cauchy's residue theorem - Poles - Evaluation of residues

#### Unit III      Special Functions      12 h

Legendre's differential equations: Legendre polynomials - Generating functions - Recurrence relation - Bessel's differential equation: Bessel polynomials - Generating functions - Recurrence relation - Hermite differential equation: Hermite polynomials - Generating functions - Recurrence relation

#### Unit IV      Differential Equations and Partial Differential Equations      12 h

Differential Equations: Linear ordinary differential equations - First order and second order equations and their various solutions - Partial differential equations: Solution of Laplace equation - Solution of wave and heat equations in two dimensions - Poisson and Helmholtz equations - Diffusion and wave equations..

#### Unit V      Tensor and Group theory      10 h

Tensors: Contravariant - Covariant - Mixed tensors - Addition and subtraction of tensors - Symmetry and Antisymmetry tensor - Quotient rule - Pseudo tensors. Group theory: Subgroups - Classes - Cyclic groups - Abelian groups - Cosets - Homomorphism and isomorphism - Reducible and irreducible representations - Character table for simple molecular types ( $C_{2v}$  and  $C_{3v}$  point group)..

#### PREAMBLE

This course has been designed for students to learn and understand

- The concepts of microstates, macrostates and ensembles
- The various statistical distributions and transport phenomenon
- The concepts of phase transitions and thermodynamic functions

#### COURSE OUTCOMES

On the successful completion of the course, students will be able to

| CO Number | CO Statement  | Knowledge Level |
|-----------|---|-----------------|
| CO1       | Relate the thermodynamics, microstates through thermodynamics postulates, quantities, and relations | K2              |
| CO2       | Identify the micro and macroscopic properties of the mater  | K3              |
| CO3       | Explain the classical and quantum distribution laws and their relations                             | K2              |
| CO4       | Apply the transport properties and understand equilibrium and non-equilibrium process               | K3              |
| CO5       | Classify and evaluate the heat capacities, Ising model through phase transitions                    | K4              |

Total Instruction Hours: 60 h

### Syllabus

#### Unit I Thermodynamics, Microstates and Macrostates 12 h

Basic postulates of thermodynamics – Fundamental relations and definition of intensive variables – Intensive variables in the entropic formulation – Equations of state – Euler relation – Densities – Gibbs-Duhem relation for entropy – Microstates and macrostates – Ideal gas – Liouville's Theorem

#### Unit II Microcanonical, Canonical and Grand Canonical Ensembles 12 h

Microcanonical distribution function – Two level system in microcanonical ensemble – Gibbs paradox – The canonical distribution function – Partition function and free energy of an ideal gas – Relation between grand canonical and canonical partition functions

#### Unit III Distributions Functions and Fermi Energy 12 h

Maxwell-Boltzmann -Bose-Einstein and Fermi-Dirac distributions – Non interacting Bose gas and thermodynamic relations – Chemical potential of bosons – Non interacting Fermi gas and thermodynamic relations – Fermi gas at zero and low temperature – Fermi energy – Fermi momentum.

#### Unit IV Transport Processes 12 h

Derivation of Boltzmann transport equation – Representation of states – Free streaming – Collision term – Equilibrium distribution – Transport phenomena – One speed and one dimension – Thermal conductivity – Brownian motion – Langevin's theory – Molecular diameter..

#### Unit V Heat Capacities, Ising Model and Phase Transitions 12 h

Heat capacities of heteronuclear diatomic gas – Heat capacities of homonuclear diatomic gas – One-dimensional Ising model and its solution by variational method – Phase transitions and criterion for phase transitions – Classification of phase transitions by order and by symmetry – Phase diagrams for pure systems – Clausius-Clapeyron equation

**PREAMBLE**

This course has been designed for students to learn and understand

- The concepts of Lagrangian and Hamiltonian mechanics
- Apply the concepts of classical mechanics to the particle systems and rigid bodies
- Emphasize the mathematical formulation in relativity problems

**COURSE OUTCOMES**

On the successful completion of the course, students will be able to

| CO Number | CO Statement  | Knowledge Level |
|-----------|---|-----------------|
| CO1       | Apply the Lagrangian formulation for the motion of the particles            | K3              |
| CO2       | Construct the Hamilton's dynamics and experiment with variational principle | K3              |
| CO3       | Summarize the canonical transformations                                     | K2              |
| CO4       | Analyze the dynamics of a rigid body in various aspects                     | K4              |
| CO5       | Make use of the central force problem and theory of relativity              | K3              |

Total Credits: 4

Total Instruction Hours: 48 h

### Syllabus

#### Unit I Lagrangian Dynamics 10 h

Mechanics of system of particles - Coordinate systems - Configuration space - Constraints - Principle of virtual work - D'Alembert's principle - Hamilton's principle - Lagrange's equation - Conservation laws and Symmetry properties - Applications of the Lagrangian formulation: Single particle in space - Atwood's machine.

#### Unit II Hamilton's Dynamics and Variational Principle 10 h

Cyclic coordinates - Conservation theorem - Jacobi integral equation for Hamilton's principle function - Hamilton's equations - Hamilton's equations in different coordinate systems - Examples in Hamiltonian dynamics - Calculus of variation - Principle of least action

#### Unit III Classical Transformation and Poisson Brackets 9 h

Canonical transformations - Legendre transformation - Generating functions - Procedure for application of canonical transformations - Condition for canonical transformation - Poisson brackets - Lagrange Brackets - Relation between Lagrange and Poisson brackets.

#### Unit IV Dynamics of a Rigid Body 10 h

Generalized coordinates of rigid body - Euler angle - Infinitesimal rotation as vectors - Components of angular velocity - Angular momentum - Inertia tensor - Moments of Inertia for different body systems - Euler's equations of motion - Torque free motion of a rigid body

#### Unit V Central Force Problem and Theory of Relativity 9 h

Reduction to the equivalent one body problem - Equation of motion and first integrals - Classification of orbits - Kepler problem: Motion under inverse square law - Artificial satellites - Virial theorem - Lorentz transformation - Consequences of Lorentz transformations

### PREAMBLE

This course has been designed for students to learn and understand

- The various types of diodes, transistors and their applications
- Acquire knowledge on transistors and thyristors
- The types of operational amplifiers and integrated circuits

### COURSE OUTCOMES

On the successful completion of the course, students will be able to

| CO Number | CO Statement  | Knowledge Level |
|-----------|---|-----------------|
| CO1       | Outline about various semiconductor diodes                            | K2              |
| CO2       | Identify and construct various transistors and optoelectronic devices | K3              |
| CO3       | Examine the working of thyristors and its applications                | K4              |
| CO4       | Categorize the analog electronics                                     | K4              |
| CO5       | Experiment with the operational amplifiers and integrated chips       | K3              |

Total Instruction Hours: 48 h

### Syllabus

#### Unit I Special Diodes

9 h

V-I Characteristic of a PN junction diode - The ideal diode - Static and dynamic resistance of a diode - Parallel configuration of a diode circuits with a DC voltage source - Diode circuit with DC and AC voltage sources - Zener diode - Tunnel diode - Varactor diode - Schottky diode

#### Unit II Power Electronics and Optoelectronics Device

9 h

Bipolar junction transistor construction, Current gain, Input and output of BJT in CB, CE, CC configurations - Phototransistor - Operation, characteristic, drain and transfer characteristics of JFET. Circuit symbol - drain characteristics and transfer characteristics of depletion type MOSFET.

#### Unit III Thyristors

10 h

Types of thyristors - Silicon controlled rectifier (SCR) - SCR biasing and operation - SCR equivalent circuit - V-I characteristics of SCR - Uni-junction Transistor (UJT) - constructions and equivalent circuit of UJT - UJT operation - V-I characteristics of UJT - Silicon controlled switch (SCS) - SCS operation - applications - SUS, SBS, SAS.

