

Dr. N.G.P. ARTS AND SCIENCE COLLEGE (Autonomous)

**REGULATIONS 2026-27 for Post Graduate Programme
(Outcome Based Education model with Choice Based Credit System)**

M.Sc. Degree

(For the students admitted during the academic year 2026-27 and onwards)

Programme: M.Sc. Physics

Eligibility:

A pass in the course of B.Sc. Degree Examination with Physics as Major and Mathematics and Chemistry as Ancillary subjects, or an examination accepted as equivalent there to accept by the academic council.

Programme Educational Objectives:

The Curriculum is designed to attain the following learning goals which students shall accomplish by the time of their graduation:

1. To produce graduates with advanced knowledge in Physics and requisite skills, in order to use their knowledge in Physics in a wide range of practical applications.
2. To develop creative thinking and the power of imagination to enable graduates work in research in academia and industry for broader applications.
3. To relate the training of Physics graduates to the employment opportunities within the country.
4. To promote societal values through Physics related activities.

PROGRAMME OUTCOMES:

On the successful completion of the program, the following are the expected outcomes.

PO Number	PO Statement
PO1	Apply theoretical knowledge of principles and concepts of Physics to practical problems.
PO2	Develop skills in planning and carrying out advanced physics experiments.
PO3	Solve scientific problems by applying a combination of theory, numerical simulation, and experiments.
PO4	Relate critically to scientific models.
PO5	Examining specific phenomena theoretically and experimentally, to contribute to the generation of new scientific insights or to the innovation of new applications of physics research.

PG Credit Distribution:

Part	Subjects	No. of Papers	Credit	Semester No.
III	Core	14	Theory: $11 \times 04 = 44$ $02 \times 03 = 06$	I-IV
		06	Practical: $06 \times 02 = 12$	
	Elective	04	$04 \times 04 = 16$	I-IV
	EDC	01	$01 \times 04 = 04$	II
	Industrial Training		02	III
	Project Work	01	$01 \times 08 = 08$	IV
TOTAL CREDITS			92	-

DISCIPLINE SPECIFIC ELECTIVE

Students shall select the desired course of their choice in the listed elective course during
Semesters I - IV

Semester I (Elective I)

List of Elective Courses

S. No	Course Code	Course Name
1	26PYP1DA	Energy Physics
2	26PYP1DB	Materials Physics and Processing Techniques
3	26PYP1DC	Laser Physics and Nonlinear Optics

Semester II (Elective II)

List of Elective Courses

S. No	Course Code	Course Name
1	26PYP2DA	Physics of Nanomaterials
2	26PYP2DB	Experimental Design
3	26PYP2DC	Medical Physics

Semester III (Elective III)

List of Elective Courses

S. No	Course Code	Course Name
1	26PYP3DA	Crystal Growth and Thin Film Techniques
2	26PYP2DB	Instrumental Methods of Analysis
3	26PYP3DC	Radiological Safety Aspects

Semester IV (Elective IV)

List of Elective Courses

S. No	Course Code	Course Name
1	26PY2A4DA	Solar Cells
2	26PY2A4DB	Band gap Engineering in Semiconductors
3	26PY2A4DC	Plasma Physics

EXTRA CREDIT COURSES

The following are the courses offered under self study to earn extra credits:

S. No	Course Code	Course Name
1	26PYPSSA	IPR, Innovation and Entrepreneurship
2	26PYPSSB	Nanoscience

Semester – I CORE - I: MATHEMATICAL PHYSICS							
Semester	Course Code	Course Name	Category	L	T	P	Credits
I	26PYP1CA	MATHEMATICAL PHYSICS	CORE - I	48	12	-	4

Preamble	This course has been designed for students to learn and understand • The concept of matrices, types of linear equations and complex variables • Develop expertise in special functions and partial differential equations • To learn the basics of tensors and develop the character table using group theory	
Prerequisite	Basic Knowledge in Mathematics	
Course Outcomes (COs)		
CO Number	Course Outcomes (COs) Statement	Bloom's Taxonomy Knowledge Level
CO1	Summarize the concept of matrices and vector	K2
CO2	Calculate the definite integrals using complex variables	K3
CO3	Explain the special function in terms of various polynomials	K4
CO4	Evaluate the differential equations for first and second order equations	K5
CO5	Predict the concept of tensors and group theory	K6

Mapping with Program Outcomes:					
Cos / POs	PO1	PO2	PO3	PO4	PO5
CO1	S	M	S	S	M
CO2	M	S	M	S	S
CO3	S	M	S	M	M