#### Unit IV Analog Electronics

10 h

Op-Amp Parameters - Block diagram of an Op-Amp - The Op-Amps as a Voltage amplifier - Ideal operational amplifier - Virtual ground and summing point - Inverting amplifier - Non inverting amplifier - Linear amplifier - Differential amplifier - Active filters - low pass filters - high pass filters - band pass filters

#### Unit V Op Amp Applications and Special ICs

10 h

Comparators - The integrator - The differentiator - Log Amplifier - Antilog Amplifier - Linear integrated circuits - Digital integrated circuits - Integrated devices and circuits formation - Applications - 555 timer circuit - Functional block diagram - Characteristics and applications - Astable and monostable multivibrator

| 232PY2A1DA | ENERGY PHYSICS | SEMESTER I |
|------------|----------------|------------|

Total Credits: 4

Total Instruction Hours: 48 h

### Syllabus

#### Unit I Energy Source 10 h

Energy and sustainable development - Scientific principles of renewable energy - Properties of transparent materials - Heat transfer by mass transport - Multimode transfer and circuit analysis - Extraterrestrial solar radiation - Components of radiation - Effect of earth's atmosphere - Measurement of solar radiation.

#### Unit II Hydro-power and Wind power 9 h

Assessing the resource for small installations - Reaction turbines - Hydroelectric systems - Turbine types and terms - Linear momentum and basic theory - Dynamic matching - Blade element theory- Characteristics of the wind - Power extraction by a turbine - Electricity generation - Mechanical power.

#### Unit III Biomass, Biofuels and Geothermal energy 10 h

Biofuel classification - Biomass production for energy farming - Direct combustion for heat - Pyrolysis (destructive distillation) - Alcoholic fermentation - Anaerobic digestion for biogas - Wastes and residues - Vegetable oils and biodiesel - Geophysics - Dry rock and hot aquifer analysis - Harnessing Geothermal Resources.

#### Unit IV Solar Energy and Photo synthesis 10 h

Air heaters - Water desalination - Solar ponds - Solar concentrators - Solar thermal electric power systems - Photon absorption at the junction - Solar radiation absorption - Maximizing cell efficiency -Solar cell construction - Types and adaptations of photovoltaics - Photovoltaic circuit properties - Thermodynamic considerations - Photophysics.

#### Unit V Energy systems, Storage and Transmission 09 h

Biological storage - Chemical storage - Heat storage - Electrical storage: batteries and accumulators - Fuel cells - Mechanical storage - Distribution of energy - Electrical power - Socio-political factors - Some policy tools.

#### PREAMBLE

This course has been designed for students to learn and understand

- The nucleation and growth techniques of crystals, thin films and nanomaterials
- The various plasma and vacuum processing techniques
- The structural, morphology, and surface characterization techniques

#### COURSE OUTCOMES

On the successful completion of the course, students will be able to

| CO Number | CO Statement  | Knowledge Level |
|-----------|---|-----------------|
| CO1       | Experiment with the growth process of crystals.   | K3              |
| CO2       | Explain the methods of plasma processing  | K2              |
| CO3       | Make use of the important concepts of vacuum techniques.                                  | K3              |
| CO4       | Categorize the physical and chemical growth methods.                                      | K4              |
| CO5       | Examine the various spectroscopic and microscopic characterization methods for materials. | K4              |

Total Instruction Hours: 48 h

### Syllabus

#### Unit I Crystal Growth and Nucleation 10 h

Nucleation phenomena: Critical supersaturation - Homogeneous and heterogeneous nucleation - Nucleation on a substrate - Nucleation of a crystalline material - Surface nucleation - Vapor-Liquid-Solid mechanism of crystal growth - Gibbs's free energy- Chemical potential - Solubility curves - Bridgman-Stockbarger and related techniques - Czochralski and related techniques.

#### Unit II Thermal Plasma Processing 10 h

Advantages of plasma processing - Thermal plasmas - Principles of plasma generation - DC plasma torches - AC plasma torches - RF plasma torches - Plasma-particle interaction - Plasma processing systems - Plasma-spraying - Plasma reactors and furnaces - Plasma decomposition - Processing of ceramics - Treatment of hazardous wastes.

#### Unit III Vacuum Techniques 9 h

Artificial vacuum - Natural vacuum - Applications of vacuum techniques - Calculation of vacuum systems - Vacuum pumps - Principles of pumping - Parameters and classifications - Mechanical pumps - Vapour pumps - Ion-pumps - Classification and selection of vacuum gauges - Thermal conductivity gauges - Pirani gauge.

#### Unit IV Growth Technique of Thin films and Nanomaterials 9 h

Thermal Evaporation: RF heating - Electron bombardment heating - Cathodic sputtering: Glow discharge sputtering - Reactive sputtering - Physical Vapor Deposition - Chemical Vapor Deposition - Sol-Gel Technique - Hydrothermal growth - Combustion synthesis - Microwave synthesis.

#### Unit V Characterization Tools 10 h

Working principles and instrumentation: X-Ray Diffraction - Raman spectroscopy - UV-vis spectroscopy - Photoluminescence spectroscopy - Fourier transform infrared spectroscopy - Scanning electron microscopy - Transmission electron microscopy - Scanning probe microscopy.

Total Instruction Hours: 48 h

### Syllabus

#### Unit I Lasers Fundamentals and Types 10 h

Principle of laser - Absorption process - Emission process - Characteristics of laser - Einstein relation - Laser operation - Population inversion and derivation of threshold gain - Gain medium - Optical feedback - Active medium - Laser types - He-Ne laser - CO<sub>2</sub> laser - Nd:YAG laser - Semiconductor laser - Liquid dye laser.

#### Unit II Laser Characteristics 9 h

Threshold conditions - Line shape function with Doppler broadening - Population inversion and pumping threshold - High intensity laser - Laser modes and mode locking - Mode locking method - Q switching and techniques - Frequency stabilization.

#### Unit III Laser Applications 9 h

Industry - Medical application of laser - Safety aspects in laser usage - Laser Doppler velocity meter - Laser strain gauges - Holography: Operating principle - Construction and reconstruction of hologram - Simplified theory of holography - Holographic memory - Laser machining processes - Laser spectroscopy.

#### Unit IV Introduction to Nonlinear Optics 10 h

Introduction to nonlinear optics - Descriptions of nonlinear optical processes - Second harmonic generation - Optical parametric oscillation - Third-order nonlinear optical processes - Third-harmonic generation - Nonlinear susceptibility - Properties of the nonlinear susceptibility.

#### Unit V Non Linear Optical Interactions 10 h

The wave equation for nonlinear optical media - Phase matching - Quasi-phase matching - The Manley Rowe relations - Sum frequency generation - Difference frequency generation and parametric amplification - Nonlinear optical interactions with focused Gaussian beams.

Total Credits: 4

Total Instruction Hours: 48 h

### Syllabus

#### Unit I Microwave Spectroscopy 9 h

Rotation of molecules – Rigid rotator (diatomic molecules) - Expression for rotational constant - Intensity of spectral lines - Theory of microwave spectra of linear and symmetric top molecules – Techniques and instrumentation - Chemical analysis by microwave spectroscopy.

#### Unit II Infrared Spectroscopy 9 h

Vibrational energy of a diatomic molecule- Infrared selection rules -Vibrating diatomic molecule - Normal modes of vibration in crystal - Interpretation of vibrational spectra - Group frequencies - IR spectrophotometer instrumentation - Sample handling techniques - Fourier transform infrared spectroscopy (principle and working) - Applications.

#### Unit III Raman Spectroscopy 10 h

Theory of Raman scattering - Rotational Raman spectra - Vibrational Raman spectra - Mutual exclusion principle - Raman spectrometer - Sample handling techniques - Polarization of Raman scattered light - Structure determination using IR and Raman spectroscopy - Raman investigations of phase transitions - Resonance Raman scattering - Surface selection rules - SERS microprobe – Applications of SERS.