CO5	S	S	M	S	S

26PYP1CA	MATHEMATICAL PHYSICS
----------	----------------------

Syllabus

Unit	Content	Hrs	Resources
I	Matrices and Vectors Rank of a matrix and some of its theorems (Normal Form, Triangular Form) - Types of linear equations - Solution to linear homogeneous and non-homogeneous equations - Vectors: Linear dependence and independence of vectors - Linear dependence and independence of vectors by rank method - Inner product space - Orthogonal vectors - Orthonormal vectors - Gram-Schmidt orthogonalization process.	12	Text Book
II	Complex Variable Analytical functions - Cauchy-Riemann equations - Line integrals - Cauchy's theorem - Cauchy integral formula - Taylor's and Laurent's expansions - Cauchy's residue theorem - Poles - Evaluation of residues	12	Text Book
III	Special Functions Legendre's differential equations: Legendre polynomials - Generating functions - Recurrence relation - Bessel's differential equation: Bessel polynomials - Generating functions - Recurrence relation - Hermite differential equation: Hermite polynomials - Generating functions - Recurrence relation	12	Text Book
IV	Differential Equations and Partial Differential Equations Differential Equations: Linear ordinary differential equations - First order and second order equations and their various solutions - Partial differential equations: Solution of Laplace equation - Solution of wave and heat equations in two dimensions - Poisson and Helmholtz equations - Diffusion and wave equations.	12	Text Book
V	Tensor and Group theory Tensors: Contravariant - Covariant - Mixed tensors - Addition and subtraction of tensors - Symmetry and Antisymmetry tensor - Quotient rule - Pseudo tensors. Group theory: Subgroups - Classes - Cyclic groups - Abelian groups - Cosets - Homomorphism and isomorphism - Reducible and irreducible representations - Character table for simple molecular types (C_{2v} and C_{3v} point group).	12	Text Book
	TOTAL	60	

Note: Case studies related to the above topics to be discussed (Examined Internal only)

CORE - II: THERMODYNAMICS AND STATISTICAL MECHANICS							
Semester	Course Code	Course Name	Category	L	T	P	Credits
I	26PYP1CB	THERMODYNAMICS AND STATISTICAL MECHANICS	CORE - II	48	12	-	4

Preamble	This course has been designed for students to learn and understand • The concepts of microstates, macrostates and ensembles • The various statistical distributions and transport phenomenon • The concepts of phase transitions and thermodynamic functions
Prerequisite	Knowledge in Heat and Thermodynamics

Course Outcomes (Cos)		
CO Number	Course Outcomes (COs) Statement	Bloom's Taxonomy Knowledge Level
CO1	Relate the thermodynamics, microstates through thermodynamics postulates, quantities, and relations	K2
CO2	Identify the micro and macroscopic properties of the matter	K3
CO3	Analyze the classical and quantum distribution laws and their relations	K4
CO4	Assess the transport properties and understand equilibrium and non-equilibrium process.	K5
CO5	Compile and evaluate the heat capacities, Ising model through phase transitions.	K6

26PYP1CB	THERMODYNAMICS AND STATISTICAL MECHANICS
----------	---

Syllabus

Unit	Content	Hrs	Resources
I	Thermodynamics, Microstates and Microstates Basic postulates of thermodynamics – Fundamental relations and definition of intensive variables – Intensive variables in the entropic formulation – Equations of state – Euler relation – Densities – Gibbs-Duhem relation for entropy – Microstates and macrostates – Ideal gas – Liouville's Theorem	12	Text Book
II	Microcanonical, Canonical and Grand Canonical Ensembles Microcanonical distribution function – Two level system in microcanonical ensemble – Gibbs paradox – The canonical distribution function – Partition function and free energy of an ideal gas – Relation between grand canonical and canonical partition functions	12	Text Book
III	Distributions Functions and Fermi Energy Maxwell Boltzmann – Bose Einstein and Fermi Dirac distributions – Non interacting Bose gas and thermodynamic relations – Chemical potential of bosons – Non interacting Fermi gas and thermodynamic relations – Fermi gas at zero and low temperature – Fermi energy – Fermi momentum.	12	Text Book
IV	Transport Processes Derivation of Boltzmann transport equation – Representation of states – Free streaming – Collision term – Equilibrium distribution – Transport phenomena – One speed and one dimension – Thermal conductivity – Brownian motion – Langevin's theory – Molecular diameter	12	Text Book
V	Heat Capacities, Ising Model and Phase Transitions Heat capacities of heteronuclear diatomic gas – Heat capacities of homonuclear diatomic gas – One dimensional Ising model and its solution by variational method – Phase transitions and criterion for phase transitions – Classification of phase transitions by order and by symmetry – Phase diagrams for pure systems – Clausius Clapeyron equation	12	Text Book
Total		60