#### Unit IV Nuclear Magnetic Resonance and Electron Spin Resonance Spectroscopy 10 h

Theory of NMR method – Resonance condition – NMR Instrumentation – Relaxation processes - Bloch equations - Chemical shift – Spin-spin coupling –Interpretation of certain NMR spectra.

Principle of ESR - ESR spectrometer – Total Hamiltonian – Hyperfine structure – ESR spectra of free radicals in solution.

#### Unit V Nuclear Quadrupole Resonance and Mossbauer Spectroscopy 10 h

Principle of nuclear quadrupole resonance – Transitions for axially and non-axially symmetric systems – NQR instrumentation – Crystallographic inequivalence - Chemical bonding – Hydrogen bonding.

The Mossbauer effect - Recoilless emission and absorption - Experimental techniques  
 - Isomer shift - Quadrupole Interaction - Magnetic hyperfine interaction -  
 Applications.

## Syllabus

**Unit I Fundamentals of Crystallography and Bonding in solids 12 h**

The solid state -Periodicity in crystals - Bravais lattices in three dimension -Rational features of a crystals and miller indices - Interplanar spacing - Simple and common crystal structures (SC, BCC, FCC, Diamond, NaCl,) - Forces between atoms - Ionic bonding - The Born-Haber Cycle - Covalent bonding - Metallic bonding - Hydrogen bonding - Van der Waals bonding

**Unit II Diffraction of Waves and Particles by Crystals 12 h**

X-rays and their generation - Moseley's law - X-ray Diffraction - Bragg's law - Correction for Bragg's equation - Laue equation - Interpretation of Braggs equation - Ewald construction - Reciprocal lattice - Properties of reciprocal lattice -Reciprocal lattice to BCC & FCC lattice - X-Ray Diffraction experiment - Powder diffractometer - Electron Diffraction - Neutrons Diffraction.

**Unit III Crystal Imperfections and Atomic Diffusion 12 h**

Crystal imperfections: Point imperfections - Concentrations of point imperfection - Line imperfections - Burgers Vector - Presence of dislocation - Surface imperfections - Ficks first and second law - Atomic diffusion: Diffusion mechanism - Random walk treatment of diffusion - Kirkendall effect - Diffusion in alkali halides.

**Unit IV Lattice Vibration and Thermal Properties 12 h**

Lattice Vibration: Dynamics of the chain of identical atoms - Symmetry in K space - Number of modes in the first zone Low wavelength limit - Phase and group velocities - Dynamics of a diatomic linear chain - The acoustic branch - The optical branch - Anharmonicity and thermal expansion - Thermal properties: the classical model - Einstein's theory of specific heat - Density of states.

**Unit V Energy Band Theory and Fermi Surface 12 h**

Energy Band Theory: Bloch theorem - Kronig - Penney model - Construction of Fermi surfaces - Extended, Reduced, and periodic zone schemes - Nearly free electron model - Tight binding approximation -Fermi surface: Fermi surface and

Brillouin zones - Characteristics of Fermi surfaces - Experimental study of Fermi surfaces: Anomalous skin effect - Cyclotron resonance - De Haas Van Alphen effect.

**PREAMBLE**

This course has been designed for students to learn and understand

- Enable to learn Schrödinger wave equation
- Apply quantum mechanics to dimensional wave equations
- Find the solution for identical particles.

**COURSE OUTCOMES**

On the successful completion of the course, students will be able to

| CO Number | CO Statement  | Knowledge Level |
|-----------|---|-----------------|
| CO1       | Extend the idea and applications of Schrödinger wave equation.            | K2              |
| CO2       | Utilize the principle of moment of inertia for experimental verification. | K3              |
| CO3       | Apply quantum mechanics to three-dimensional wave equations.              | K3              |
| CO4       | Generalize the Heisenberg and Schrödinger wave equations.                 | K2              |
| CO5       | Analyze the angular momentum and the system of identical particles.       | K4              |

Total Instruction Hours: 60 h

## Syllabus

**Unit I Foundations of Quantum Mechanics 12 h**

Postulates of quantum mechanics - Wave packet, Eigen values and functions - Hermitian operator - Free particle - Operator for momentum and energy - Interpretation of the wave function - Probability of interpretation, expectation value - Schrödinger equation, Ehrenfest's theorem.

**Unit II Eigen Spectrum, Identical Particles 12 h**

Equation of motion - Schrödinger, Heisenberg and interaction representation - Square well potential with rigid walls - Square well potential with finite walls - Square well potential barrier - Alpha emission - Identical particles - Exchange operator.

**Unit III Three-Dimensional Problems and Angular Momentum 12 h**

Particle in a spherical well - Hydrogen atom - Rigid rotator - Angular momentum operator - Eigen value and eigen function of  $L^2$  and  $L_z$  - Eigen value of  $J^2$  and  $J_z$  - Addition of angular momenta - Clebsch Gordan coefficients.

**Unit IV Matrix Formulation, Spin of Quantum Theory 12 h**

Eigen values and eigen vector of matrices - Hilbert space - Dirac's Bra-Ket notation - 1D harmonic oscillator in matrix mechanics - Pauli's exclusion principle - Inclusion of spin - Spins functions for two electrons.

**Unit V Scattering Theory 12 h**

Scattering by a perfectly rigid sphere - Scattering by a coulomb field - Green's functions - Born approximation and its validity - Scattering by a square well potential - Scattering from an exponential potential.

Total Credits: 2  
Total Instructions Hours: 48 h

| S.No | Contents  |
|------|---|
| 1    | Determination of optical activity of specific rotation using Polarimeter. |
| 2    | Determination of viscosity of a liquid by Mayers method.                  |
| 3    | Determination of $e/m$ by Thomson method.                                 |
| 4    | Determination of susceptibility by Quinke's method.                       |
| 5    | Determination of $e/m$ by Magnetron method.                               |
| 6    | Study of Band gap energy using Thermistor.                                |
| 7    | Determination of Hall coefficient using Hall Effect.                      |
| 8    | Determination of Refractive index of liquid by Newton's ring.             |
| 9    | Determination of the bandgap of the material using four probe method.     |
| 10   | Find the Young's modulus of a material by Hyperbolic fringes.             |
| 11   | Determination of Planck's constant.                                       |
| 12   | Study the Characteristics of Solar cells.                                 |

Note: Any 10 experiments

Total Credits: 2

Total Instructions Hours: 48 h

| S.No | Contents   |
|------|--|
| 1    | Construction of Colpitt's oscillator using Op-Amp.                               |
| 2    | Study the Schmitt trigger using OP-Amp.  |
| 3    | Study the static and drain characteristics of a JFET.                            |
| 4    | Construct analog to digital converter using IC 741.                              |
| 5    | Construct inverting, non-inverting and voltage follower using Op-Amp.            |
| 6    | Study the half adder, full adder, half subtractor and full subtractor using ICs. |
| 7    | Construction of bistable multivibrator using Op-amp 741/NE 555.                  |
| 8    | Study the characteristics of BJT.  |
| 9    | Construct the Log amplifier using Op-amp 741.                                    |
| 10   | Construct an astable multivibrator using IC 741.                                 |
| 11   | Construct second order low and high pass filters using IC 741.                   |
| 12   | Study the characteristics of MOSFET.   |

**Note:** Any 10 experiments

## Syllabus

**Unit I Solution of Algebraic and Transcendental Equations 9 h**

Introduction - bisection method - iteration method - method of False Position - Newton-Raphson method - Ramanujan's method - Graeffe's Root-Squaring method.

**Unit II Solution of Linear Systems 10 h**

Direct Methods: Gaussian Elimination method - modification of the Gauss Method to compute the inverse - method of factorization - solution of tridiagonal systems - solution of linear systems: iterative methods - Householder's method.

**Unit III Interpolation 9 h**

Introduction - errors in polynomial interpolation - finite differences - detection of errors by difference tables - differences of a polynomial - Newton's formulae - Gauss's central difference formulae - Stirling's formula - interpolation with unevenly spaced points: Lagrange's interpolation formula - error in Lagrange's interpolation formula - Hermite's interpolation formula.

**Unit IV Numerical Differentiation and Integration 10 h**

Introduction - numerical differentiation - maximum and minimum values of a tabulated function - numerical integration - Trapezoidal rule - Simpson's 1/3 Rule - Simpson's 3/8 Rule - Boole's and Weddle's Rules

**Unit V Numerical Solution of Ordinary Differential Equations 10 h**

Introduction - solution by Taylor's series - Picard's Method - Euler's Method - Runge-Kutta Methods - Predictor Corrector Methods.

Note: Distribution of marks 80% Problems and 20% Theory.

### Syllabus

#### Unit I Classification of Nanomaterials 10 h

Definition of zero, one, two and three dimension nanomaterials – Surface energy – Chemical potential as a function of surface curvature – Electrostatic stabilization: Surface charge density - DLVO theory - Steric stabilization: solvent and polymer.

#### Unit II Special Nanomaterials 10 h

Carbon fullerenes and nanotubes: Carbon fullerenes, Fullerene derived crystals, Carbon nanotubes - Micro and Mesoporous Materials: Ordered mesoporous structures - Random mesoporous structures - Crystalline microporous materials: zeolites - Organic-inorganic hybrids: Class 1 hybrids - Class 2 hybrids.

#### Unit III Properties 9 h

Physical properties of nanomaterials: Melting points and lattice constants – Mechanical properties – Optical properties: Surface plasmon resonance – Quantum size effects – Electrical property: Surface scattering - Change of electronic structure - Quantum transport - Effect of microstructure.

#### Unit IV Synthesis 10 h

Physical vapour deposition: Evaporation - Molecular beam epitaxy - Sputtering - Chemical vapour deposition: Typical chemical reaction - Reaction kinetics - CVD methods - Atomic layer deposition - Superlattices - Sol-Gel Films.

#### Unit V Characterization 9 h

Structural characterization: X-Ray diffraction – Scanning electron microscopy – Transmission electron microscopy - Scanning probe microscopy – Chemical characterization: Optical spectroscopy - Electron spectroscopy - Ion spectroscopy.

## Syllabus

**Unit I Concepts of Measurements and Error 10 h**

Measurement - Instrumentation - Classification of instruments - Factors relating to selection of instruments - Functions of instruments - Accuracy, errors and correction - Application of measurement system - Limiting errors - Types of errors - Sources of errors..

**Unit II Electronic and Digital Instruments 10 h**

Essentials of an electronic instrument - Advantages - Electronic voltmeter - Types of electronic voltmeters - Vacuum tube voltmeters - Differential voltmeter (D.C) - Analog and digital system - Basic concepts of digital instruments - Digital voltmeter - Advantages - Characteristics - Applications.

**Unit III Transducers 9 h**

Classification of transducers - Resistive, inductive and capacitive pressure transducer - Linear variable differential transformer (LVDT) - Piezoelectric transducer - Photoelectric transducers - Carbon microphone - Ribbon microphone - Moving coil microphone - Crystal microphone.

**Unit IV Fiber Optics 10 h**

Structure of optical fiber - Classification of optical fiber - Propagation of light - Total internal reflection - Fiber characteristics - Splicing and connector - Fusion splices - Fiber optic communications - Advantage and disadvantage - Application of fiber optic communication.

**Unit V Optoelectronic Devices 9 h**

Spectral response of human eye - Light emitting diode - Photoemissive devices - Photomultiplier tube - Photovoltaic devices - Type photoconductive cells - photodiodes - PN junction - PIN - Avalanche photodiode.

**PREAMBLE**

This course has been designed for students to learn and understand

- The basic characteristics and production of X-rays.
- The fundamental concepts of radiation physics and its applications.
- The concept of radiation therapy techniques and radiation protection devices.

**COURSE OUTCOMES**

On the successful completion of the course, students will be able to

| CO Number | CO Statement  | Knowledge Level |
|-----------|---|-----------------|
| CO1       | Summarize the characteristics and production of X-rays.           | K2              |
| CO2       | Outline the theory of radiation and various radiation chambers.   | K4              |
| CO3       | Explain the principle and function of various imaging system.     | K3              |
| CO4       | Infer the basic radiation therapy techniques.                     | K2              |
| CO5       | Illustrate the various measures and radiation protection devices. | K3              |

Total Credits: 4

Total Instruction Hours: 48 h

### Syllabus

#### Unit I X-Rays 10 h

Electromagnetic spectrum - Production of X-rays - X-ray spectra - Brehmsstrahlung - Characteristics of X-ray - X-ray tubes - Coolidge tube - X-ray tube design - Tube cooling - Stationary Mode - Rotating anode X-ray tubes - Quality and intensity of X-rays - X-ray generator circuits - Half wave and full wave rectification - Filament circuit - Kilo voltage circuit.

#### Unit II Radiation Physics 10 h

Radiation units - Exposure - Absorbed dose - Rad gray - Kera relative biological effectiveness - Effective dose - Inverse square law - Interaction of radiation with matter - Radiation detectors - Thimble chamber - Condenser chambers - Geiger counter - Ionization chamber - Dosimeters - Survey methods - TLD and semiconductor detectors.

#### Unit III Medical Imaging Physics 9 h

Radiological imaging - Radiography - Filters - Grids - Cassette - X-ray film - Film processing - Fluoroscopy - Computed tomography scanner - Generations - mammography - Ultrasound imaging - Magnetic resonance imaging - Thyroid uptake system - Gamma camera (Only Principle, function, and display).

#### Unit IV Radiation Therapy Physics 10 h

Radiotherapy - Kilo voltage machines - Deep therapy machines - Tele-cobalt machines - Basics of teletherapy units - Medical linear accelerator - Radiation protection - External beam characteristics - Phantom - Dose maximum and build up - Bolus - Percentage depth dose - Tissue - Air ratio - Back scatter factor.

#### Unit V Radiation Protection 9 h

Principles of radiation protection - Protective materials - Radiation effects - Somatic, genetic stochastic and deterministic effect, Personal monitoring devices - TLD film badge - Pocket dosimeter.

### PREAMBLE

This course has been designed for students to learn and understand

- The concepts of fundamental laws of quantum mechanics
- The basic Klein-Gordon equation and Dirac equation.
- The concepts of micro and macroscopic properties of the mater.

### COURSE OUTCOMES

On the successful completion of the course, students will be able to

| CO Number | CO Statement  | Knowledge Level |
|-----------|---|-----------------|
| CO1       | Outline on the approximation methods and its applications.                                      | K2              |
| CO2       | Explain the scattering theory and partial wave analysis   | K2              |
| CO3       | Recall on Time independent perturbation theory and its simple applications.                     | K3              |
| CO4       | Discuss the Klein-Gordon equation, Dirac equation and interpretation of negative energy states. | K3              |
| CO5       | Interpret Euler Lagrange's and Hamiltonian formulation.   | K3              |

**Total Credits: 4**

**Total Instruction Hours: 60 h**

### Syllabus

#### Unit I Approximation Methods 12 h

Time Independent Perturbation Theory - Non-Degenerate Energy Levels - First and Second Order - Degenerate Energy Levels - Variation Method: Upper Bound on Ground State Energy - Hydrogen Molecule - Exchange Interaction - WKB Approximation: One Dimensional Schrodinger Equation - Bohr Somerfield Quantum Condition - Barrier Penetration.