Semester - I							
CORE - III: CLASSICAL MECHANICS							
Semester	Course Code	Course Name	Category	L	T	P	Credits
I	26PYP1CC	CLASSICAL MECHANICS	CORE - III	48	-	-	4

Preamble	This course has been designed for students to learn and understand • The concepts of Lagrangian and Hamiltonian mechanics. • Apply the concepts of classical mechanics to the particle systems and rigid bodies. • Emphasize the mathematical formulation in relativity problems.
Prerequisite	Knowledge in Newtonian mechanics, Kinematics

Course Outcomes (Cos)		
CO Number	Course Outcomes (COs) Statement	Bloom's Taxonomy Knowledge Level
CO1	Apply the Lagrangian formulation for the motion of the particles.	K3
CO2	Construct the Hamilton's dynamics and experiment with variational principle.	K3
CO3	Outline the canonical transformations.	K4
CO4	Explain the dynamics of a rigid body in various aspects.	K5
CO5	Interpret the central force problem and theory of relativity.	K6

----------	---------------------

Syllabus

Unit	Content	Hrs	Resources
I	Lagrangian Dynamics Mechanics of system of particles - Coordinate systems - Configuration space - Constraints - Principle of virtual work - D'Alembert's principle - Hamilton's principle - Lagrange's equation - Conservation laws and Symmetry properties - Applications of the Lagrangian formulation: Single particle in space - Atwood's machine.	10	Text Book
II	Hamilton's Dynamics and Variational Principle Cyclic coordinates - Conservation theorem - Jacobi integral equation for Hamilton's principal function - Hamilton's equations - Hamilton's equations in different coordinate systems - Examples in Hamiltonian dynamics - Calculus of variation - Principle of least action.	10	Text Book
III	Classical Transformation and Poisson Brackets Canonical transformations - Legendre transformation - Generating functions - Procedure for application of canonical transformations - Condition for canonical transformation - Poisson brackets - Lagrange Brackets - Relation between Lagrange and Poisson brackets.	10	Text Book
IV	Dynamics of a Rigid Body Generalized coordinates of rigid body - Euler angle - Infinitesimal rotation as vectors - Components of angular velocity - Angular momentum - Inertia tensor - Moments of inertia for different body systems - Euler's equations of motion - Torque free motion of a rigid body.	09	Text Book
V	Central Force Problem and Theory of Relativity Reduction to the equivalent one body problem - Equation of motion and first integrals - Classification of orbits - Kepler problem: Motion under inverse square law - Artificial satellites - Virial theorem - Lorentz transformation - Consequences of Lorentz transformations.	09	Text Book
Total		48

----------	-----------------

S.No	List of Experiments
1	Build the Waveform generation by Digital Cathode ray Oscilloscope using OP-AMP
2	Construction of Hartley oscillator using OP-AMP
3	Construction of an Astable multivibrator using 555/Op-Amp
4	Construction of Differentiator, Integrator circuit to verify the output by Cathode ray Oscilloscope using OP-AMP
5	Construction of adder, subtractor, Sign Changer circuit using OP-AMP
6	Determine the shift of output voltage using Clipping and Clamping Circuits
7	Construct the Modulus counter using IC 7490
8	Construct the Phase Shift Oscillator
9	Construction of an active filter using Op-Amp
10	Study the frequency response of an Op-Amp
11	Assemble the serial and parallel sequential circuits using Shift Register
12	Determine the Analog to digital converter using Op-Amp

Note: Any 10 Experiments

Text Books	1.	Jones B K, 1986, "Electronics for Experimentation and research", Prentice- Hall.
	2.	Zbar P B., Malvino A P and Miller M A., 1994, "Basic Electronics: A text lab manual", Tata McGraw Hill, New Delhi.
Learning Method	Demonstration/ Hands on Experiments	
Focus of the Course	Skill Development/ Employability	

Semester – I DSE - I: ENERGY PHYSICS							
Semester	Course Code	Course Name	Category	L	T	P	Credits
I	26PYP1DA	ENERGY PHYSICS	DSE - I	48	-	-	4

Preamble	This course has been designed for students to learn and understand • The concept of energy resources • The types of renewable energy and production of biomass • The energy storage systems
Prerequisite	Knowledge on renewable energy resources

Course Outcomes (Cos)		
CO Number	Course Outcomes (COs) Statement	Bloom's Taxonomy Knowledge Level
CO1	Explain the energy sources and their importance	K2
CO2	Make use of the concept of hydro-power and wind power	K3
CO3	Categorize the energy from biomass, biofuels and geothermal	K4
CO4	Interpret the various sources of solar energy and photo synthesis	K5
CO5	Construct the energy systems, storage and transmission	K6

Mapping with Program Outcomes:					
Cos / POs	PO1	PO2	PO3	PO4	PO5
CO1	S	M	S	S	M
CO2	M	S	M	S	S
CO3	S	M	S	M	M
CO4	L	S	S	S	S
CO5	S	S	M	S	S

26PYP1DA	ENERGY PHYSICS
----------	----------------

Syllabus

Unit	Content	Hrs	Resources
I	Energy Sources Energy and sustainable development – Scientific principles of renewable energy - Properties of transparent materials - Heat transfer by mass transport – Multimode transfer and circuit analysis - Extraterrestrial solar radiation - Components of radiation - Effect of earth's atmosphere - Measurement of solar radiation. IKS: Varahmihira-Hydrology, Geology, Ecology	10	Text Book
II	Hydro-power and Wind power Assessing the resource for small installations – Reaction turbines - Hydroelectric systems - Turbine types and terms - Linear momentum and basic theory – Dynamic matching - Blade element theory - Characteristics of the wind - Power extraction by a turbine – Electricity generation - Mechanical power.	09	Text Book, Reference Book
III	Biomass, Biofuels and Geothermal energy Biofuel classification - Biomass production for energy farming - Direct combustion for heat – Pyrolysis (destructive distillation) - Alcoholic fermentation - Anaerobic digestion for biogas - Wastes and residues - Vegetable oils and biodiesel - Dry rock and hot aquifer analysis - Harnessing geothermal resources.	10	Text Book
IV	Solar Energy and Photo synthesis Air heaters - Water desalination - Solar ponds – Solar concentrators - Solar thermal electric power systems - Photon absorption at the junction - Solar radiation absorption - Maximizing cell efficiency - Solar cell construction - Types and adaptations of photovoltaics - Photovoltaic circuit properties – Thermodynamic considerations - Photosynthesis	10	Text Book, NPTEL
V	Energy systems, Storage and Transmission Biological storage - Chemical storage - Heat storage - Electrical storage: batteries and accumulators - Fuel cells - Mechanical storage - Distribution of energy – Electrical power – Socio political factors - Some policy tools.	09	Text Book
Total		48	

Note: Case studies related to the above topics to be discussed (Examined Internal only)

Text book	1.	E Book: John Twidell and Tony Weir, 2006, "Renewable Energy Resources", 2 nd Edition, Taylor & Francis Group.
	2.	Rai G D, "Solar Energy Utilization", 2014, Khanna Publishers, New Delhi
Reference Books	1.	Kothari D P, Singal K C, Rakesh Ranjan, 2014, "Renewable Energy Sources and Emerging Technologies", 2 nd Edition, PHI Learning (P) Ltd, New Delhi.

Semester – I							
DSE - I: MATERIALS PHYSICS AND PROCESSING TECHNIQUES							
Semester	Course Code	Course Name	Category	L	T	P	Credits
I	26PYP1DB	MATERIALS PHYSICS AND PROCESSING TECHNIQUES	DSE - I	48	-	-	4

Preamble	This course has been designed for students to learn and understand • The nucleation and growth techniques of crystals, thin films, and nanomaterials • The various plasma and vacuum processing techniques • The structural, morphology, and surface characterization techniques.
Prerequisite	Basic knowledge in Materials Science

Course Outcomes (Cos)		
CO Number	Course Outcomes (COs) Statement	Bloom's Taxonomy Knowledge Level
CO1	Experiment with the growth process of crystals.	K3
CO2	Differentiate the methods for plasma processing.	K4
CO3	Assess the important concepts of vacuum techniques.	K5
CO4	Explain the physical and chemical growth methods.	K6
CO5	Examine the various spectroscopic and microscopic characterization methods for materials.	K4

Mapping with Program Outcomes:					
Cos / POs	PO1	PO2	PO3	PO4	PO5
CO1	S	S	M	S	M
CO2	S	S	M	S	S
CO3	M	S	S	M	S
CO4	S	M	M	S	M
CO5	S	S	S	M	S