#### Unit II Scattering Theory 12 h

Partial Waves - Significant Number of Partial Waves - Partial Wave Analysis - Asymptotic Behavior of Partial Waves - Phase Shifts - Scattering Amplitudes in Terms of Phase Shifts - Differential and Total Cross Section: Optical Theorem - Phase Shifts: Relation to The Potential - Transformation from Centre of Mass to Lab Frame.

#### Unit III Time Dependent Perturbation Theory 12 h

Introduction - Transition probabilities - Constant and Harmonic perturbations - Transition probabilities - Fermi's golden rule - Selection rules for dipole radiation - Adiabatic approximation - Sudden approximation - Magnetic resonance - Semi-Classical treatment of an atom with electromagnetic radiation.

#### Unit IV Relativistic Quantum mechanics 12 h

Klein-Gordon Equation and Its Interpretation - Equation of Continuity - Dirac Equation for A Free Particle - Dirac Matrices - Covariant Form of Dirac Equation - Probability Density - Plane Wave Solutions - Interpretation of Negative Energy States - Antiparticle - Spin of Dirac Particle.

#### Unit V Classical Fields and Second Quantization 12 h

Classical Fields - Euler Lagrange Equations - Hamiltonian Formulation - Noether's Theorem - Quantization of Real and Complex Scalar Fields: Creation, Destruction and Number Operators - Fock States - Second Quantization of K.G. Field.

Total Instruction Hours: 60 h

### Syllabus

#### Unit I Electrostatics 12 h

Coulomb's law - The electric field - Line, Flux and Gauss's Law - Divergence of  $E$  - Application of Gauss's law - Curl of  $E$  - Poisson's equation - Laplace's equation - Work and energy in electrostatics: Energy of a point charge distribution - Energy of continuous charge distribution - Induced charges - Capacitors - Laplace equation in one dimension and two dimensions - Electric Fields in matter: Dielectrics - Induced dipoles - Gauss's Law in the presence of dielectrics.

#### Unit II Magnetostatics 12 h

Lorentz force - Magnetic fields - Magnetic forces - Currents - Biot-Savart Law - Divergence and curl of  $B$  - Ampere's Law - Comparison of magnetostatics and electrostatics - Magnetic vector potential - Effect of magnetic field on atomic orbit - Ampere's Law in magnetized materials - Ferromagnetism.

#### Unit III Electromotive Force 12 h

Motional emf - Electromagnetic induction - Faraday's Law - Induced electric field - Inductance - Energy in magnetic field - Maxwell's equation in free space and linear isotropic media - Boundary conditions - Continuity equation - Poynting theorem. Waves in one dimension: Wave equation - Sinusoidal waves - Reflection and transmission - Polarization.

#### Unit IV Electromagnetic Waves 12 h

The wave equation for  $E$  and  $B$  - Monochromatic Plane waves - Energy and momentum in electromagnetic waves - Electromagnetic waves in matters - TE waves in rectangular wave guides - The co-axial transmission line - Scalar and vector potentials - Gauge transformation - Coulomb Gauge and Lorentz Gauge - Lorentz force law in potential form.

#### Unit V Relativistic Electrodynamics 12 h

Four vectors and Tensors - Transformation equations for charge and current densities - Transformation equations for the Electromagnetic Potentials - The Electromagnetic Field Tensor - Transformation Equations for Electric and Magnetic

field Vectors – Covariance of Maxwell Equations in four Vector forms and in four Tensor forms – Covariance and Transformation Law of Lorentz Force.

## Syllabus

**Unit I Free Electrons in Crystal****9 h**

Electrons Moving In 1D Potential Well - Fermi Dirac Statistics - Electrical Conductivity of Metals - Relaxation Time and Mean Free Path - Electrical Conductivity and Ohms Law - Wiedemann Franz Lorentz Law - Electrical Resistivity of Metals - The Hall Effect

**Unit II Thermal and Optical Properties of Materials****9 h**

The Specific Heat of Solids - Debye Model - Thermal Conductivity of Solids - Thermal Conductivity Due to Electrons Thermal Conductivity Due Phonons - Thermal Resistance of Solids - Photoconductivity - Photoelectric and Photovoltaic Effect - Photoluminescence.

**Unit III Semiconducting and Dielectric Properties of Materials****10 h**

Free Carrier Concentration in Semiconductors - Fermi Level and Carrier Concentration in Semiconductors - Mobility of Charge Carriers - Effect of Temperature on Mobility - Dipole Moment - Local Electric Field at An Atom - Dielectric Constant and Its Measurement - Polarizability - Classical Theory of Electronic Polarizability - Dipolar Polarizability - Piezo-Pyro Ferro Electric Properties of Crystals - Ferroelectricity.

**Unit IV Magnetic Properties of Materials****10 h**

Classification of Magnetic Materials - Atomic Theory of Magnetism - The Quantum Numbers - Origin of Permanent Magnetic Moments - Langevin's Classical Theory of Diamagnetism and Paramagnetism - Fundamental Quantum Theory of Paramagnetism - Ferromagnetism - Weiss Molecular Field - Temperature Dependence of Spontaneous Magnetization - Ferromagnetic Domain - Domain Theory - Antiferromagnetism - Ferrimagnetism and Ferrites.

**Unit V Theory of Superconductors****10 h**

Sources of Superconductivity - Response of Magnetic Field - Meissner Effect - Thermodynamics of Superconducting Transitions - Origin of Energy Gap - Isotope Effect - London Equations - London Penetration Depth - Coherence Length -

| 232PY2A3CD | MICROPROCESSORS AND MICROCONTROLLER | SEMESTER III |
|------------|-------------------------------------|--------------|

**Total Credits: 3**

**Total Instruction Hours: 48 h**

### Syllabus

#### **Unit I      Microprocessors 8085 Architecture and Programming      10 h**

Intel 8085 microprocessor - Architecture of 8085 - 8085 Microprocessor Unit - Data transfer operations - Arithmetic operations - Logical operations - Branching and machine control operations - Addressing modes - Writing assembly language programs: Looping, counting and indexing - Counters and time delays - Stack - Subroutine.

#### **Unit II      Interfacing of Microprocessor 8085      10 h**

General purpose programmable Peripheral device: 8255A Programmable Peripheral Interface(PPI) - Block diagram - Mode 0 - BSR mode - A/D converter - 8257 DMA controller - Interfacing - Programming and Execution - Basic concept in serial I/O - Interfacing requirements - Transmission format - Synchronous Vs Asynchronous Transmission.

#### **Unit III      8086 Microprocessor      09 h**

Features of 8086 - Architecture - Pins and signals - Minimum mode and maximum mode signals - External memory addressing - 8 bit data transfer - 16 bit data transfer - Interrupt processing - Response to interrupt - Classification of interrupt - Interrupt priority. Addition, subtraction and multiplication programs.

#### **Unit IV      Microcontroller 8051 Architecture and Programming      10 h**

Features of microcontroller and 8051 - Difference between microprocessor and microcontroller - 8051 Architecture - Pins and signals 8051- Memory organization - Special function register (SFR) - 8051 Interrupts - Execution - Sources - Enabling and disability - Priority- Timing- Level of Interrupts - Data types and directives Instruction set - Addition, subtraction and multiplication programs.

#### **Unit V      Interfacing of Microcontroller 8051      09 h**

LCD Interfacing: LCD operation - LCD pin descriptions - LCD Addressing- Keyboard Interfacing - ADC Interfacing: ADC devices - ADC 0804 Chip - Programming ADC 0804 in Assembly - DAC Interfacing: DAC 0808 - Current to voltage in DAC0808 - Sensor Interfacing: Temperature sensor - Signal conditioning and interfacing the LM35 to 8051.

Total Credits: 2

Total Instructions Hours: 48 h

| S.No | Contents   |
|------|--|
| 1    | Construct the Wien Bridge Oscillator using OP-AMP and verify the output performance by digital cathode ray oscilloscope. |
| 2    | Construct Binary added weighted resistor - using OP-AMP.   |
| 3    | Construct Binary adder and Subtractor using IC 7483 and IC 7486.   |
| 4    | Verify the characteristics of Photodetector using digital multimeter   |
| 5    | Study the characteristics of voltage doubler using digital voltmeter   |
| 6    | Design of Saw tooth wave generators using OPAMP  |
| 7    | Study the characteristics of SCR.  |
| 8    | Construct monostable multivibrator using Op-AMP/NE 555.  |
| 9    | Characteristics of Tunnel Diode 1N3716.  |
| 10   | Construct half-adder and full-adder circuits using NAND gates and study their performance.                               |
| 11   | Construct voltage regulated power supply using Zener diode.  |
| 12   | Construct the amplifier using JFET.  |

**Note:** Any 10 Experiments

| 232PY2A3DA  | CRYSTAL GROWTH AND THIN FILM TECHNIQUES | DSE      | 4 | - | - | 4      |

#### PREAMBLE

This course has been designed for students to learn and understand

- The various experimental techniques for crystal growth.
- Choose various growth techniques for thin film deposition.
- Summarize various characterization techniques like XRD, SEM, TEM, AFM.

#### COURSE OUTCOMES

On the successful completion of the course, students will be able to

| CO Number | CO Statement  | Knowledge Level |
|-----------|---|-----------------|
| CO1       | Develop the concepts of crystal growth technique through Nucleation.                        | K3              |
| CO2       | Relate the various experimental techniques for crystal growth.                              | K2              |
| CO3       | Identify various preparation methods like gel, melt and vapor growth techniques of crystal. | K3              |
| CO4       | Construct the thin films deposition in various techniques.                                  | K3              |
| CO5       | Analyze the various characterization techniques for both crystal and thin film samples.     | K4              |

Total Credits: 4

Total Instruction Hours: 48 h

### Syllabus

#### Unit I Basic Concepts and Nucleation Phenomenon 10 h

Crystals - Classes of crystal system - Crystal symmetry - Single crystal - Growth of crystal - Historical perspective. Nucleation Phenomena: Critical Supersaturation - Homogeneous Nucleation - Heterogeneous Nucleation - Nucleation on a Substrate - Nucleation of a Crystalline Material - Equilibrium Shape of Anisotropic Nuclei.

#### Unit II Crystallization Principles and Growth Techniques 10 h

Solvents and solutions - Solubility diagram - Metastable zone and induction period - Miers TC diagram - Solution growth - Low and high temperatures solution growth - Slow cooling and solvent evaporation methods - Two-Dimensional Layer Growth Mechanism.

#### Unit III Gel, Melt and Vapor Growth Techniques 10 h

Principle of gel technique - Various types of gel - Structure and importance of gel Methods of gel growth and advantages - Melt technique - Czochralski growth - Bridgeman method - Horizontal gradient freeze - Hydrothermal growth - Vapor phase growth - Physical vapor deposition - Chemical vapor deposition.

#### Unit IV Thin Film Deposition Techniques 9 h

Vacuum evaporation - Hertz-Knudsen equation - Evaporation from a source and film thickness uniformity - E-beam, pulsed laser and ion beam evaporations - Mechanisms and yield of sputtering processes - DC, magnetically enhanced, reactive sputtering - Spray pyrolysis - Electro deposition - Sol-gel technique.

#### Unit V Characterization Techniques 9 h

X-ray diffraction - Powder and single crystal - Fourier transform infrared analysis - Elemental dispersive X-ray analysis - Transmission and scanning electron microscopy - UV-Vis-NIR spectrometer - Vickers micro hardness - Basic principles and operations of AFM and STM - X-ray photoelectron spectroscopy for chemical analysis - Photoluminescence.

Total Credits: 4

Total Instruction Hours: 48 h

### Syllabus

#### Unit I Instrumental Methods and Measurements 10 h

Classification of instrumental techniques - Basic functions of instrumentation - Sensitivity and detection limit - Hardware techniques for signal-to-noise enhancement - Software techniques for signal-to-noise enhancement - Evaluation of results - Accuracy and instrument calibration.

#### Unit II Thermal Analysis 10 h

Thermo gravimetric analysis: Instrumentation - Applications - Differential Thermal analysis: Instrumentation - General Principles - Applications - Differential Scanning Calorimetry: Instrumentation - Applications - Microthermal analysis - Dynamic Mechanical Analysis.

#### Unit III X-ray Analysis 9 h

Production of X-rays and X-ray spectra - Instrumentation - X-ray Absorption methods - X-ray Fluorescence method - X-ray Diffraction: Reciprocal lattice concept - Diffraction patterns - Automatic Diffractometers - Choice of X-radiation - X-ray powder data file - Quantitative analysis - Structural applications - Crystal topography.

#### Unit IV Optical and Microscopic Analysis 9 h

Ultraviolet-Visible Molecular Absorption spectrometry: Measurement of Transmittance and Absorbance - Beer's law - Instrumentation: Instrument components - Single beam instruments - Double beam instruments - Qualitative applications of U-V Absorption spectroscopy: Solvents - Detection of functional groups - Electron spectroscopy: X-ray photoelectron spectroscopy: Principle - Instrumentation - Applications - Scanning Tunneling Microscope: Principle - Instrumentation - Atomic Force microscope: Principle - Instrumentation.

#### Unit V Electrical Methods 10 h

Electrochemical cells - Potentiometry: General principles - Reference electrodes - Ion-selective Field-Effect-Transistors - Molecular selective electrode systems - Instruments for selecting cell potentials - Coulometry: CV relationships during an electrolysis - Coulometric methods of analysis - Voltammetry: Voltametric Instrumentation: Cyclic voltammetry - Applications of voltammetry.

#### PREAMBLE

This course has been designed for students to learn and understand

- The concepts of nuclear radiation towards biological effect and protection.
- The principles of optimization and detection of radiation.
- The safety aspects of nuclear radiation.

#### COURSE OUTCOMES

On the successful completion of the course, students will be able to

| CO Number | CO Statement  | Knowledge Level |
|-----------|---|-----------------|
| CO1       | Interpret the structure of atomic nucleus.                                | K2              |
| CO2       | Make use of the principles of radioactivity into handling radio-isotopes. | K2              |
| CO3       | Identify various radiations interacting with matter.                      | K3              |
| CO4       | Classify various types of detector principles for nuclear radiation.      | K3              |
| CO5       | Take part in implementing the safety aspects principles.                  | K3              |

### Syllabus

#### Unit I General Properties of Atomic Nucleus 10 h

Scattering of Alpha-particles - Nuclear size and Determination : Nuclear Force Methods, Electromagnetic Methods - Mass spectroscopy - Basic Components of Mass Spectroscopes - Double Focussing Mass spectrograph - Double Focussing Mass spectrometer - Doublet Method of mass spectroscopy - Mass Synchrometer - Theories of Nuclear Compositions

#### Unit II Radioactivity and Isotopes 9 h

Law of radioactive Disintegration - Displacement laws of Soddy Russell and Fajans - Law of successive Transformation - Radioactive Equilibrium - Radioactive Branching - Dosimetry - Induced Radioactivity by Nuclear Bombardment - Mixture of Activities - Radio-isotope Therapy - Measurements of Decay Constants - Isotopes (Separation and Uses).