Syllabus

Unit	Content	Hrs	Resources
I	Crystal Growth and Nucleation Nucleation phenomena: Critical supersaturation - Homogeneous and heterogeneous nucleation - Nucleation on a substrate - Nucleation of a crystalline material - Surface nucleation - Vapor Liquid Solid mechanism of crystal growth - Gibbs's free energy - Chemical potential - Solubility curves - Bridgman - Stockbarger and related techniques - Czochralski and related techniques.	10	Text Book
II	Thermal Plasma Processing Advantages of plasma processing - Thermal plasmas - Principles of plasma generation - DC plasma torches - AC plasma torches - RF plasma torches - Plasma particle interaction - Plasma processing systems - Plasma spraying - Plasma reactors and furnaces - Plasma decomposition - Treatment of hazardous wastes.	10	Text Book
III	Vacuum Techniques Artificial vacuum - Natural vacuum - Applications of vacuum techniques - Calculation of vacuum systems - Vacuum pumps - Principles of pumping - Parameters and classifications - Mechanical pumps - Vapour pumps - Ion pumps - Classification and selection of vacuum gauges - Thermal conductivity gauges - Pirani gauge.	09	Text Book
IV	Growth Technique of Thin films and Nanomaterials Thermal Evaporation: RF heating - Electron bombardment heating - Cathodic sputtering: Glow discharge sputtering - Reactive sputtering - Physical vapor Deposition - Chemical vapor Deposition - Sol Gel Technique - Hydrothermal growth - Combustion synthesis.	09	Text Book
V	Characterization Tools Working principles and instrumentation: X-Ray diffraction - Raman spectroscopy - UV-Vis spectroscopy - Photoluminescence spectroscopy - Fourier transform infrared spectroscopy - Scanning electron microscopy - Transmission electron microscopy - Scanning probe microscopy.	10	Text Book
Total		48

Semester - I							
DSE - I: LASER PHYSICS AND NONLINEAR OPTICS							
Semester	Course Code	Course Name	Category	L	T	P	Credits
I	26PYP1DC	LASER PHYSICS AND NONLINEAR OPTICS	DSE - I	48	-	-	4

Preamble	This course has been designed for students to learn and understand • The type of lasers, and their characteristics. • The applications of lasers in industry and medicine. • The theory and applications of non- linear optics.
Prerequisite	Knowledge in Optics and Spectroscopy

Course Outcomes (Cos)		
CO Number	Course Outcomes (COs) Statement	Bloom's Taxonomy Knowledge Level
CO1	Explain the principle and construction of various lasers.	K2
CO2	Identify the features of lasers.	K2
CO3	Design the characteristics of LASER in various industrial and medical applications	K6
CO4	Categorize concepts of nonlinear optics in higher order harmonic generations.	K4
CO5	Evaluate the nonlinear optical interactions and make use in various applications.	K5

Mapping with Program Outcomes:					
Cos / POs	PO1	PO2	PO3	PO4	PO5
CO1	M	S	M	S	M
CO2	S	S	S	S	S

26PYP1DC	LASER PHYSICS AND NONLINEAR OPTICS
----------	------------------------------------

Syllabus

Unit	Content	Hrs	Resources
I	Lasers Fundamentals and Types Principle of laser - Absorption process - Emission process - Characteristics of laser - Einstein relation - Laser operation - Population inversion and derivation of threshold gain - Gain medium - Optical feedback - Active medium - Laser types - He Ne laser - CO ₂ laser - Nd:YAG laser- Semiconductor laser - Liquid dye laser.	10	Text Book
II	Laser Characteristics Threshold conditions - Line shape function with Doppler broadening - Population inversion and pumping threshold - High intensity laser - Laser modes and mode locking - Mode locking method - Q switching and techniques - Frequency stabilization.	9	Text Book
III	Laser Applications Industry - Medical application of laser - Safety aspects in laser usage - Laser Doppler velocity meter - Laser strain gauges - Holography: Operating principle - Construction and reconstruction of hologram - Simplified theory of holography - Holographic memory - Laser machining processes - Laser spectroscopy.	9	Text Book
IV	Introduction to Nonlinear Optics Introduction to nonlinear optics - Descriptions of nonlinear optical processes - Second harmonic generation - Optical parametric oscillation - Third-order nonlinear optical processes - Third-harmonic generation - Nonlinear susceptibility - Properties of the nonlinear susceptibility.	10	Text Book
V	Nonlinear Optical Interactions The wave equation for nonlinear optical media - Phase matching - Quasi-phase matching - The Manley Rowe relations - Sum frequency generation - Difference frequency generation and parametric amplification - Nonlinear optical interactions with focused Gaussian beams.	10	Text Book
Total		48	

Note: Case studies related to the above topics to be discussed (Examined Internal only)