#### Unit III Interactions Nuclear Radiations with Matter 10 h

Interaction of Charged Particles with Matter - Stopping Power of Heavy Charged Particles - Range and Straggling - Stopping Power and Range of Electrons - Cerenkov Radiation - Synchrotron Radiation - Absorption of Gamma Rays (Thomson, Rayleigh and Delbruck Scattering) - Photoelectric effect - Compton effect - Pair Production

#### Unit IV Detection and Measurement of Nuclear Radiations 10 h

Ionization chamber - Semiconductor Detectors - Diffused Junction detector - Surface Barrier detector - Lithium drifted Junction detector - Regions of multiplicative operation - Proportional Counter - Geiger Muller Counter (Quenching of Discharge) - Scintillation Counters (Photomultiplier tube, Scintillators, Pulse Formation, Resolving Power)

#### Unit V Safety Concepts 9 h

Radiation units- Equivalent dose - Effective dose-Committed dose- Collective dose - Genetically significant dose - Detriment - Annual limit on intake- ALARA - Sources of Radiation - Interaction of radiation with tissue - Radiation risk - Sources of exposure - Leakage limits - Personnel monitoring - Film badge Thermoluminescent dosimeter- Pocket dosimeter.

Total Credit: 1

### Syllabus

#### Unit I Introduction to IPR

Introduction to intellectual property right (IPR), Physical and Intellectual Property, Tangible and Intangible property, Traditional Knowledge, Different types of intellectual property rights (IPR), Patents, Trade mark, Trade secret, Copyright, Design and Geographical Indications.

#### Unit II International Instruments of IPR

World Trade and IPR-General Agreement on Trade and Tariff (GATT), World Intellectual Property Organization (WIPO), World Trade Organizations (WTO), Trade-Related Aspects of Intellectual Property Rights (TRIPS), Establishment, functions and guidelines of GATT, WIPO, WTO and TRIPS.

#### Unit III Indian Patent Act

Patent Act 1970-amendments of 1999, 2000, 2002 and 2005, Patentable subject matter, Patentability criteria, non-patentable inventions, Compulsory licenses.

#### Unit IV IPR Infringement

Infringement-direct, contributory and induced, Infringer, Defences to infringement, Remedies for infringement (civil and criminal) and penalties, Appellate Board.

#### Unit V Current Scenario

India's New National IP Policy, 2016-Govt. of India, Step towards promoting IPR, Govt. Schemes in IPR, Career Opportunities in IP, IPR in current scenario with case studies, Advantages and disadvantages of IPR.

### Syllabus

#### Unit I Introduction

Definition of nanoscience- Importance of nanoscience - Physical and chemical properties - Electronic - Structural - Mechanical - Optical - Magnetic properties - Applications.

#### Unit II Conduction in confined geometries

Nanomaterials - 2D, 1D, 0D - size and dimensionality effects - Partial confinement - Properties dependent on density of states - Quantum dots

#### Unit III Preparation of Nanomaterials

Top down and bottom up approach - Plasma arcing - Hydrothermal- Sol gel process - Ball milling - Sputtering - Electro deposition.

#### Unit IV Characterization Techniques

X-ray Diffraction (XRD) - Scanning Electron Microscopy (SEM) - Transmission Electron Microscopy (TEM) - Absorption spectroscopy - FTIR spectroscopy - Photoluminescence (PL).

#### Unit V Significant Nanomaterials and Applications

Nano electronics - Nanobots - Biological applications of nanoparticles - Carbon nanotubes (CNTs) - Nano mechanics.

#### PREAMBLE

This course has been designed for students to learn and understand

- The fundamental knowledge on the structure and dynamics of the molecules through various theories
- The relation between molecular interactions and properties
- The phenomenological theories on reaction dynamics and transport properties

#### COURSE OUTCOMES

On the successful completion of the course, students will be able to

| CO Number | CO Statement  | Knowledge Level |
|-----------|---|-----------------|
| CO1       | Outline the molecular structure and bonding                                   | K1              |
| CO2       | Interpret the molecular symmetry  | K2              |
| CO3       | Illustrate with the molecular interaction and mechanics                       | K2              |
| CO4       | Identify the molecular reaction dynamics                                      | K3              |
| CO5       | Examine quantum theory to electron transfer, electronic structure and spectra | K3              |

Total Credits: 4

Total Instruction Hours: 60 h

## Syllabus

**Unit I      Molecular Structure and Bonding      12 h**

Chemical bonding - The VSEPR model - Valence bond theory - The hydrogen molecule - Polyatomic molecules - Molecular orbital theory - Bond properties - Polyatomic molecules - Molecular shape in terms of molecular orbitals - Molecular structure, properties and conformations.

**Unit II      Molecular Symmetry      12 h**

Symmetry elements and operations - The symmetry classification of molecules - Applications to molecular orbital theory - Character tables and symmetry labels - Vanishing integrals and orbital overlap - Vanishing integrals and selection rule.

**Unit III      Molecular Interactions and Mechanics      12 h**

Electric properties of molecules - Electric dipole moments - Polarizabilities - Relative permittivity's - Interactions between dipoles - Repulsive and total interactions - Molecular interactions in gases - Potential energy (force field) in molecular mechanics.

**Unit IV      Molecular Reaction Dynamics      12 h**

Potential energy surfaces - Transition state theory - The Eyring equation - Thermodynamic aspects - Microscopic - Macroscopic connection - Zero-point vibrational energy - Molecular electronic, rotational, vibrational and translational partition functions.

**Unit V      Electron Transfer, Electronic Structure and Spectra      12 h**

The rates of electron transfer processes - Theory of electron transfer processes - Crystal-field theory - Ligand-field theory - Electronic spectra of atoms - Electronic spectra of complexes - Charge-transfer bands.

| 232PY2A4CB  | NUCLEAR AND ELEMENTARY PARTICLE PHYSICS | CORE     | 4 | 1 | - | 4      |

#### PREAMBLE

This course has been designed for students to learn and understand

- The principles and concepts governing nuclear and particle physics.
- The forces and reactions involved in nuclear particles.
- The concepts of radioactivity decay and elementary particles.

#### COURSE OUTCOMES

On the successful completion of the course, students will be able to

| CO Number | CO Statement   | Knowledge Level |
|-----------|--|-----------------|
| CO1       | Interpret the various properties of nuclei and nuclear forces. | K2              |
| CO2       | Identify the type of nuclear decay and their measurements.     | K3              |
| CO3       | Examine the radioactive elements and its disintegration.       | K3              |
| CO4       | Analyze the nuclear reaction dynamics.                         | K4              |
| CO5       | Explain the concepts of elementary particles.                  | K2              |

| 232PY2A4CB | NUCLEAR AND ELEMENTARY PARTICLE PHYSICS | SEMESTER IV |
|------------|---|-------------|

Total Credits: 4

Total Instruction Hours: 60 h

### Syllabus

#### Unit I Properties of Nucleus and Nuclear forces 12 h

Nuclear constituents - Nuclear size - Nuclear mass - Nuclear binding energy curve and stability of nuclei - Nuclear magnetic dipole moment - Electric quadrupole moment - Nuclear spin - Parity - Deuteron - Theory of ground state of deuteron - Nucleon-nucleon scattering - Scattering cross section - Spin dependence of nuclear forces

#### Unit II Nuclear Decay 12 h

Determination of energy of alpha particles - Alpha ray spectra and nuclear energy levels - Gamow's theory - Beta decay process - Measurement of beta ray energies - Beta ray spectra - Selection rules in beta decay - Fermi theory of beta decay - Absorption of gamma ray by matter - Measurement of gamma ray energies - Internal conversion

#### Unit III Radio Activity 12 h

Properties of alpha, beta and gamma rays - Mean life of a radioactive element - Half-life period - Determination of decay constant and half-life - Soddy's displacement law - Radioactive series - Law of successive disintegration and radioactive equilibrium - Properties of radioactive rays - Radioactive decay - Radioactive dating

#### Unit IV Nuclear Reactions 12 h

Conservation laws in nuclear reactions - Q value - Threshold energy - Nuclear Transmutation - Nuclear reaction cross section - Types of nuclear reactions - Compound nucleus theory - Breit Wigner dispersion formula - Direct reaction - Nuclear fission - Energy released in fission - Nuclear chain reaction - Four factor formula - Nuclear fusion - Stellar energy.

#### Unit V Particle Physics 12 h

Production of new particles in high energy reaction - Classification of elementary particle - Fundamental interaction - Quantum numbers - Law in production and decay process - Symmetry and conservation laws - Special symmetric groups - Gelman-Neumann theory - Quark model

### Syllabus

#### Unit I Fundamentals of Semiconductors 09 h

Semiconductor as solar cell material - Formation of energy bands - Charge carriers in semiconductors - Carrier concentration and distribution - Carrier motion in semiconductors - Drift-Motion due to Electric field - Generation of carriers - Recombination of carriers.

#### Unit II Solar Cells 11 h

Solar cell parameters - Open circuit voltage - Short circuit current - Fill Factor - Efficiency of solar cells - Effect of series and shunt resistance on efficiency - Effect of solar radiation on efficiency - Requirements for high short circuit current - Minimization of optical losses and recombination - Requirement for high open circuit voltage - Design for high FF - Solar simulator: I-V Measurement - Quantum efficiency measurement.

#### Unit III First Generation Solar Cells 09 h

Amorphous silicon: The first bipolar amorphous semiconductor - Designs for amorphous silicon solar cells - Staebler Wronski effect - Atomic and electronic structure of hydrogenated amorphous silicon: Deposition techniques - RF glow discharge deposition - Glow discharge deposition at different frequencies - Hot wire chemical vapor deposition.

#### Unit IV Second Generation Solar Cells 09 h

CdTe properties and thin films - Fabrication methods - Condensation, Reaction of Cd and Te vapors on a surface - Galvanic reduction of Cd and Te ions at a surface - Precursor reaction at a surface - Window Layers - CdTe absorber layer and cadmium chloride treatment - CdS/CdTe intermixing - Back contact - Solar cell characterization - CdTe modules.

#### Unit V Third Generation Solar Cells 10 h

Operating mechanism of dye-sensitized solar cell - Materials - Performance of highly efficient DSSCs - Electron transfer processes and charge recombination in DSSC - Organic-Inorganic perovskites for photovoltaics - Deposition methods - Electronic properties - Device operation - Ongoing challenges - Lead-free alternatives.

## Syllabus

### Unit I      Conduction in Metals 09 h

Electron volt - Unit of energy - Current density - Motion in a magnetic field - Nature of the atom - Energy band theory of crystals - Insulators - Semiconductors - Conductors - Conduction in metals - Potential energy field in a metal - Bound and free electrons - Energy density - Fermi level - Density of states.

### Unit II      Theory of Semiconductors 11 h

Electrons and holes in an intrinsic semiconductor - Conductivity of a semiconductor - Carrier concentrations in an intrinsic semiconductor - Donor and acceptor impurities - Fermi level in a semiconductor having impurities - Diffusion - Carrier lifetime - The continuity equation.

### Unit III      Semiconductor Diode Characteristics 09 h

Qualitative theory of the p-n junction- The p-n junction as a diode - Band structure of an open - Circuited p-n junction - The current components in a p-n diode - Ohmic contacts - Open circuited p-n junction - Theory of p-n diode forward and reverse currents - The schottky barrier diode - The schottky effect

### Unit IV      Excess Carriers in Semiconductors 09 h

Optical absorption - Luminescence - Photoluminescence - Electroluminescence - Carrier lifetime and Photoconductivity - Direct recombination of electrons and holes - Indirect recombination of electrons and holes - Steady state carrier generation - Photoconductive devices - Diffusion of carriers - Diffusion processes - The Haynes-Shockley experiment.

### Unit V      Optoelectronic Devices 10 h

Photo diodes - Current and voltage in an illuminated junction - Solar cells - Photodetectors - Gain, Bandwidth, and Signal-to-Noise ratio of photodetectors - Light-Emitting diodes - Light-Emitting materials - Lasers - The basic semiconductor laser - Heterojunction lasers.

| Course Code | Course Name    | Category | L | T | P | Credit |
|-------------|----------------|----------|---|---|---|--------|
| 232PY2A4DC  | PLASMA PHYSICS | DSE      | 4 | - | - | 4      |

### PREAMBLE

This course has been designed for students to learn and understand

- The concepts of plasma physics.
- The theoretical aspects in the production of plasma and its confinement.
- The working principle behind the applications of Plasma.

### COURSE OUTCOMES

On the successful completion of the course, students will be able to

| CO Number | CO Statement   | Knowledge Level |
|-----------|--|-----------------|
| CO1       | Summarize the basic concepts of plasma.              | K2              |
| CO2       | Infer the characteristics of plasma.                 | K2              |
| CO3       | Analyze the confinements in plasma.                  | K4              |
| CO4       | Classify the different waves of plasma.              | K2              |
| CO5       | Identify the different applications of plasma waves. | K3              |

### MAPPING WITH PROGRAMME OUTCOMES

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 |
|---------|-----|-----|-----|-----|-----|
| CO1     |     | ✓   |     |     | ✓   |
| CO2     |     | ✓   |     |     | ✓   |
| CO3     | ✓   |     | ✓   | ✓   |     |
| CO4     |     | ✓   |     |     | ✓   |
| CO5     |     | ✓   |     |     | ✓   |

### COURSE FOCUSES ON

|                                     |                               |                                     |   |
|-------------------------------------|-------------------------------|-------------------------------------|---|
| <input checked="" type="checkbox"/> | Skill Development             | <input type="checkbox"/>            | Entrepreneurial Development                 |
| <input checked="" type="checkbox"/> | Employability                 | <input checked="" type="checkbox"/> | Innovations                                 |
| <input type="checkbox"/>            | Intellectual Property Rights  | <input type="checkbox"/>            | Gender Sensitization                        |
| <input type="checkbox"/>            | Social Awareness/ Environment | <input type="checkbox"/>            | Constitutional Rights/ Human Values/ Ethics |

|            |                |             |
|------------|----------------|-------------|
| 232PY2A4DC | PLASMA PHYSICS | SEMESTER IV |
|------------|----------------|-------------|

Total Credits: 4

Total Instruction Hours: 48 h

## Syllabus

**Unit I Plasma Concepts 9 h**

Plasma as state of matter - Debye shielding - Criteria for plasma - Magnetic pressure - Particle drifts - Plasma frequency - Landau damping - Collisions - Bohm diffusion - Plasma radiation.

**Unit II Characteristics of Different Plasma 10 h**

Production of plasma: Low pressure cold cathode discharge - Thermionic arc discharge - Plasma guns - Q machines - RF produced plasma - Current and voltage measurement in plasmas - Plasma probes: Electrostatic probe - Magnetic probe - Measurement types - Photography and atomic spectroscopy - Radiation measurements - Single particle measurements - Neutrons measurement - Light scattering measurement.

**Unit III Plasma Confinement 10 h**

Motion in a magnetic field - Motion in finite electric and magnetic field - Motion in inhomogeneous and curved magnetic fields - Magnetic mirrors - Motion in non-uniform electric field - Motion in time varying electric and magnetic field.

**Unit IV Waves in Plasma 10 h**

Wave representation - Group velocity - Phase velocity - Plasma oscillations - Electromagnetic waves in the absence of magnetic field - Electromagnetic waves perpendicular to magnetic field - Electromagnetic waves parallel to magnetic field - Electron plasma wave in cold and warm plasma - Ion acoustic wave.

**Unit V Applications of Plasma 09 h**

Gas discharges - Thermonuclear fusion - Laser driven fusion - Magnetic fusion - Magnetohydrodynamic generator (MHD) - Basic theory of MHD - Principle of working - Plasma diode.
